SHOPFRONT SIGNAGE

# The orange window, on the street

The shopfront is the brand's oldest idea: a thick Sunset frame on warm black. The fascia carries that frame above the door, the blade sign catches people walking along the pavement, and the window and door repeat it at eye level. Two colours only, the Mark and the name, no leaves and no product words outside.

Mock-up of a 6 m street front at night. The fascia and blade sign are lit; the window poster sits behind the glass.

## Fascia, 4,800 × 900 mm (street front)

Black aluminium composite panel (3 mm ACM). The frame is 40 mm Sunset LED neon flex; the Mark and lettering are built-up channel letters, 50 mm deep, Sunset acrylic faces, face-lit (warm white LEDs behind Sunset acrylic). Lit dusk to 22:00 on a timer.

## Before anything goes up

- **Permission.** Lit and projecting signs need the municipality's signage approval (eThekwini for Hillcrest, uMngeni for Hilton) and the landlord's consent; in a mall, the centre's signage criteria decide size and lighting. Send them these drawings.
- **Colour.** Match Sunset #F5913C on the lit face, not on the unlit acrylic; ask for a lit sample before production. Ink #0C0A09 for panels and returns.
- **Nothing about the product outside.** No leaves, no product names, prices or health words on the shopfront. The name, the Mark, the tagline, the hours and "Members only · Adults 18+".
- **Files.** Lettering is already outlined; the Mark is drawn as strokes: Outline Stroke before routing. Artwork is at 1:1 in millimetres.
- **Per store door vinyl:** `npx tsx --env-file=.env scripts/signage-art.tsx STORECODE` (the store code from HQ → Stores) writes its door vinyl with its name and hours from the platform.
