1 About this guide and who does what 5
- 1.1 How to use this guide 6
- 1.2 The nine surfaces 6
- 1.3 Who does what: roles and scope 6

2 Getting in: addresses, sign-in and installing the apps 8
- 2.1 Addresses 9
- 2.2 Staff sign-in: email, password and the forced first change 9
- 2.3 The till: pairing a device, then a PIN 10
- 2.4 Members: a code by SMS, no passwords 10
- 2.5 Demo mode 11
- 2.6 Installing the apps on Android, iPhone and desktop 11

3 The online shop and Herbal Holland Rewards 12
- 3.1 Joining: the 18+ check, membership terms and consents 13
- 3.2 Browsing: home, categories, moods, search and product pages 14
- 3.3 The bag and checkout: collect, same-day or courier; pay online or when you collect 17
- 3.4 Order tracking and tax invoices 19
- 3.5 Help, support tickets and returns 20
- 3.6 Herbal Holland Rewards: card, tiers, instant prices and points 22
- 3.7 My Deals, referrals, share cards, drops, events and quests 23
- 3.8 Buy again, wishlist and reorder reminders 25
- 3.9 Gift vouchers 26
- 3.10 Patient authorisation (Section 21) 27
- 3.11 Settings, consents and your data 28
- 3.12 Returns, delivery, privacy and terms 29

4 The till (point of sale) 30
- 4.1 The screen at a glance 31
- 4.2 Shifts and cash: opening the float, X-report and Z-report 31
- 4.3 Selling: search, scan, members and age checks 32
- 4.4 Licensed dispensing: patients, quantities and the authorised dispenser 33
- 4.5 Taking payment: tenders, split payments and points 33
- 4.6 Refunds 35
- 4.7 Online orders: picking, handover with an ID check, dispatch 35
- 4.8 Event check-in and welcome gifts 36
- 4.9 Offline mode and sync 36
- 4.10 Till hardware: receipt printer, cash drawer, scanners and the customer display 37
- 4.11 Training mode and quiet hours 38
- 4.12 Stock lookup, commission and the menu board 39

5 The store back office 40
- 5.1 Overview: the Today list, the store dashboard, and "All my stores" 41
- 5.2 Online orders 42
- 5.3 Support tickets and returns 42
- 5.4 Inventory: stock on hand, stock takes, adjustments, batches and recalls 43
- 5.5 Buying: purchasing from the DC, network trading, and your prices 45
- 5.6 Members, the patient register, local marketing and events 46
- 5.7 Money: finance, cash-ups, banking, expenses, commission and the statement 48
- 5.8 Insight: reports and loss prevention 49
- 5.9 Store: team and PINs, HQ updates, the menu board, settings 49
- 5.10 Working faster: lists, saved views, keyboard shortcuts and editing in place 50

6 The HQ console 52
- 6.1 Network overview 53
- 6.2 Stores, regions and companies 54
- 6.3 Franchise leads 54
- 6.4 Catalogue: products, variants, ranging, categories and import 55
- 6.5 Batches and recalls 56
- 6.6 Pricing: price lists, tier prices and the rules 57
- 6.7 Promotions 57
- 6.8 Distribution and online orders 58
- 6.9 Support and returns across the network 58
- 6.10 Members and CRM 59
- 6.11 Campaigns, the do-not-contact list and social posting 60
- 6.12 Messages: every SMS, email and push the platform sent 62
- 6.13 Rewards settings and My Deals 62

6.14 The launch programme: Founding Members, drops and events 62
6.15 Money: finance, statements and commission 62
6.16 Reports and exports 63
6.17 Governance: loss prevention, compliance, audit log, announcements and team 64

7 Trade: selling to businesses 66
7.1 Who trade customers are, and what they can buy 67
7.2 Applying, and approval 68
7.3 The trade portal: range, cart and checkout 72
7.4 HQ: accounts 75
7.5 HQ: the ledger (payments, credit notes, adjustments, statements and holds) 77
7.6 HQ: orders (confirm the EFT, pick, ship, short-ship, cancel) 78
7.7 The store: trade click & collect orders 79
7.8 The till: trade-sale mode 80
7.9 Finance: how trade money flows 81
7.10 Reports 81
7.11 Settings and jobs 82

D What's still to be decided 114

1

CHAPTER 1

About this guide, and who does what

How to use this manual, the **nine surfaces** of the platform, and the **roles** (from a dispenser at the till to the HQ administrator), with what each can see and do.

IN THIS CHAPTER

1.1 How to use this guide

1.2 The nine surfaces

1.3 Who does what: roles and scope

1.1 How to use this guide

This is the reference manual for the Herbal Holland platform: one Next.js application that runs the shop, the Rewards app, every till, every store's back office and the HQ console, plus the separate corporate website at herbalholland.com. It describes what the software *does* as built, not what was planned.

The guide was written from the code itself (every screen, action and rule), the project documentation, and screenshots taken from the automated test journeys against the seeded demo network. Where the documentation and the code differ, the code wins; a footnote says so where it matters to you.

- **Read chapter 2 first** if you are new: it explains how everyone gets in, and how to install the three apps.
- **Members and patients** live in chapter 3. Store teams should read it too: it is what your members see.
- **Dispensers and cashiers** need chapter 4 (the till) and the compliance rules in chapter 10.
- **Store managers and franchisees** need chapters 4, 5, 10 and 11.
- **Owners and their accountants** keep the books in chapter 12.
- **HQ staff and area managers** need chapters 6 to 12.
- The appendices hold the demo logins, the catalogue import columns, a glossary and the open decisions.

Procedures are written as numbered steps in the second person ("Tap **Charge**"). Rules the software enforces are set out in orange callouts; things that can go wrong, in amber ones. Money is in rand; retail prices include VAT; wholesale prices and costs exclude it. Times are South African (SAST). We say *members*, never customers, and everything is for **adults 18+**.

> **A WORD ON THE DEMO**
> Screenshots come from the demo network (24 stores, about 18,000 members, 60 days of trading) with `DEMO_MODE=true`: names, numbers and prices are made up, payments are simulated, and one-click logins exist that a live system must never have. Chapter 11 says how production differs.

1.2 The nine surfaces

Everything shares one database and one set of rules, so a sale, a stock movement or a Rewards point means the same thing everywhere.

Surface	Address	Who uses it	Look and feel
Online shop and Herbal Holland Rewards	`/` and `/…` · `/cart` · `/checkout` · `/login` · `/patients/…` · `/orders/…`	Members, patients and the public (adults 18+)	Dark, branded surfaces; installs as the Rewards app on a phone
The till (POS)	`/pos` · `/pos/pair` · `/pos/display`	Member advisors (cashiers), dispensers, managers	Dark, touch-first, offline-first; installs full-screen on Android
Store back office	`/store/<code>/…`	Store managers, franchise owners (area managers and HQ can open any store in their scope)	Light content, dark sidebar; installs as "HH Office"
HQ console	`/hq/…`	HQ administrators, HQ team, area managers	Light content, dark sidebar
The books (accounting)	`/books` · `/books/<company>/…`	Owners, their accountants, HQ administrators, area managers (read-only)	Light content, dark sidebar; print-ready reports
Trade portal (Herbal Holland Trade)	`/trade` · `/trade/apply` · `/trade/login` · `/trade/orders` · `/trade/range` · `/trade/…`	Trade buyers: pharmacies, independent retailers, cafés, wellness practices, online shops (adults 18+)	Dark, branded surfaces like the shop, with a "Trade" badge; trade-only email and password sign-in (chapter 7)
Menu board	`/menu/<store-slug>`	A TV in each store	Dark, 16:9, rotates on its own
Public documents	`/invoice/<id>?t=…` · `/batch/<code>` · `/legal/…`	Anyone with the link	Print-friendly tax invoices; lab certificates; opt-out; policies
herbalholland.com	`herbalholland.com/…` (about, stores, press, careers, contact, privacy, terms, POPIA)	The public and journalists	Its own static site, not part of the application (chapter 8)

There is also a brand book at `/brand` (logo, colour, type, shapes, art, voice, misuse and the merch specifications) for marketing and partners, and a reports centre inside both the back office and HQ (`/store/<code>/reports`, `/hq/reports`).

1.3 Who does what: roles and scope

Staff accounts carry one of six roles. The role decides the **scope** (which stores' data a person can see) and what they may change. Pages *and* the actions behind them re-check both on every request, so a crafted link can't reach another franchisee's data, and a franchisee never sees another franchisee's shelf prices.

Role	Scope	Signs in at	Can do
HQ administrator	The whole network	`/login` › HQ console	Everything, including compliance settings, franchise fees, HQ team and POPIA requests (anonymising a member, deleting a lead). The only role that may switch THC mode or change licences.
HQ team (staff)	The whole network	`/login` › HQ console	Catalogue, batches, pricing, promotions, campaigns and social posts, distribution, online orders, members, drops, events, finance and statements, reports. Sees franchise leads. Cannot change compliance settings or fees.
Area manager	One region	`/login` › HQ console (their region only)	The same console limited to their region's stores, members and orders, whatever the URL asks for; prepares campaign *drafts* for HQ to send; verifies deposits and works loss-prevention alerts for their region; opens any store back office in the region.

Role	Scope	Signs in at	Can do
Owner (franchisee)	Every store their company owns	`/login` › "All my stores" when they own more than one	Runs each store's back office; the only role that can add managers, change a manager's PIN or card, authorise dispensers, switch commission on and approve it for payroll, and verify banking deposits. Consolidated dashboard, comparison and CSV across their stores.
Accountant	One company's books	`/login` › the company's books	Keeps the books (chapter 12): reports, banking, journals as drafts for the owner to approve. No store screens, no till.
Store manager	One store	`/login` › their store; also the till with a PIN	Everything in the store back office (orders, stock, buying, members, patients, money, team, settings) except what is reserved for the owner; pairs and unpairs tills; closes shifts.
Member advisor (cashier / dispenser)	One store	The till, with a PIN	Sells, refunds, hands over online orders, checks in event guests, counts the float. A member advisor with **Authorised dispenser** ticked may complete sales of licensed medicines. No back-office login (the sign-in page sends them to the till).

Three more kinds of people use the platform without a staff account:

Member Anyone 18 or older who has joined Herbal Holland Rewards with their mobile number. We sell to members only, online and at the till; joining is free and takes about a minute (chapter 3).

Patient A member with an active SAHPRA Section 21 authorisation on file, registered by a dispenser in a store. Only patients can see and buy licensed (THC) medicines, and only in store from an authorised dispenser.

Trade buyer A person who orders for a business with a trade account: an owner (who also manages the account and its buyers) or a buyer. They sign in to the trade portal with a code sent to their email, buy at ex-VAT trade prices in whole cases, and never licensed medicines (chapter 7).

Which surface each role uses

Role	Shop & Rewards	Till	Store back office	HQ console	Menu board	herbalholland.com
Member / patient	**Yes**	—	—	—	sees it	**Yes**
Member advisor / dispenser	as a member	**Yes**	—	—	runs it	—
Store manager	as a member	**Yes**	**Yes**	—	runs it	—
Owner	as a member	can pair tills	**Yes, all their stores**	—	—	—
Area manager	—	can pair tills	**Yes, their region**	**Yes, their region**	—	—
HQ team / administrator	—	can pair tills	**Yes, any store**	**Yes**	—	edits copy and facts; works the leads

> **RULE**
> Every sensitive action (a sale exception, a price change, a stock take, a recall, a consent change, a setting, a login) is written to the audit log with who, what, where and when. Entries can't be edited or deleted. HQ reads the whole log; area managers read their region's (chapter 6).

2

CHAPTER 2

Getting in: addresses, sign-in and installing the apps

Staff sign in with a **work email and password**; a till is **paired once** and then unlocked with a **PIN**; members sign in with a **code sent by SMS**. All three apps install straight from the browser.

IN THIS CHAPTER

2.1 Addresses

2.2 Staff sign-in: email, password and the forced first change

2.3 The till: pairing a device, then a PIN

2.4 Members: a code by SMS, no passwords

2.5 Demo mode

2.6 Installing the apps on Android, iPhone and desktop

2.1 Addresses

The application lives at one public address (`APP_URL` : in production the shop's domain, for example `https://shop.herbalholland.com` or `https://herbalholland.co.za`; locally `http://localhost:3000`). Everything below is a path on that address.

You want to...	Go to
Shop, or open your Rewards card	`/` · `/club`
Buy a gift voucher, or check one's balance	`/gift` · `/gift?check=CODE`
Join Rewards (also from a store QR code or a friend's link)	`/club/join` · `/club/join?store=PTA01` · `/club/join?ref=CODE`
Sign in to the back office or HQ	`/login`
Open the till	`/pos` (first time on a device: `/pos/pair`)
A customer-facing screen for a till	`/pos/display` (opened from Shift › This till › Customer display)
Your store's back office	`/store/<store code>` (e.g. `/store/PTA01`; `/store` alone sends you to your own home)
HQ console	`/hq`
Apply for a trade account, or sign in to the trade portal	`/trade/apply` · `/trade/login` (the landing page is `/trade`; the terms are at `/trade/terms`)
The trade portal once signed in	`/trade/range` · `/trade/cart` · `/trade/checkout` · `/trade/orders` · `/trade/statements` · `/trade/account`
Trade in HQ, and a store's trade orders	`/hq/trade` · `/hq/trade/accounts` · `/hq/trade/orders` · `/store/<code>/trade`
The menu board for a store TV	`/menu/<store slug>` (e.g. `/menu/hatfield`)
Change your password	`/account/password`
Sign out of the back office	`/logout` (the sign-out button in the sidebar)
The corporate website	`https://herbalholland.com`

2.2 Staff sign-in: email, password and the forced first change

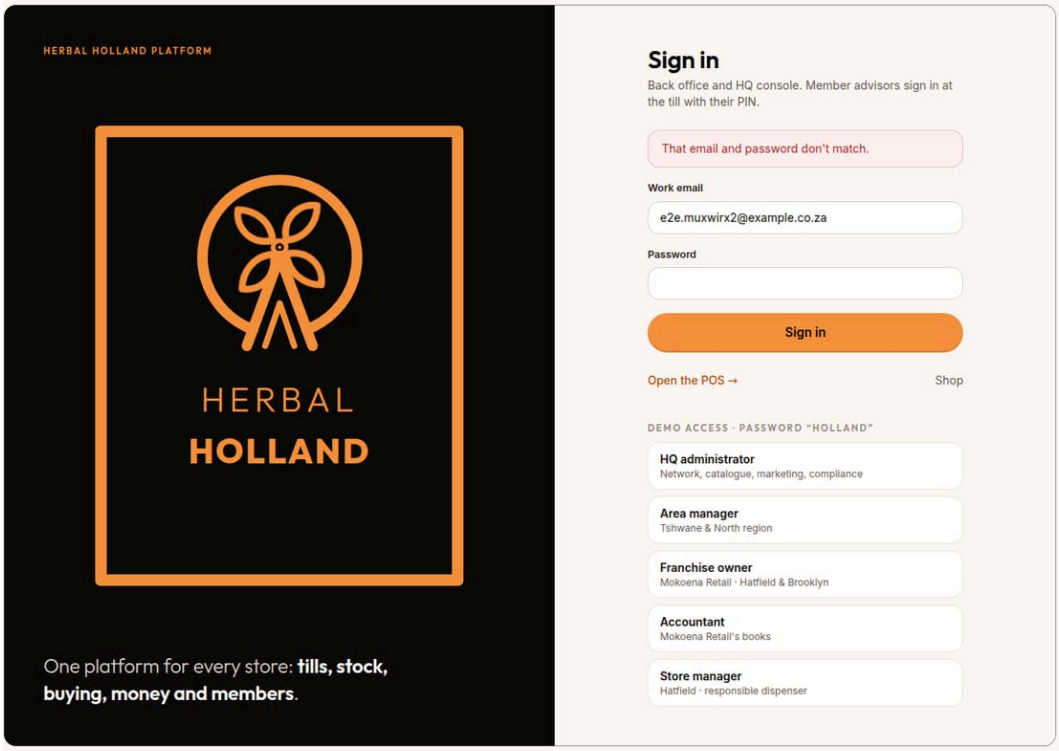

Figure 2.1 **The sign-in page.** Work email and password; a wrong pair shows "That email and password don't match". In demo mode the one-click role logins appear underneath.

1. Open `/login`, enter your **work email** and **password**, and press **Sign in**.
2. You land where your role lives: HQ roles on the HQ console, a store manager on their store, an owner on *All my stores* (or their single store), a member advisor on the till.
3. If you were given a **temporary password** (every new HQ person and owner, and staff whose password a manager or owner set or reset), the platform sends you to `/account/password` before anything else. Enter the current password, then type a new one twice: **at least 10 characters**, not a common password, and without your name or email. Changing it signs you out of every other device. A temporary password stops working after **72 hours**: ask HQ (or your store owner) for a new one.
4. Eight wrong passwords in a row lock password sign-in for 15 minutes (a reset by HQ or your owner lifts it), and a back-office session ends after 12 hours without use.

LOCK-OUTS AND SESSIONS

- Eight wrong attempts on one email lock that email for **15 minutes**.
- A back-office session lasts **7 days**; sign out on shared computers.
- A deactivated account can't sign in at all, and a person can never deactivate themselves; there must always be at least one active HQ administrator.
- "Your account doesn't have access to that page" means the page is outside your scope, not that your password is wrong.

Passwords are never stored in clear; sessions are random tokens kept only as hashes in secure, HTTP-only cookies. Every login (and every demo login) is written to the audit log.

2.3 The till: pairing a device, then a PIN

A till is any phone, tablet or computer with Chrome. It is **paired to a store once**; after that, staff unlock it with a personal PIN, and it keeps selling cash even when the connection drops.

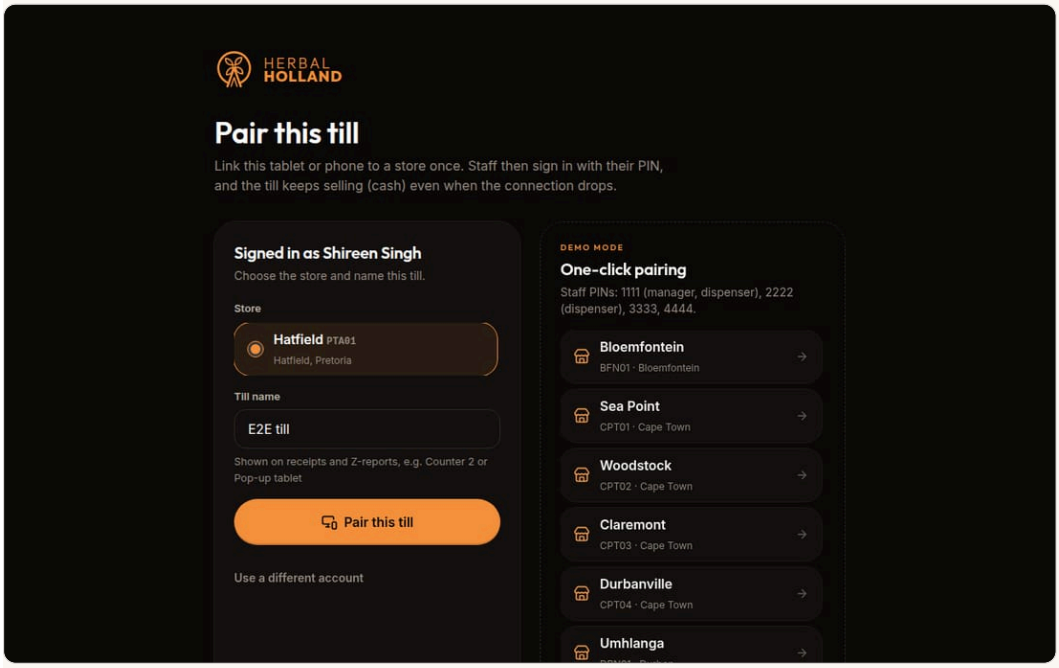

Figure 2.2 **Pair this till.** A manager signs in, picks the store and names the till. In demo mode a one-click list of stores appears on the right with the demo PINs.

Pairing (once per device)

1. On the device, open `/pos/pair`. If you are on Android, accept **Install the till app** first (it is optional, but the installed app opens full-screen and keeps its shell offline).
2. Sign in with a **store manager, owner, area manager or HQ** email and password (or, if that person is already signed in to the back office on this browser, they are recognised).
3. Choose the **store** (only trading stores you may pair are listed) and give the till a **name** of up to 40 characters, such as "Counter 2" or "Pop-up tablet". The name appears on receipts and Z-reports.
4. Press **Pair this till**. The device gets a letter (A, B, C…) that prefixes its receipt numbers, and a pairing that lasts a year. `PTA01-B00042` means store PTA01, till B, sale 42.

Unlocking with a PIN (every shift)

1. Tap your **name** on the lock screen, then enter your **4-digit PIN**.
2. The till stays unlocked for you for **12 hours**, but locks after **5 minutes idle**; tap **Lock** when you walk away. Tap your name and re-enter the PIN to carry on; your basket is kept.
3. Offline, the till still unlocks for anyone who signed in on it during the last 12 hours (it keeps a scrambled check of the PIN, never the PIN itself).
4. Five wrong PINs lock you out of every till for 5 minutes; ten in a day switch your PIN off ("Your PIN is locked. Ask a manager to reset it") until a manager sets a new one in Team.
5. When a sale needs a different person (an authorised dispenser for a licensed medicine, or a manager), the till asks that person to unlock instead; the basket is kept.

PINs are set by the store manager or owner in the back office (Team). They must be 4 digits with no repeated or running digits, and are handed over in person. Only a store manager can **unpair** a till (Shift › This till), and only with no shift open; unpairing wipes the till's cached data (sales waiting to sync are kept).

2.4 Members: a code by SMS, no passwords

Members never have a password. Anywhere the shop needs to know who you are (the Rewards card, checkout, a drop, an event), it asks for your **South African mobile number** and sends a **6-digit code** by SMS.

1. Enter your mobile number (any format; it is stored as +27…). Press **Send my code**.

2. Type the code from the SMS (phones can autofill it). It expires after **10 minutes**; you get **5 tries** per code and at most **5 codes in 10 minutes**.
3. If the number is already a member, you are signed in for **30 days** on that device. If not, one short step completes your membership (chapter 3).

If the SMS can't be sent, the shop says so and asks you to try again in a minute. It never pretends a code went out. Sign out from Rewards › Settings.

2.5 Demo mode

With `DEMO_MODE=true` (local, staging and the demo, but **never production**):

- `/login` shows one-click logins for four roles; the password for every seeded person is `holland`. Appendix A lists them.
- `/api/auth/demo?email=…&next=/hq` signs in a seeded user directly (used by screenshots and smoke tests).
- The pair screen offers **one-click pairing** to any store, and the demo PINs are `1111` (a manager who is also a dispenser), `2222` (a dispenser), `3333` and `4444`.
- Member sign-in shows the SMS code **on screen**.
- Payments are simulated (chapter 9) and no messages leave the system: every SMS and email is only logged.

> **WARNING**
> Production must run with `DEMO_MODE=false`, a strong `SESSION_SECRET`, a `CRON_SECRET` of 32+ characters and an https `APP_URL`: without them the server won't serve (every request answers 500 and the log says why). The launch checklist in chapter 11 repeats this because it matters.

2.6 Installing the apps on Android, iPhone and desktop

All three web apps install straight from the browser, with no app store and nothing sent to the server about installs. Each has its own icon and opens in its own window.[1]

App	Where the nudge shows	Opens at	Notes
Herbal Holland Rewards (members)	The Rewards home (`/club`), under the card ("Add Herbal Holland to your home screen"), and once on the shop home for signed-in members	The member's card	Portrait; shortcuts to the card, drops, shop, orders and stores; app notifications need it on the home screen on iPhone (iOS 16.4+)
Herbal Holland Till	The pair screen before pairing ("Install the till app"), and Shift › This till	`/pos`, full-screen	Keeps its shell offline through a service worker; "Not now" hides the nudge for a day
Herbal Holland Back office (store + HQ)	The mobile header, and "Install app" in the side menu	`/store`, which sends each person to their own home by role	For managers, owners, area managers and HQ on a phone or a computer

Android	In Chrome, Edge or Samsung Internet, tap **Install** on the nudge and the browser's own install sheet opens. It is also in the browser menu ("Install app" / "Add to Home screen").
iPhone and iPad	Safari only. The nudge shows the two steps: **Share**, then **Add to Home Screen**. Chrome, Firefox and in-app browsers (WhatsApp, Instagram, Facebook…) on iOS can't add web apps, so nothing is shown there: open the link in Safari.
Desktop	Chrome and Edge show an install icon in the address bar and the nudge reads "Install … on this computer". Handy for the back office and HQ.
Dismissing	The X on a nudge hides it on that device for 30 days ("Not now" on a till: one day). An installed app never shows the nudge.

1. The install prompts and the three manifests (`/manifest.webmanifest`, `/pos/manifest.webmanifest`, `/staff/manifest.webmanifest`) are part of the platform; the rules live in `src/lib/install.ts` and the component in `src/components/ui/install-prompt.tsx`. If a nudge doesn't appear on a device, the platform, the browser or a recent dismissal is the reason, not a fault.

3

CHAPTER 3

The online shop and Herbal Holland Rewards

One national shop for the whole network, and one free membership that works in every store and online. **Members pay less instantly**, earn points worth R1 each, and see exactly what is in every batch.

IN THIS CHAPTER

3.1 Joining: the 18+ check, membership terms and consents

3.2 Browsing: home, categories, moods, search and product pages

3.3 The bag and checkout: collect, same-day or courier; pay online or when you collect

3.4 Order tracking and tax invoices

3.5 Help, support tickets and returns

3.6 Herbal Holland Rewards: card, tiers, instant prices and points

3.7 My Deals, referrals, share cards, drops, events and quests

3.8 Buy again, wishlist and reorder reminders

3.9 Gift vouchers

3.10 Patient authorisation (Section 21)

3.11 Settings, consents and your data

3.12 Returns, delivery, privacy and terms

3.1 Joining: the 18+ check, membership terms and consents

We sell to members only, and only to adults. Joining is free, takes about a minute, and needs no password and no plastic: the card lives on the member's phone.

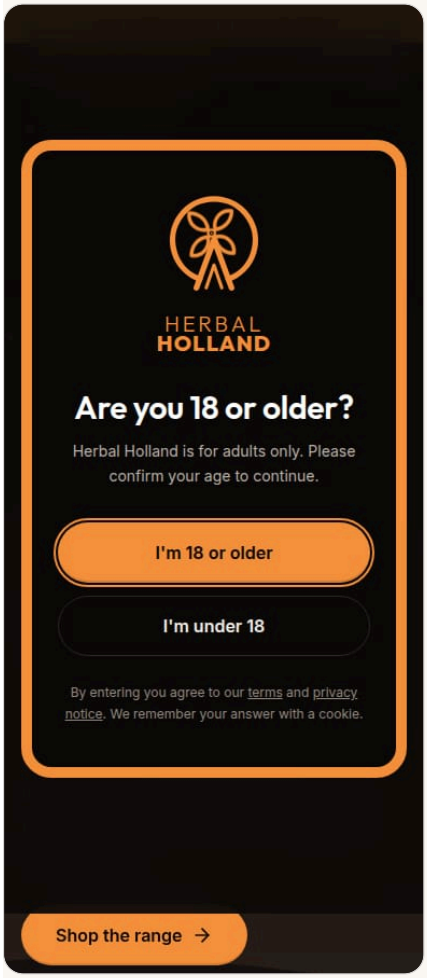

Figure 3.1 **The age gate.** "Are you 18 or older?" is the first thing a new visitor sees; the answer is remembered on the device. Under-18s can't enter.

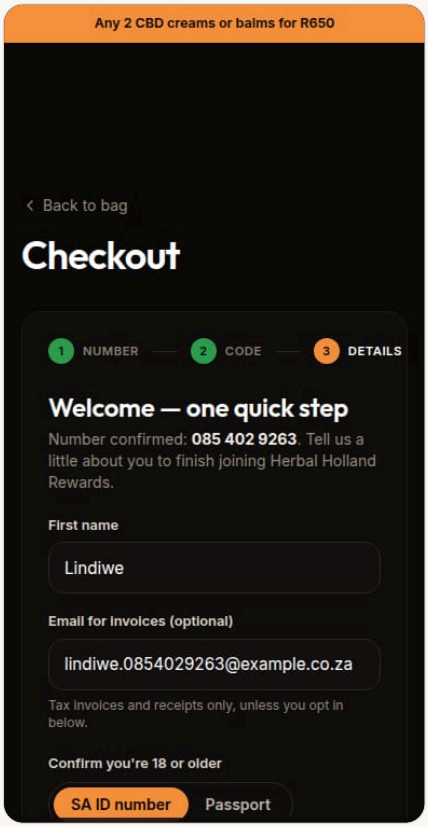

Figure 3.2 **One quick step.** After the SMS code: first name, an optional email for invoices, and the 18+ check by SA ID number or passport.

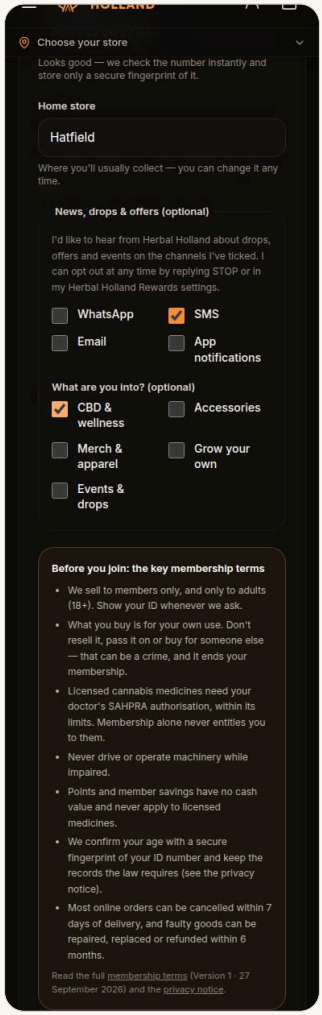

Figure 3.3 **Consents and key terms.** Home store, marketing consent per channel (all unticked by default), optional interests, and the key membership terms before acceptance.

1. Confirm your **mobile number** with the code sent by SMS (chapter 2). A number that is already a member is simply signed in.
2. **First name** (required) and an **email** for tax invoices (optional: invoices and receipts are emailed after every purchase if you give one; marketing email only if you also tick it).
3. Confirm you are 18 or older with your **SA ID number**, which is checked instantly (format, checksum, date of birth, 18+) and stored only as a secure fingerprint plus the last four digits. *Or* choose **Passport** and enter your date of birth; passport holders show their document at a store on their first visit, and until then can't order age-restricted items online.
4. Choose your **home store** (where you usually collect; a store that is opening soon can be chosen too).
5. **News, drops & offers**: tick the channels you're happy to hear on: WhatsApp, SMS, email, app notifications. Nothing is ticked for you. The exact wording you saw is stored with your answer.
6. Optionally say what you're into (CBD & wellness, accessories, merch & apparel, grow your own, events & drops) so deals are relevant. Licensed medicines are never an interest.
7. Read the **key membership terms** and accept the membership terms and privacy notice. Joining is refused without acceptance; the version you accepted (Version 1 · 27 September 2026) and the time are recorded on your membership.

You then have a member number (`HH0100001` style), a referral code, **25 welcome points**, and Seed prices from your first basket. Members can also be signed up at the till in about 20 seconds (chapter 4) or in the back office (chapter 5). The same rules apply, and staff must ask the scripted consent question.

THE KEY TERMS EVERY MEMBER ACCEPTS

- We sell to members only, and only to adults (18+). Show your ID whenever we ask.
- What you buy is for your own use. Don't resell it, pass it on or buy for someone else. That can be a crime, and it ends your membership.
- Licensed cannabis medicines need your doctor's SAHPRA authorisation, within its limits. Membership alone never entitles you to them.
- Never drive or operate machinery while impaired.
- Points and member savings have no cash value and never apply to licensed medicines.
- We confirm your age with a secure fingerprint of your ID number and keep the records the law requires.
- Most online orders can be cancelled within 7 days of delivery, and faulty goods can be repaired, replaced or refunded within 6 months.

3.2 Browsing: home, categories, moods, search and product pages

The home page opens under the same sky as herbalholland.com (the KwaZulu-Natal hills, the stars and the windmill), with the wordmark in its window frame, "Dutch heritage. African soil.", **Shop the range** and **Your Rewards card**, and three live numbers (stores nationwide, lab-tested batches, welcome points); while the Founding Members list is open the hero tells that story instead. Then, in order: four promises (Lab-tested, every batch · Batch-traceable · Click & collect · Nationwide delivery), **Windmill Days** (the next events and the current drop), **New in** ("Just landed": the newest products, each with its batch certificate from day one), the **Founding Members** panel while the list is open and the **Gift vouchers** panel ("Give the gift of choice."), **Shop by mood** ("How do you want to feel?"), **Shop by category** (one beadwork-edged card per category with its product count, plus the Dispensary card for registered patients), **Featured this week** (staff picks), the heritage story ("Four landraces. One fair promise."), the Rewards panel ("Pay less. Earn more."), **Find us** with your store, and the Learn guides. A store picker in the header sets your store: it shows whether the store is open now, drives what "in stock at your store" means, and loads the full store list only when opened, so the pages stay light at a thousand stores.

Figure 3.4 **Home.** The sky over the hills, the wordmark in its frame, "Dutch heritage. African soil.", Shop the range and Your Rewards card, and the live numbers: stores nationwide, lab-tested batches, welcome points.

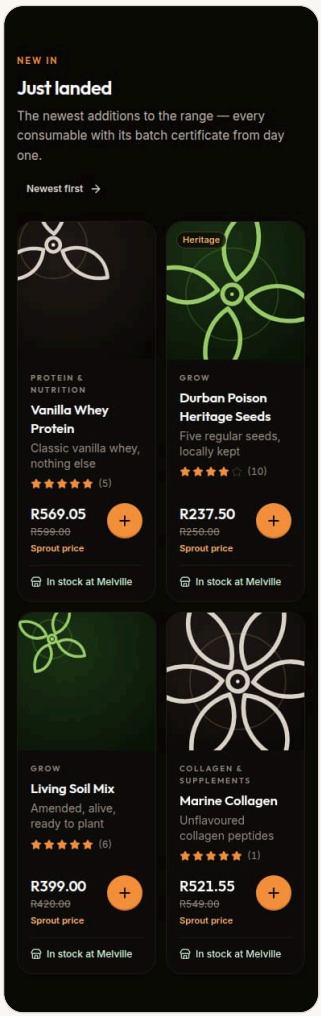

Figure 3.5 **New in · Just landed.** The newest products as the same cards the shop uses everywhere: category, name, rating, price and member price, "In stock at Melville", add to bag.

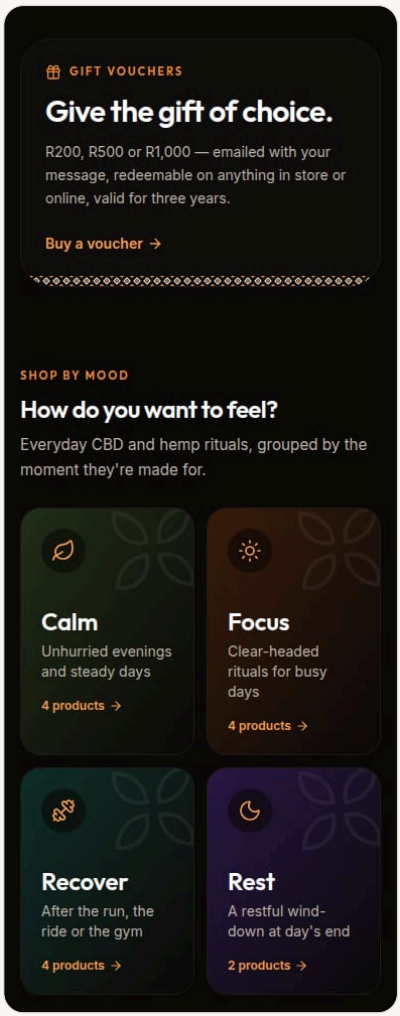

Figure 3.6 **Gift vouchers, then moods.** "Give the gift of choice." leads to `/gift`; "How do you want to feel?" groups everyday rituals by the moment they're made for.

A category page opens with the same sky, the category's name and line and the search box, then the category chips with their counts, **Mood, price & sort**, the active filters as chips, and a **Why {category}** block: the category's line as its heading, one plain sentence per product class in it (approved facts, never a health claim), the lab-tested reminder, and four tiles: products, prices from and to, the stores you can collect from, and a *Read first* door to the Learn guide for that category.

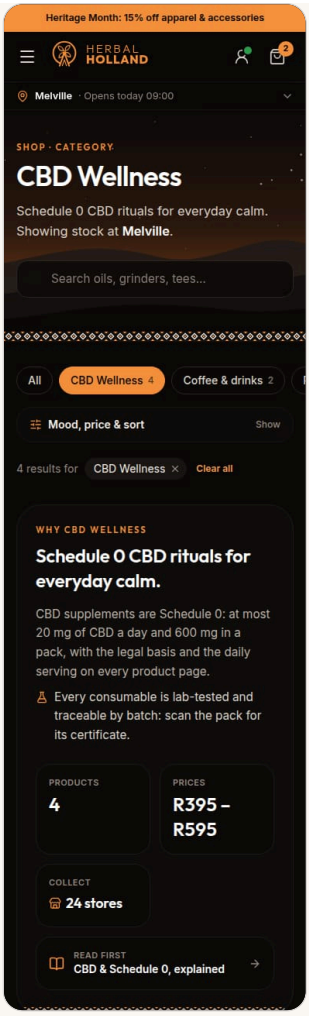

Figure 3.7 **A category** (CBD Wellness): the sky hero with the category's line and the search box, the chips, *Mood, price & sort*, and the "Why CBD wellness" block with its facts and tiles.

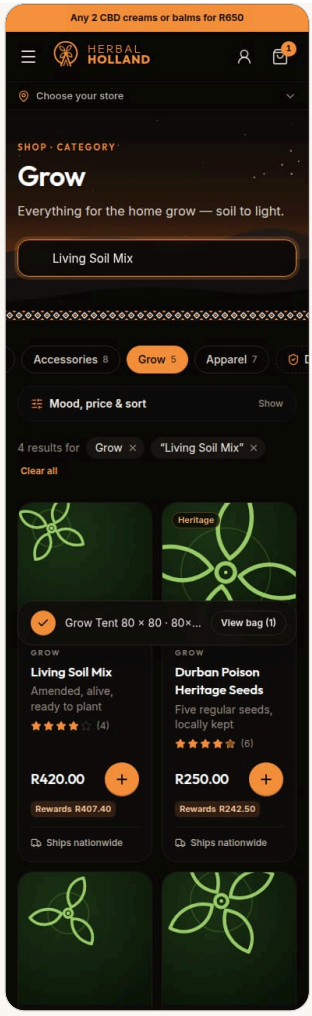

Figure 3.8 **Search.** Results by name; the active filters are shown as chips you can clear.

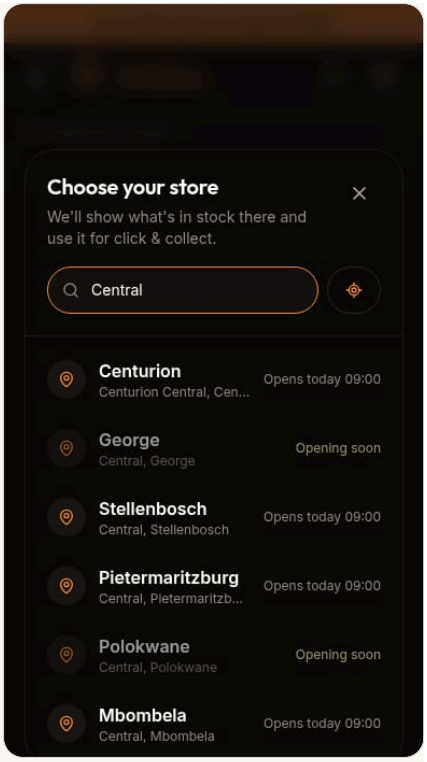

Figure 3.9 **Choose your store.** Search a town or store; the header shows whether it is open now.

`/shop` takes `category`, `mood`, `q` (search), `min` / `max` price, `sort` and `page`. Categories are ordered by HQ; a category only shows to members once it has an active product. Every list is paginated.

The product page

A product page is built to sell honestly: the pictures, the price and the facts a member wants before paying; then everything the law wants said; then what other members think.

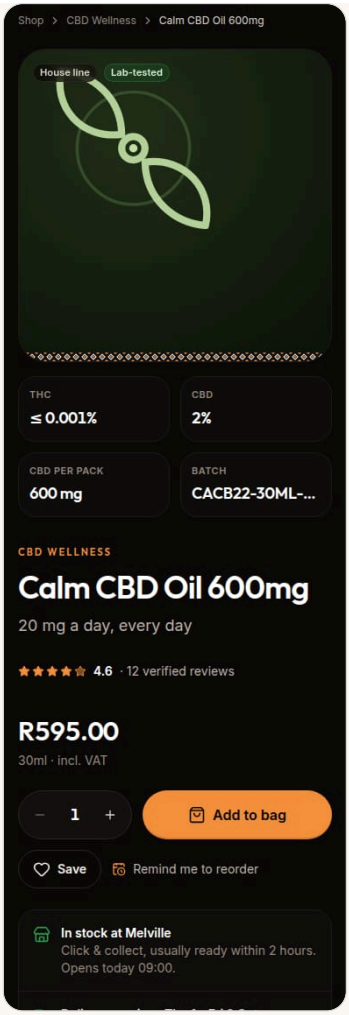

Figure 3.10 **Above the fold.** The gallery with its badges (House line, Lab-tested), the potency tiles (THC, CBD, CBD per pack, Batch), name, tagline and verified rating, the price incl. VAT, **Add to bag**, **Save** and **Remind me to reorder**, then "In stock at Melville · Click & collect, usually ready within 2 hours".

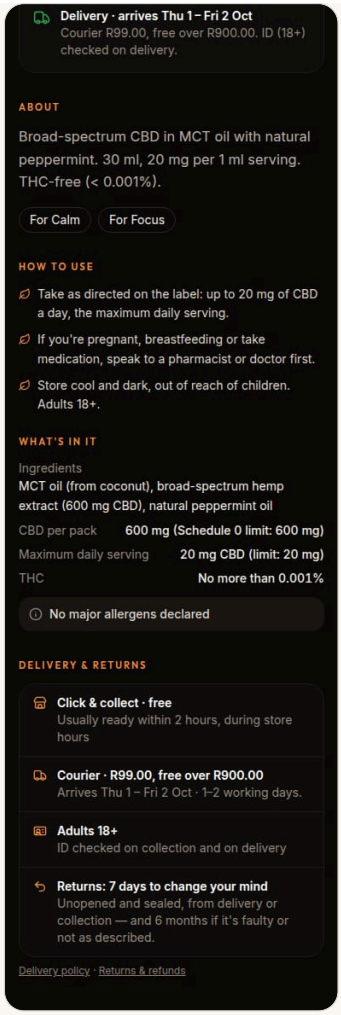

Figure 3.11 **The facts.** "Delivery · arrives Thu 1 – Fri 2 Oct"; About with its moods; How to use; What's in it (ingredients, CBD per pack against the Schedule 0 limit, the daily serving, THC, allergens); and the Delivery & returns panel.

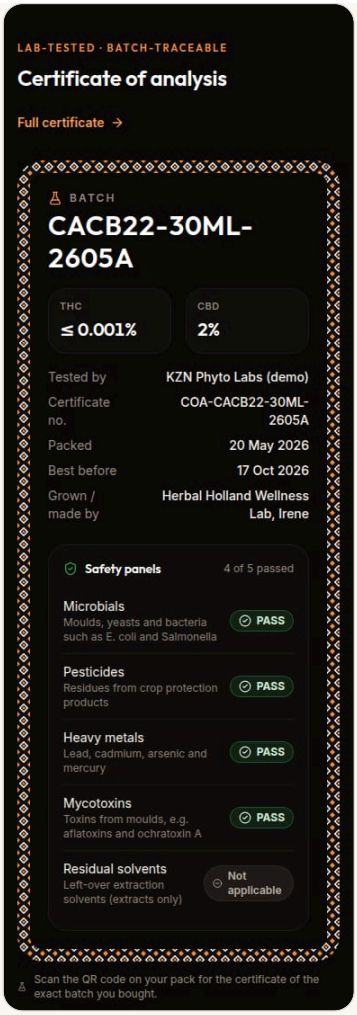

Figure 3.12 **Certificate of analysis.** The batch on the shelf now (THC and CBD, tested by, certificate number, packed and best-before dates, grown / made by) and the safety panels with their PASS marks; "Full certificate" opens `/batch/<code>`.

Top to bottom, where each applies:

- **Photos** when the catalogue has them: a swipeable strip with thumbnails, loaded through the catalogue import's `image_urls` column (appendix B). Otherwise, the generated brand art (no stock photos). Badges: *Heritage*, the line, *Lab-tested*.
- **Potency tiles**: THC (the CBD classes show their cap, "≤ 0.001%"), CBD, CBD per pack, the type for plant products, and the batch code.
- **Name, tagline, brand and line**, the verified-review average and count.
- **Price** incl. VAT with the rule that set it ("Sprout price" and the walk-in price struck through for a member; "R... with Herbal Holland Rewards · Join free" for a visitor), and a *Your deal* tag when one of the member's My Deals applies. Medicines show none of this.
- **Size / pack**: a chip per variant with its price ("out of stock" where it is), quantity, **Add to bag** (or *Add to dispensary order* for licensed items), or **Notify me when it's back** when nothing is available. Under it, **Save** (the heart) and **Remind me to reorder** for consumables.
- **Availability** per way of getting it, from live network stock: "In stock at Melville" (with "only 3 left"), "Not in stock at Melville" with "Available to collect from 4 other stores.", or "Collect from 6 stores" with *Choose your store*; "Delivery · arrives Thu 1 – Fri 2 Oct · Courier R99.00, free over R900.00. ID (18+) checked on delivery", with the same-day line when your store offers it; "Made to order · ships nationwide" for merch; "Collect only · from an authorised dispenser" for licensed medicines.
- **Deals** running on it, and a **Limited drop** panel when it is in a drop.
- **About** with the moods it's made for ("For calm"), **How to use** (from the class and the label, never a health claim) and **What's in it**: ingredients, net content, CBD per pack against the Schedule 0 limit, the maximum daily serving (limit 20 mg), THC ("No more than 0.001%"), "CBD source" for food and drink, and the R146 allergen statement ("Contains: milk, soybeans" or "No major allergens declared").
- **Delivery & returns** in one glance: click & collect · free; same-day from your store and its fee; the courier fee and free threshold with the arrival estimate; "Adults 18+ · ID checked on collection and on delivery"; and the returns rule for the class, with the two policies linked: "7 days to change your mind" (unopened and sealed for consumables) or "faulty or not as described" for medicines.
- **Certificate of analysis** for the batch on the shelf now (or, when you have chosen a store, the next batch it will sell); terpenes and flavours; lineage and origin.
- **Legal basis** ("What this product is, and isn't"): classification, legal basis, approved claims, and the class's warning ("Not intended to diagnose, treat, cure or prevent any disease...", "For use on the skin only...", "A medicine supplied on a SAHPRA Section 21 authorisation...").
- **Verified reviews** ("What members say"): only members who bought the product can review, copy is screened, and a review can carry photos; the newest are gathered under "Photos from members". Never on medicines.

- **Stock near you**: the six nearest stores with "In stock", "3 left" or "Out of stock"; **Complete the deal** when the basket is one item away from a promotion; **Goes well with** and **You might also like**.
- On a phone, once the buy box scrolls out of view a **sticky buy bar** keeps the name, price and **Add** at the bottom of the screen, and turns into **View bag** once the item is in.

Lab results and batch traceability

Every pack carries a batch code and a QR code that opens `/batch/<code>`: the public certificate of analysis for that exact lot. The page states plainly when a batch is **recalled** ("please don't use it"), **on hold** (quarantine) or **past its best-before date**, and says "No laboratory testing required" for accessories, apparel and grow gear. Behind it, stock is kept per store × product × batch, sold first-expiry-first-out, and every unit's movement is on an immutable ledger, so a recall can be traced to the stores holding it and the members who bought it in minutes (chapters 5 and 6).

Learn

`/learn` holds dated, sourced guides written to educate, never to promote medicines: *Heritage landraces & the people who grow them*, *How to read a lab result*, *CBD & Schedule 0, explained*, *Registered patients & Section 21*, *Adults only, and always on your terms* (responsible use) and *How Rewards points work*. Each ends with a short **Learn quest**: a quiz that earns 10 points, once. A "Reviewed by" line appears only when a registered reviewer is configured.

The dispensary

`/dispensary` lists licensed (THC) medicines only to a signed-in member with an **active Section 21 authorisation**, with the authorised quantity remaining. Everyone else sees the gate: how a doctor obtains the authorisation, how to register it in a store, and "Registered patient? Sign in". Licensed products are never in the sitemap, never indexed, and never shown on menu boards in medical mode.

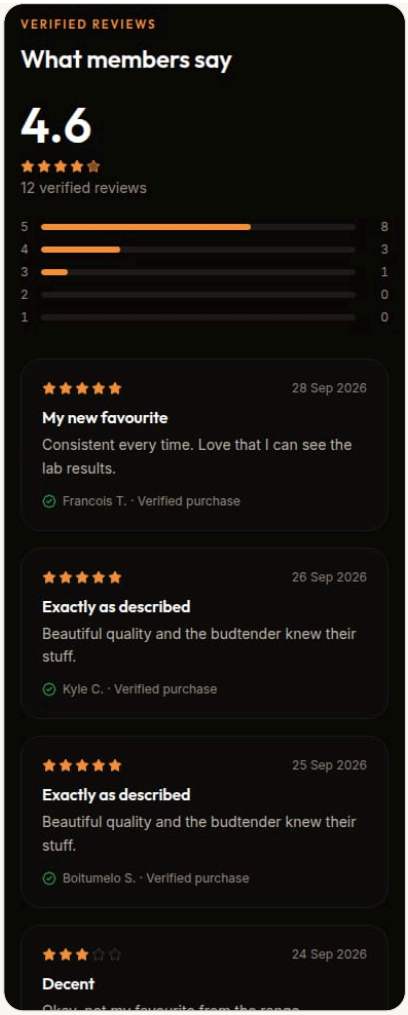

Figure 3.13 **What members say.** The verified-review average, the rating distribution and the reviews, each marked "Verified purchase".

3.3 The bag and checkout: collect, same-day or courier; pay online or when you collect

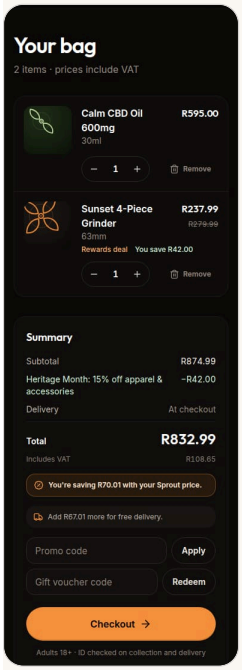

Figure 3.14 **Your bag.** Quantities, remove, the summary with VAT and the Rewards saving, "Add R... more for free delivery", the promo code and **gift voucher** boxes, and Checkout.

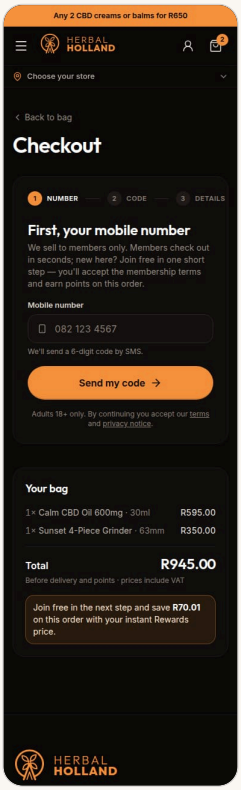

Figure 3.15 **Checkout, step one.** Not signed in? Checkout asks "First, your mobile number". Members check out in seconds; new members join in one step and see what they would save.

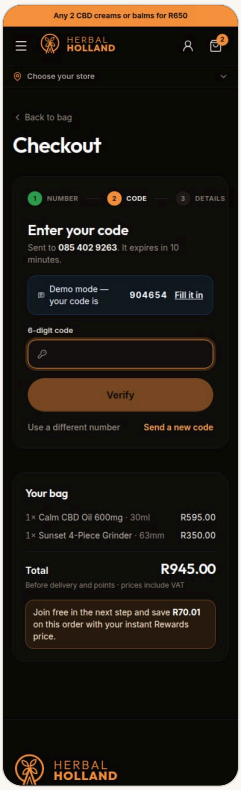

Figure 3.16 **Step two.** "Enter your code", then "Sent to 088 510 1451. It expires in 10 minutes." In demo mode the code is shown on screen with *Fill it in*; otherwise *Use a different number* or *Send a new code*.

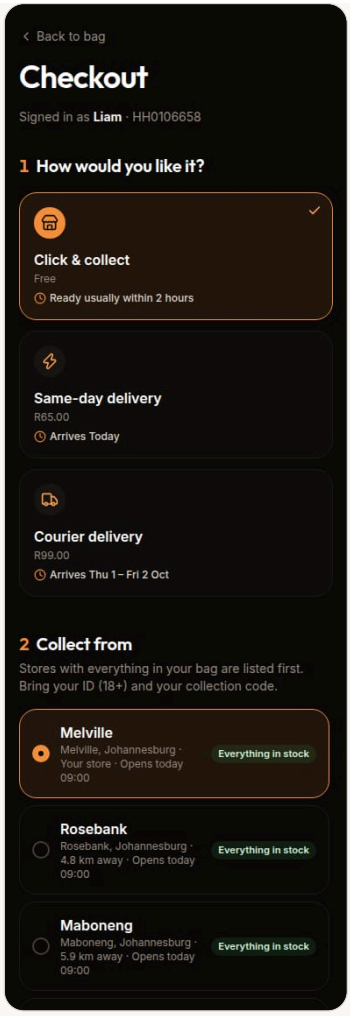

Figure 3.17 **The checkout, steps 1 and 2.** Click & collect ("Ready usually within 2 hours"), same-day delivery ("Arrives Today") and courier delivery ("Arrives Thu 1 – Fri 2 Oct"), each with its fee; then Collect from: stores with everything in stock first, with distance and opening hours.

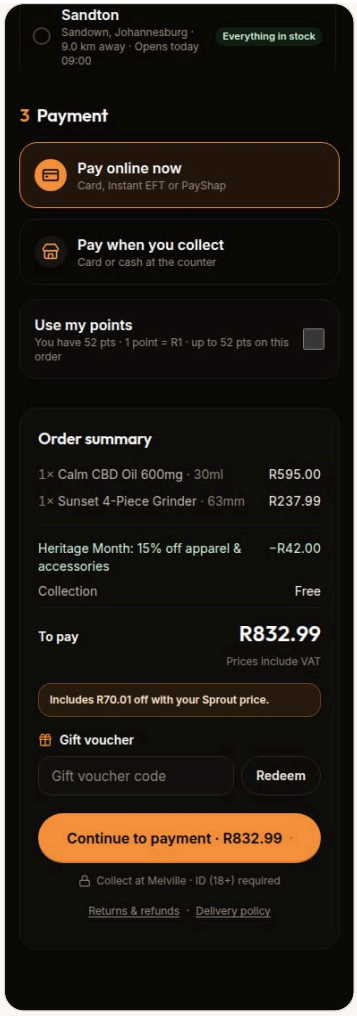

Figure 3.18 **Step 3 and the summary.** Pay online now or Pay when you collect; Use my points; the order summary with the member saving; the **Gift voucher** field; Continue to payment.

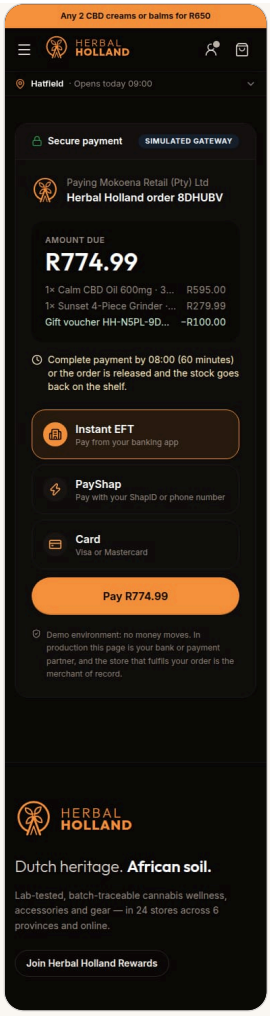

Figure 3.19 **Secure payment.** The amount due after points and a gift voucher, the lines, the payment window, and the method choice. In production this is Peach Payments' hosted page; here the simulated gateway.

What checkout offers, and when

Option	Offered when	Who fulfils it	Fee (defaults, HQ › Online orders)
Click & collect	At least one trading store has *Click & collect* on. You choose the store; stores that have everything in stock are listed first (your own store first even if it is short, so you see why), then nearest.	The store you chose, which must have every item on hand	Free. Ready within about 15 minutes; held for 7 days if you pay in store
Same-day delivery	A trading store within **30 km** of you runs same-day delivery and has everything in stock; order by the cut-off (**15:00**)	The nearest such store; its own driver, ID checked at the door	**R65**; free for Bloom and Harvest members; free over the free-delivery threshold
Courier delivery	Always (before the first store opens, it is the only option)	A distribution centre first; otherwise the nearest store that can fill it	**R99**, free on baskets of **R900** or more; 2–4 working days
Made to order	Any bag with a made-to-order variant (one with a merch partner code; the merch range itself is in stock) goes by courier	The merch partner makes it and couriers it white-label; 5–8 working days	**R100** merch courier, always on top and never free

RULES AT CHECKOUT

- **Members only.** Checkout signs you in or joins you first.
- **Licensed medicines (THC)** can only be collected in store, only from a store licensed for them, only by a patient with headroom on an active authorisation. They are **always paid in store**: checkout offers "Pay when you collect" only, because no online payment provider accepts them.
- **Age-restricted items** (THC, every CBD class, hemp, accessories, grow) need a verified age: add your SA ID number at checkout and it is verified instantly, or show ID at any store. Supplements without cannabis and apparel don't need it.
- **Points**: whole points, from a minimum of 20, up to 50% of the eligible amount (delivery included, medicines excluded). Points are earned only after handover or dispatch.
- **Gift vouchers** are redeemed here or in the bag (under *Gift voucher*) and pay after points, with online payment only; a voucher that covers the whole order places it as paid. See *Gift vouchers* later in this chapter.
- **Drops**: members only, tier early access and per-member limits are checked before you pay, in plain words ("update your bag").
- **Pay online** creates the order as *awaiting payment* and reserves the stock for **60 minutes**; unpaid, it is cancelled and the stock returns to the shelf. **Pay when you collect** places the order at once (click & collect only).
- A basket that isn't in stock anywhere it could be fulfilled is refused with up to three alternative stores.

Delivery estimates and saved addresses

Every option says when it lands. Click & collect is "usually within 2 hours" during store hours; same-day is *Today* before the 15:00 cut-off and the next working day after it; courier orders count working days by province from the settings, starting the next working day after the cut-off and skipping weekends and public holidays. The defaults (HQ › Online orders) are Gauteng 1–2; Western Cape, KwaZulu-Natal, Free State, Mpumalanga and North West 2–3; Eastern Cape and Limpopo 3–4; Northern Cape 3–5. The estimate is repeated under the address ("Arrives Thu 1 – Fri 2 Oct", with "choose your province for a closer estimate" until the province is chosen), on the product page and on the order tracker. The delivery policy says what it is: an estimate, not a promise.

Deliver to offers your saved addresses as chips ("Home · 14 Beach Street, Melville") with *New address* beside them; a chip fills the fields, which stay editable. **Save this address** is ticked by default, labelled *Home*, *Work* or *Other*, so the address an order ships to is kept (or updated) for next time. Each member can keep up to five, managed under Rewards › **Addresses** (`/club/addresses`): edit, remove, or make one the default that checkout starts from. Addresses are personal information under POPIA: shown only to the member, sent to the fulfilling store on the order, and deleted with the account.

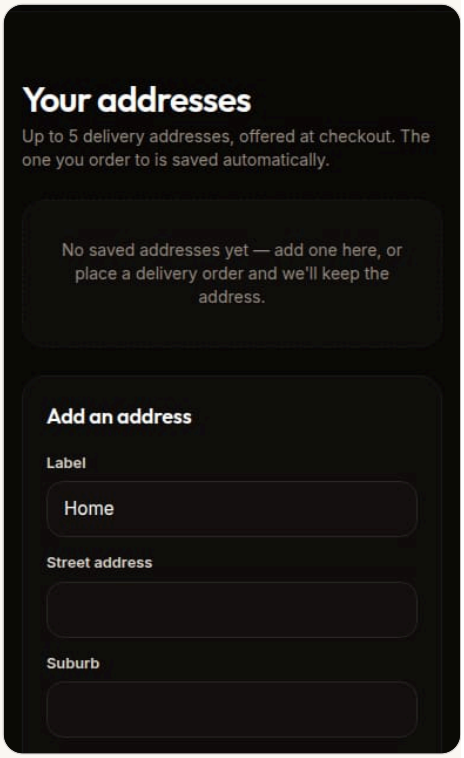

Figure 3.20 **Your addresses.** "Up to 5 delivery addresses, offered at checkout. The one you order to is saved automatically." Below it, the form to add one, with a default-address tick.

After the payment page (chapter 9 explains Peach Payments, Yoco and the simulator) the order page says *Payment received*, *Waiting for payment confirmation…* (refreshing itself), *Payment cancelled* with **Try again**, or that the payment didn't go through. The return from the payment page is never taken as proof of payment: the order is confirmed when the gateway's webhook lands.

3.4 Order tracking and tax invoices

The order page (`/orders/<code>`) is a live tracker: while the order is open it re-renders when you come back to the tab and every minute ("Updates by itself while it's open"). The heading says where things stand ("Collect at Hatfield", "On its way to you", "Collected. Thank you", "Delivered. Thank you", "Order cancelled"), with the placed time and the fulfilment. For a collection the **collection code** is shown large with its QR code and "Show this code and your ID (18+) at the counter, where your ID is checked. Only you can collect this order." Once the order is ready, it adds "Ready since" with the time, and "We'll hold it for 7 days". **Progress** lists each step with its time and a plain line ("Checked against the batch on the shelf", "Waiting for the driver", "ID (18+) checked at the door"), with "Every update" behind a disclosure. **Items** carries **Buy again**, the totals, the points and vouchers used, and "You saved R… with Herbal Holland Rewards". A delivery order shows the address, "Expected Thu 1 – Fri 2 Oct", where it ships from, the courier and tracking number once dispatched, and "Your ID (18+) will be checked on delivery. We can't leave the parcel without it." Then the invoice, the returns panel and whom to call, quoting the order code. Only the member who placed the order sees the code, the items and the address; anyone else with the link sees the progress and a sign-in prompt.

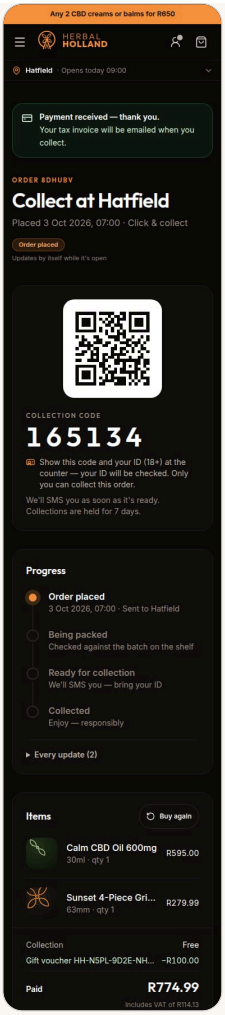

Figure 3.21 Order placed. "Collect at Hatfield": the collection QR and 6-digit code, the progress steps and the items. Show the code and ID (18+) at the counter.

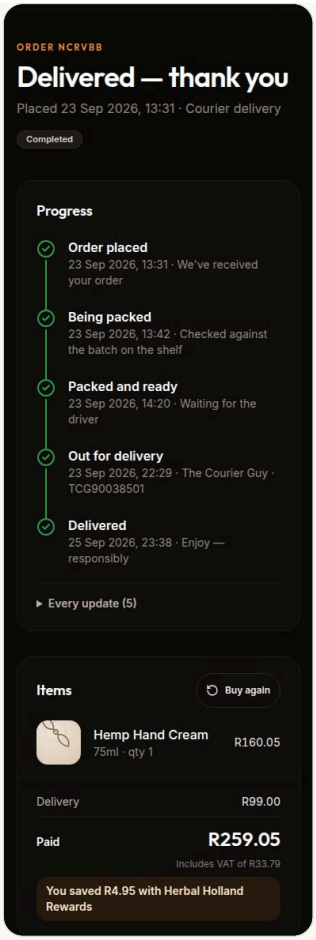

Figure 3.22 Delivered. Every step with its time, the courier and tracking number under "Out for delivery", the items with **Buy again**, and the saving.

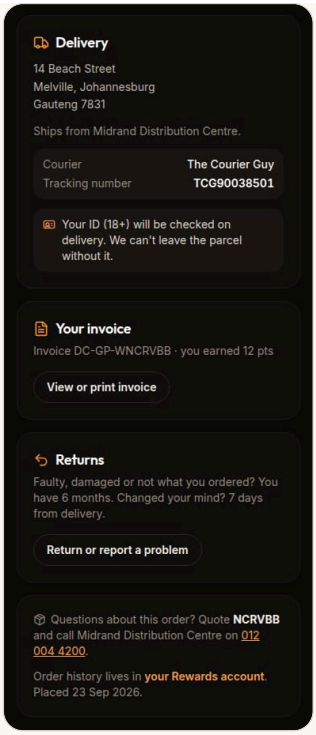

Figure 3.23 The delivery panel. The address, "Ships from Midrand Distribution Centre", the courier and tracking number, the ID (18+) notice, the invoice with the points earned, and Returns.

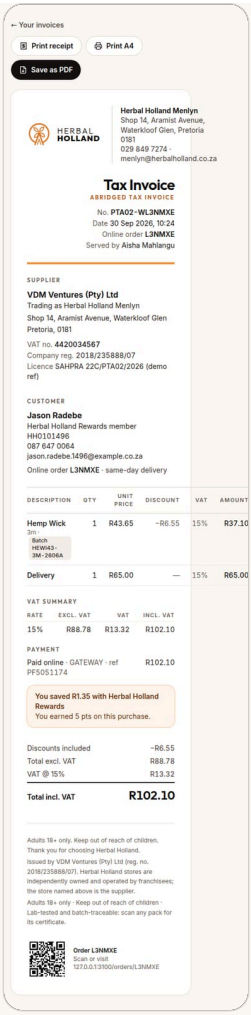

Figure 3.24 A tax invoice. Supplier (the franchisee company), licence reference, the member, lines, tender, VAT, the 18+ footer and a QR code that verifies the invoice online.

Status	Meaning	Member hears
Awaiting payment	Placed with pay-online; stock reserved for the payment window	—
Order placed	Paid (or pay-in-store); sent to the fulfilling store or DC	SMS "order received … Track: /orders/CODE"
Being packed	Picking from the batches shown, first expiry first out ("Being made" for merch)	—
Ready for collection / Packed and ready	On the counter or the packing bench	Collections: SMS with the collection code and "bring your ID"
Out for delivery	Dispatched with a courier or driver and a tracking number	SMS with the tracking number ("have your ID ready")
Collected / Delivered	Handed over after the ID check; the sale is posted at the fulfilling store and points are added	SMS "complete" or "delivered", and "your points have been added"; tax invoice by email
Cancelled	By the store or HQ, or automatically (unpaid, or not collected within 7 days); stock released, points returned, online payments refunded	SMS "any payment or points used have been returned"

Members find every order under Rewards › **Orders** and every receipt under Rewards › **Invoices & receipts**. Each sale is emailed as an **abridged tax invoice** (up to R5,000) or a **full tax invoice** (above R5,000, with the buyer's name and address captured at the till); a franchisee that isn't a VAT vendor issues a plain invoice with no VAT. Every invoice has a hosted, printable copy behind a signed link (`/invoice/<id>?t=…`) with a QR code. The link can't be guessed, and the QR on the paper invoice opens the same page. Print it on A4, save it as a PDF, or print it on 80 mm till paper with **Print receipt** (chapter 9). Members can't cancel an order themselves: they contact the store, which cancels it from the back office (chapter 5).

3.5 Help, support tickets and returns

Two doors for when something isn't right: a support desk and online return requests. Both follow the returns and delivery policies at the end of this chapter, and both keep the member posted at every step.

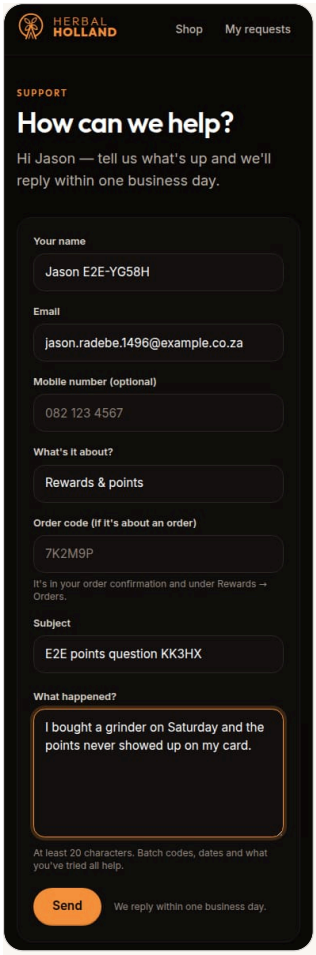

Figure 3.25 **How can we help?** Name, email, mobile (optional), what it's about, the order code, a subject and what happened; "We reply within one business day."

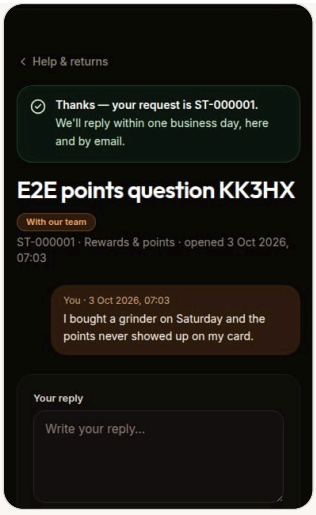

Figure 3.26 **The ticket.** "Thanks. Your request is ST-000001", the status *With our team*, the conversation and the reply box (a photo can be attached).

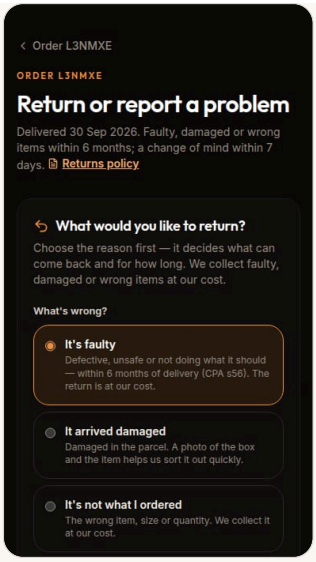

Figure 3.27 **Return or report a problem.** Choose the reason first (it decides what can come back and for how long), then the items and a note; photos help.

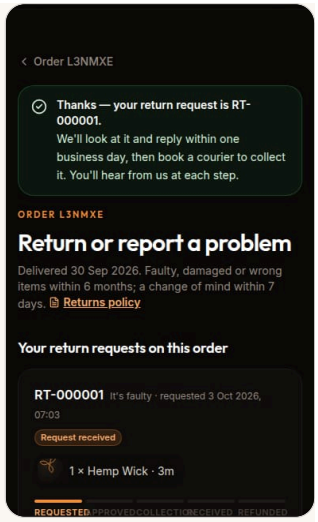

Figure 3.28 **Requested.** "Thanks. Your return request is RT-000001", the items and the progress bar: Requested › Approved › Collection › Received › Refunded.

Help (support tickets)

`/support`: "Tell us what's up and we'll reply by email within one business day. You don't need to be a member to ask." Choose what it's about (*An order*, *Delivery or collection*, *A product*, *Rewards & points*, *My account*, *Something else*), write it in plain English, give a name, email and phone, and tick the consent to use those details to reply (never pre-ticked). Members see their tickets under Rewards › **Help**, with the conversation and a reply box, and can attach a photo. Statuses as the member sees them: *With our team*, *We've replied*, *Resolved*. A reply within 30 days reopens a resolved ticket. Every ticket shows the service levels: a first reply within 1 business day and a resolution within 5 (SAST business days). Only the name, email, phone and what was written are kept; resolved tickets and their messages are deleted a year after they close.

Returns and problems with an order

Rewards › Orders › the order › **Return or report a problem**: choose the items and a reason. *It's faulty* (defective, unsafe or not doing what it should, within 6 months of delivery under CPA s56; the return is at our cost), *It arrived damaged* (a photo of the box and the item helps), *It's not what I ordered* (we collect at our cost), *I changed my mind* (until the end of the 7th day after delivery under ECTA s44; never for made-to-order merch or licensed medicines; consumables and skin care only unopened and sealed, which the member confirms and staff check on receipt), or *Something else*. The request then reports its progress: *Request received* › *Approved: collection coming* › *Courier booked* › *We have it: refund on its way* › *Refunded*, or *Declined* with a reason. Refunds go back to the payment used and points come back; on a change-of-mind return of a whole order the delivery fee isn't refunded, because it pays for the collection (a treatment counsel is still to confirm).

3.6 Herbal Holland Rewards: card, tiers, instant prices and points

The Rewards home is the member's **card**: name, member number, tier, points balance and a QR code (the member number) to scan at the till, with the Founding Member number where there is one. Once the wallets are configured (chapter 9), **Add to Apple Wallet** and **Add to Google Wallet** appear under it. Below: "You've saved R... with Herbal Holland Rewards", share buttons, the tier ladder with progress to the next tier, perks, a row of chips to the rest of Rewards (**Wishlist**, with "2 back in stock" when something returned; **Reorder reminders**; **Gift vouchers**; **Addresses**), My Deals, tickets and upcoming events, recent points and recent orders (each completed order with **Buy again**), Invite a friend, and the patient authorisation panel.

Tier	Rolling 12-month spend	Instant saving	Perks
Seed	From joining	3%	Birthday bonus; member-only drops; members' evenings
Sprout	R2,500+	5%	Early access to selected drops
Bloom	R7,500+	7%	Free same-day delivery, where available; early access to more drops
Harvest	R15,000+	10%	Early access whenever a drop opens early

Percentages are HQ settings (HQ › Rewards); the perks are the programme's promises to members, and each tier keeps every perk of the tiers below it. Tiers are reviewed on every purchase against the last 12 months of spend in store and online; a Founding Member's floor holds their tier for the founding period whatever they spend.

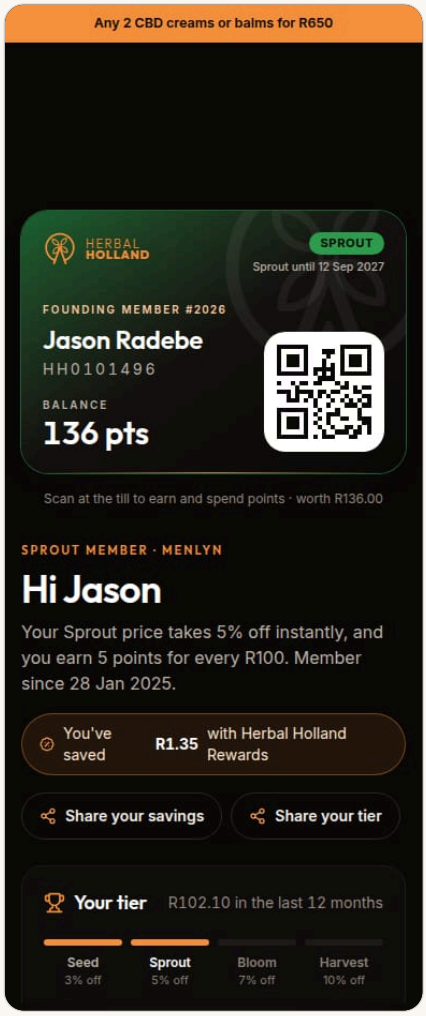

Figure 3.29 **The card.** A Seed member with her QR, balance, savings to date, share buttons and the tier ladder; a Founding Member's card carries the number too.

The **wallet pass** is the card in Apple Wallet or Google Wallet: Holland orange on warm black, the member number as the till's QR code, the tier, the points balance, the first name and the Founding number, and nothing else personal. The buttons appear only when the platform holds the wallet keys (chapter 9); until then the routes simply say the wallet isn't set up yet.

How the money works

- **Instant member prices**: once the member is identified (signed in online, or found at the till), eligible prices drop by the tier percentage on the spot, or to the week's *Rewards deal* price when that is lower. At the till, walk-ins see "Members save R... on this basket: add or sign up (free)". Never on medicines; never for walk-ins. The saving is reported per sale and carried by the selling store as a price reduction.
- **Points**: 5 points per R100 actually paid (not on points redeemed, not on medicines), in every tier; 1 point = R1; redeem from 20 points, up to 50% of an eligible basket; promotions can multiply points. Points are a network liability: the issuing store funds them and the redeeming store is reimbursed on the monthly franchise statement, so cross-store redemption never punishes a franchisee.
- **Bonuses**: 25 points on joining; 100 on your birthday (once a year, by the nightly job); 50 each for you and a friend who joins with your link, after their first purchase.
- **Refunds** reverse the points earned on the refunded items; cancellations return points used.

3.7 My Deals, referrals, share cards, drops, events and quests

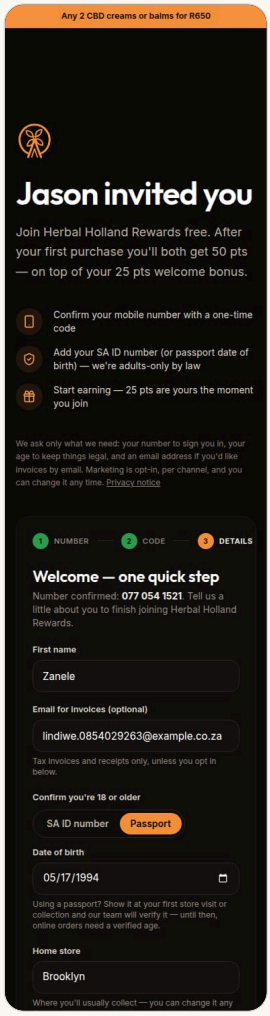

Figure 3.30 **"Tumi invited you."** A friend's link pre-fills the referral; both get 50 points after the first purchase.

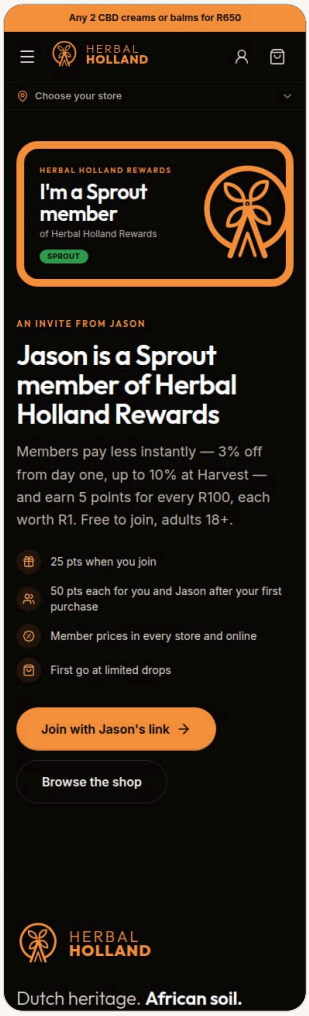

Figure 3.31 **A share card** (`/s/…`): first name, tier or savings and the invite. It is signed, so it can't be forged.

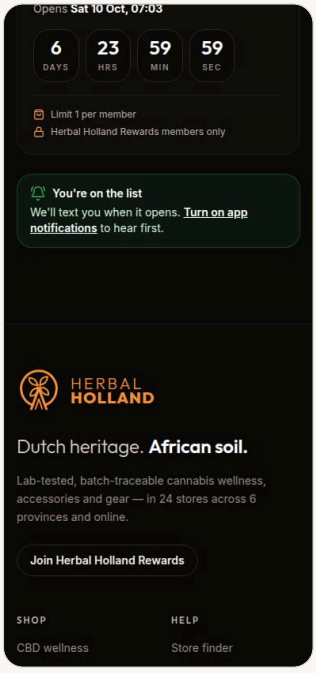

Figure 3.32 **A limited drop.** Countdown, early access for the member's tier, the per-member limit, "You're on the list".

Figure 3.33 **An event ticket.** The QR to scan at the till, add to calendar, cancel my place, and "Good to know".

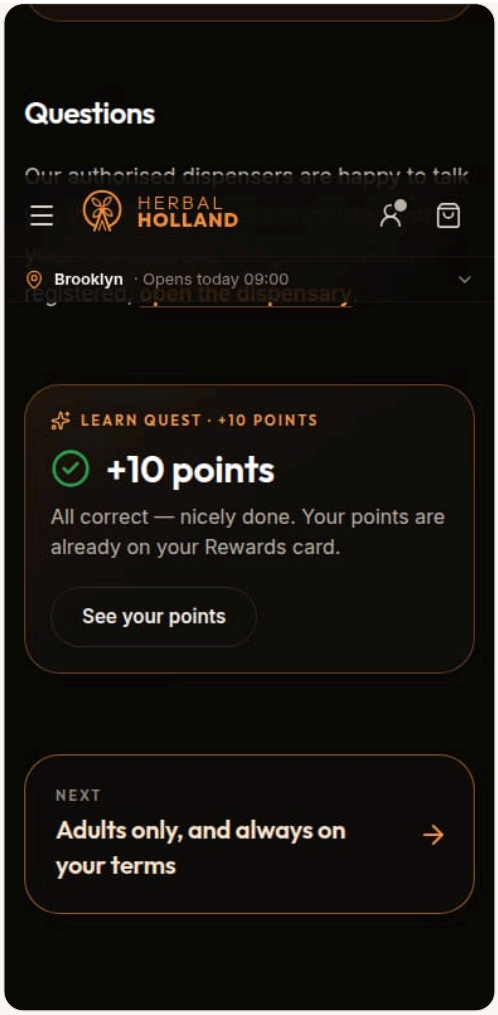

Figure 3.34 **Quest passed.** "+10 points" and "All correct, nicely done." at the end of a Learn guide.

My Deals	A personal offer loaded to the card each week (Mondays) on something the member buys often (15% for 7 days by default), applied automatically at the till and online, HQ-funded from the marketing fund and credited to the store. Members can switch personalised deals off in Settings (POPIA objection to profiling); medicines are never part of a deal.
Invite a friend	A referral link (`/club/join?ref=CODE`) and code on the card; while the Founding Members list is open, every friend who joins moves the member up the list by the friend boost (250 places by default).
Share cards	"Share your savings" / "Share your tier" create a signed card page carrying only the first name, the saving or tier, and the referral link, never what the member bought.
Drops	Limited releases of apparel, accessories or CBD (never medicines): members only, an opening time with early access for a tier (e.g. Harvest two hours early), a per-member limit enforced online and at every till, and "Notify me" by app notification or SMS inside legal send times. `/drops` lists live and coming drops.
Events	Opening weekends and members' evenings with capacity-limited RSVPs (one ticket per member), a QR ticket (`HHRSVP:…`) checked in at the till from two hours before the start, an .ics calendar file, and "Cancel my place". Free for members, adults 18+, ID at the door.
Learn quests	10 points for passing an article's quiz, once per article.
Welcome gift	A first-purchase promotion HQ runs: the till suggests the gift once the member is identified; a member who has never bought sees it on their card.

3.8 Buy again, wishlist and reorder reminders

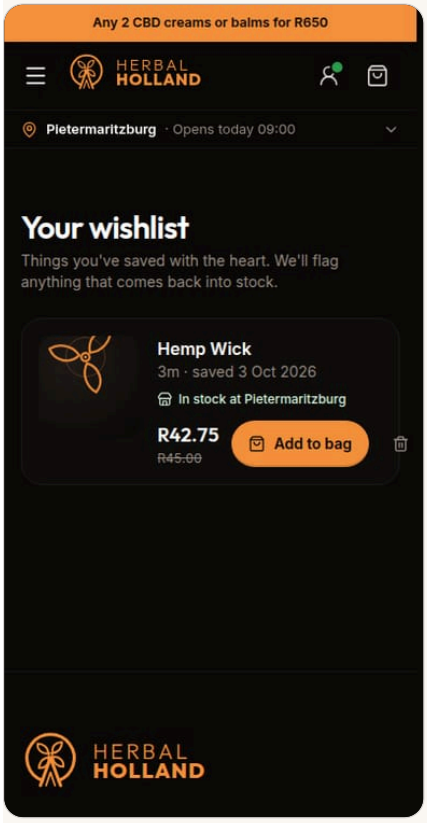

Figure 3.35 **Your wishlist.** Saved with the heart: the variant, when it was saved, "In stock at Ballito", the price and member price, Add to bag, remove. "Back in stock" appears for two weeks when something you wanted returns.

Figure 3.36 **Reorder reminders.** "Every 30 days by SMS · next 30 Oct 2026", and the note that these are messages you asked for, not marketing, and that no card is ever charged.

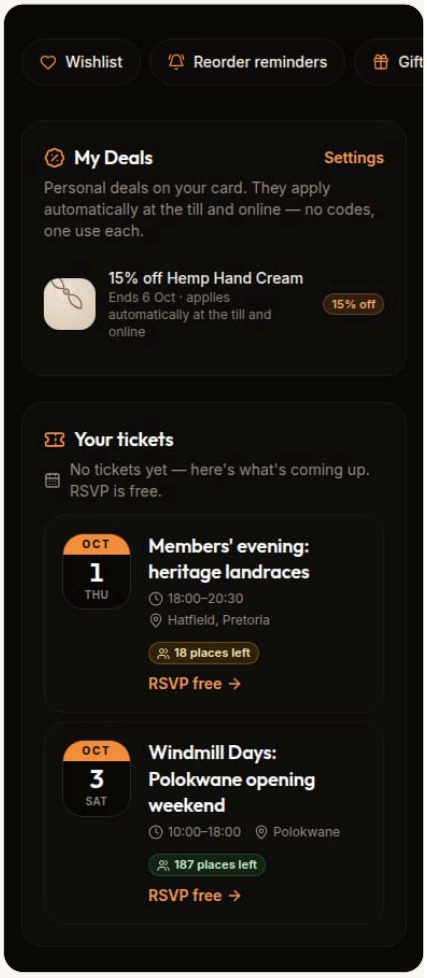

Figure 3.37 **More in Rewards.** The chips under the tier ladder (Wishlist, Reorder reminders, Gift vouchers, Addresses), then My Deals and your tickets.

Buy again One tap on a completed order (on its tracking page next to *Items*, on the Rewards home under *Recent orders*, or in Rewards › **Orders**) puts its lines back in the bag and says exactly what happened: "Added 3 items to your bag." or "Nothing could be added to your bag.", then "Left out: Sunset grinder (out of stock right now)". The reasons are plain: *no longer available*, *out of stock right now*, *needs your patient authorisation, so order it from the dispensary*, *only 2 in stock, so we added 2*, *already 20 in your bag*, *your bag is full* (a bag holds 30 lines of up to 20 each). Nothing already in the bag is removed.

Wishlist The heart on every product card and product page: **Save** becomes **Saved**. Rewards › **Wishlist** (`/club/wishlist`) lists what you saved with live stock at your store, the price and *Add to bag*. The 15-minute job notes when the whole network runs out of something on a wishlist and when it comes back, and marks it **Back in stock** for 14 days; it sends nothing, because "Notify me when it's back" on the product page is the alert.

Remind me to reorder On consumables (coffee, collagen, oils; never medicines or made-to-order merch), **Remind me to reorder** opens a small form: *Every* 14, 21, 30, 45, 60 or 90 days, *By* SMS, email (needs an email in Settings) or app notification (needs notifications on), **Set reminder**. The page then says "We'll remind you every 30 days by SMS." with *Change*, *Stop* and *All reminders*. On the day, the nightly job sends one message with a one-tap link that puts the item in your bag and moves the reminder on by its interval; a product taken off sale stops its reminders. **Nothing is charged**: there is no card on file, and a reminder never places an order: the member does, from the bag. Reminders are transactional (the member asked for exactly this), so they go out whatever the marketing consents say, and they carry no offers and no other products. Rewards › **Reorder reminders** (`/club/reminders`) lists them with the next date and a stop button.

3.9 Gift vouchers

A gift voucher is money, not a promotion: it pays for anything in the range, earns nothing on top and is never discounted. `/gift` ("Give the gift of choice.") sells them to signed-in members (joining is free), so the receipt and the code are always in the buyer's account.

1. Choose **R200**, **R500** or **R1,000**; add *Their name* and *Their email* (optional: "We'll email them the voucher with your message. Leave it out to send it yourself.") and *Your message* (up to 240 characters).
2. **Buy R500 voucher** places an ordinary online order for the voucher and opens the normal pay page. "You pay R500, with no fees and no bonus value."
3. The moment the payment lands, the order completes on the spot (there is nothing to pick) and the voucher is issued: a code like `HH-K7PM-3QXR-9ZAB` (no 0/O or 1/I, so it survives being read out), emailed to the buyer and to the recipient with the message, and texted to the buyer. The order page shows the code, the balance and "valid until". An unpaid voucher order lapses with every other unpaid order (60 minutes); one still pending after two days is cancelled.
4. To redeem online, the member enters the code in the bag or at checkout under **Gift voucher**: "Gift voucher HH-… · R… will come off this order · R… on the voucher". It pays what points leave, before online payment; an order the voucher covers entirely is placed as paid. Cancelling that order puts the money back on the voucher ("The gift voucher's balance has been restored"). A pay-in-store order keeps the code for the counter.
5. To redeem in store, the member shows the email or card at the counter: the till's **Gift voucher** tender (section 4.5) takes the code, typed or scanned, and pays up to the balance and what's due, alongside cash, card or points. What a voucher paid goes back onto the voucher if the sale is refunded; a voucher is never cashed out.
6. Check a balance at `/gift?check=CODE` (anyone with the code) or under Rewards › **Gift vouchers** (`/club/vouchers`), which also lists the vouchers you bought (Awaiting payment, Active, Used up, Expired or Cancelled) with the balance, "valid until" and who it was sent to.

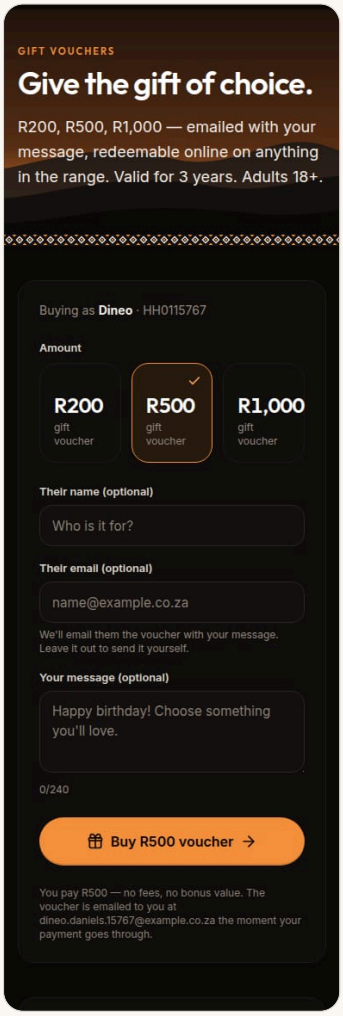

Figure 3.38 **Give the gift of choice.** R200, R500 or R1,000; their name and email, your message; "Buy R500 voucher", paid on the normal pay page and emailed the moment the payment goes through.

RULES (CPA S63)

- A voucher is **valid for three years** from the day it is issued, not the day it was bought (Consumer Protection Act s63(2)); the balance stays on it until then (s63(3)); it can't be exchanged for cash; the daily job marks expired ones.
- No bonus value, no fees, no discount. Because it is consideration already paid, it may lawfully pay for a medicine too (Medicines Act s18A is about inducements). Vouchers are redeemed online (in the bag or at checkout) and **at the till**, where the voucher is checked on the server and redeemed as the sale posts; refunds return what the voucher paid to the voucher, never as cash.
- No VAT at issue; VAT is accounted for on the sale the voucher pays for, when it is handed over. HQ's voucher liability is the sum of the active balances.
- Purchase, issue, redemption and release are all in the audit log.

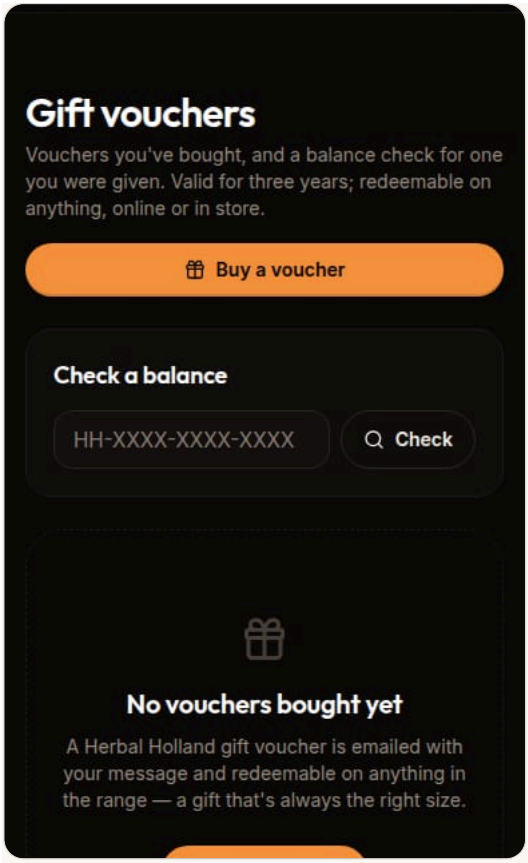

Figure 3.39 **Rewards › Gift vouchers.** Buy a voucher, check a balance, and the vouchers you bought with their status and balance.

3.10 Patient authorisation (Section 21)

Cannabis medicines containing THC are supplied on a **SAHPRA Section 21 authorisation** obtained by the patient's doctor. A member brings the authorisation and their ID to any store; an authorised dispenser captures it in the patient register (number, prescriber and HPCSA number, what is authorised, the monthly quantity in grams, the dates, and a reference to the filed copy, but **never the condition**), and it appears on the member's card: status, prescriber, valid-until, scope, and the authorised quantity left over a rolling 30 days. Licensed items can then be added to a dispensary order for collection, and the register is a live report for SAHPRA (chapter 5).

3.11 Settings, consents and your data

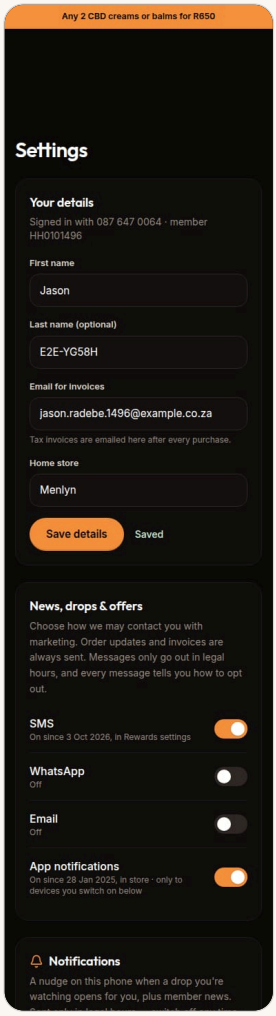

Figure 3.40 **Settings.** Your details and home store; marketing consent per channel with when and where it changed; app notifications.

- **Your details**: first name, surname, email, home store. Removing your email withdraws email consent too.
- **News, drops & offers**: SMS, WhatsApp, email and app notifications, each with "On since … in store / when you joined / in Rewards settings" from the consent ledger. Order updates and invoices are always sent. Messages only go out in legal hours, and every marketing message says how to opt out (reply STOP to texts; a one-click link in emails that lands on `/unsubscribe`).
- **Notifications**: switch app notifications on per device (needs the app on the home screen on iPhone).
- **My Deals**: the personalised-deals switch.
- **Age verification**: status (SA ID number checked · ID sighted in store · Verified with Home Affairs) and the last four digits; or verify now.
- **Your data**: ask for a copy, a correction or closure by emailing the Information Officer at the franchisor company's email (hello@herbalholland.com until it's set); the privacy notice and the PAIA manual.

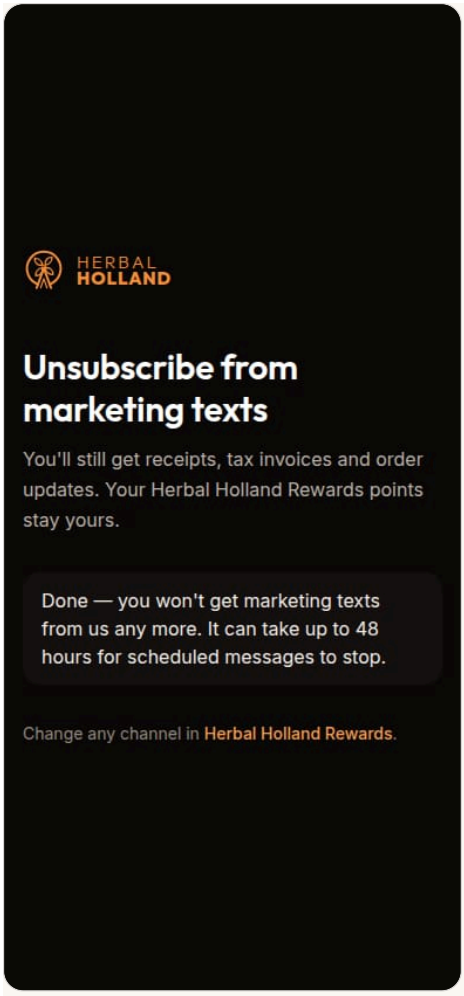

Figure 3.41 **Unsubscribed.** Receipts, tax invoices and order updates still arrive; points stay.

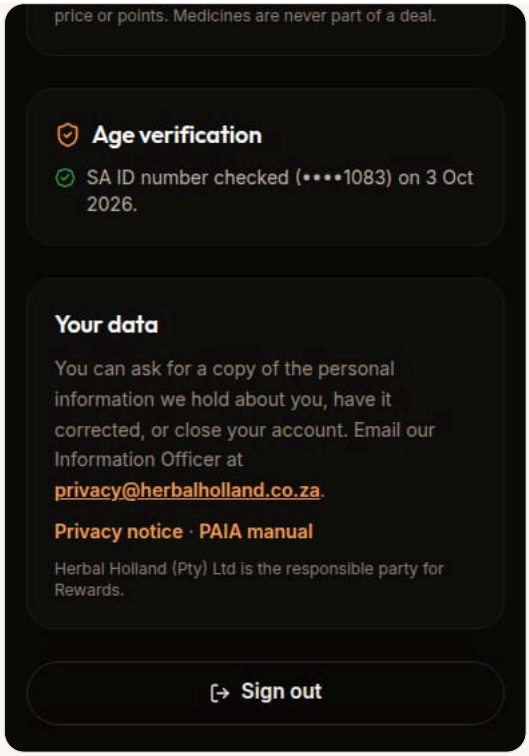

Figure 3.42 **Verified.** Once the SA ID number is checked, age-restricted items can be ordered online.

3.12 Returns, delivery, privacy and terms

Four legal documents live on the shop at `/legal/…`, linked from every footer; figures HQ can change (fees, thresholds, the cut-off, the payment window) are read live from settings, never typed into the copy, and every line passes the same copy screening as marketing.

Membership terms	The full agreement behind the key terms (Version 1 · 27 September 2026, `TERMS_VERSION` in the code). Counsel signs it off and fills in the directors' names before launch; any change after launch bumps the version so members accept it again.
Privacy notice	How personal information is collected, used and protected under POPIA; the responsible party for Rewards is the franchisor company.
Returns & refunds	Faulty goods: repair, replacement or refund within 6 months, the return at our cost (CPA s56); change of mind on online orders within 7 days of delivery, the member pays only the direct cost of returning, refunded within 30 days (ECTA s44); made-to-order merch and opened consumables excluded (ECTA s42, marked "for counsel"); 5 business days after direct marketing (CPA s16); in-store returns of unopened non-consumables within 7 days once stores open.
Delivery	Courier from the warehouse nationwide; fees and the free threshold; pay within the payment window; 2–4 working days; delivery **only to the member named on the order, in person, ID on request**, never left with a neighbour or at reception; licensed medicines never delivered; two attempts, then back to the warehouse (redelivery at the courier fee, or a refund of the goods).

The PAIA manual is on herbalholland.com (chapter 8). Copy for all four documents is in `src/lib/policies.ts` and `src/components/shop/legal/`.

4

CHAPTER 4

The till (point of sale)

A phone, tablet or computer paired to the store. **Tap on glass** or a card machine, cash, PayShap and points; members joined in 20 seconds; **keeps selling when the connection drops**; a printer, drawer, **customer display** and **training mode** when you want them.

IN THIS CHAPTER

4.1 The screen at a glance

4.2 Shifts and cash: opening the float, X-report and Z-report

4.3 Selling: search, scan, members and age checks

4.4 Licensed dispensing: patients, quantities and the authorised dispenser

4.5 Taking payment: tenders, split payments and points

4.6 Refunds

4.7 Online orders: picking, handover with an ID check, dispatch

4.8 Event check-in and welcome gifts

4.9 Offline mode and sync

4.10 Till hardware: receipt printer, cash drawer, scanners and the customer display

4.11 Training mode and quiet hours

4.12 Stock lookup, commission and the menu board

4.1 The screen at a glance

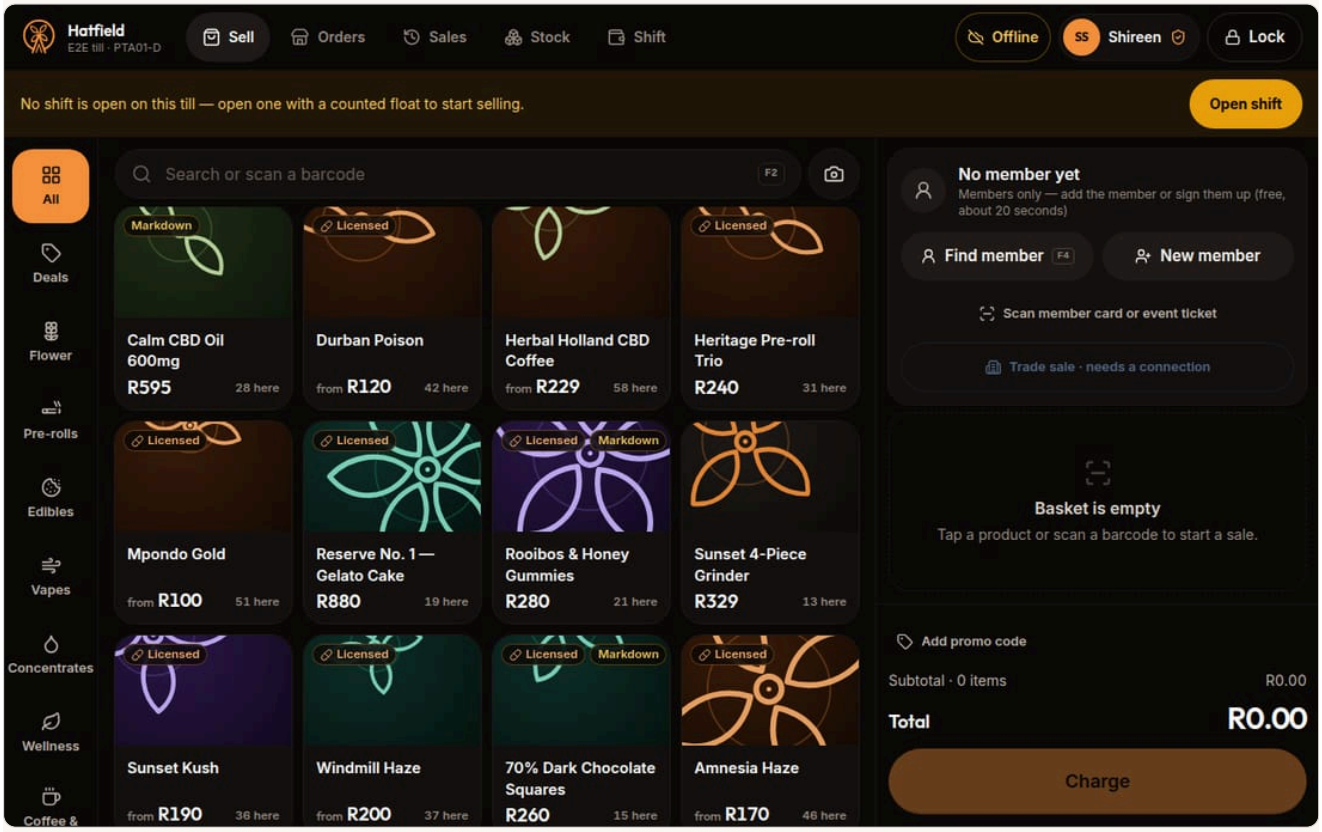

Figure 4.1 **The Sell screen.** Category rail on the left; search or scan (F2); product tiles with their badges (Licensed, Markdown, Deal, Heritage) and "34 here" stock; the basket on the right with the member slot, promo code and totals; the tabs Sell · Orders · Sales · Stock · Shift; the Online/Offline chip; who is signed in; Lock. The amber bar says no shift is open yet.

Tab	What it's for
Sell	The basket: find products, attach the member, apply deals, check compliance, take payment, print or email the receipt.
Orders	The online-order board for this store: new, picking, ready, handed over today. Hand over collections with an ID check; dispatch and deliver same-day orders.
Sales	The last 90 days of this store's sales: reprint or email a receipt, refund lines.
Stock	Look up what's on hand and available here for any product.
Shift	Open and close the shift (float, count, Z-report), your commission this month, and "This till": refresh the catalogue, the receipt printer & drawer, the customer display, training mode, unpair.

The chip at the top right shows **Online** or **Offline**; a badge counts sales waiting to sync. Tap **Lock** whenever you step away. Keyboard: `F2` search, `F4` find member, `F9` charge.

4.2 Shifts and cash: opening the float, X-report and Z-report

Nothing sells until a shift is open on this till. Opening needs a connection; the till tells you if you try offline.

1. Go to **Shift**. Count the float into the drawer. Choose a standard float (R1,000 is the default; other quick amounts are offered) or **Count the float by denomination** (R200 notes down to 10c coins), and press **Open shift with R....**
2. During the shift the panel is a live **X-report**: sales, VAT included, discounts given, Rewards savings given, refunds, online handovers, cash and card takings, points issued and redeemed, and the cash expected in the drawer (float + cash sales − cash refunds).
3. To close, count the drawer by denomination. The count is **blind** for a member advisor: the till shows only what you counted, and **Expected** and the **Variance** appear on the Z-report once the shift is closed (a manager sees them while counting). A count more than R50 out needs a note. The till confirms "Close this shift?". Closing needs a connection and refuses while offline sales are still queued ("Sync 2 offline sales before closing").
4. The **Z-report** is shown at the till and printed as an 80 mm slip (on the paired receipt printer, or from the print dialog), emailed to the store's address, and becomes the cash-up in the back office (chapter 5), where it can be printed on A4 or saved as a PDF. Variances of R50 or more are flagged there; R500 or more raises a high-severity loss-prevention alert immediately.

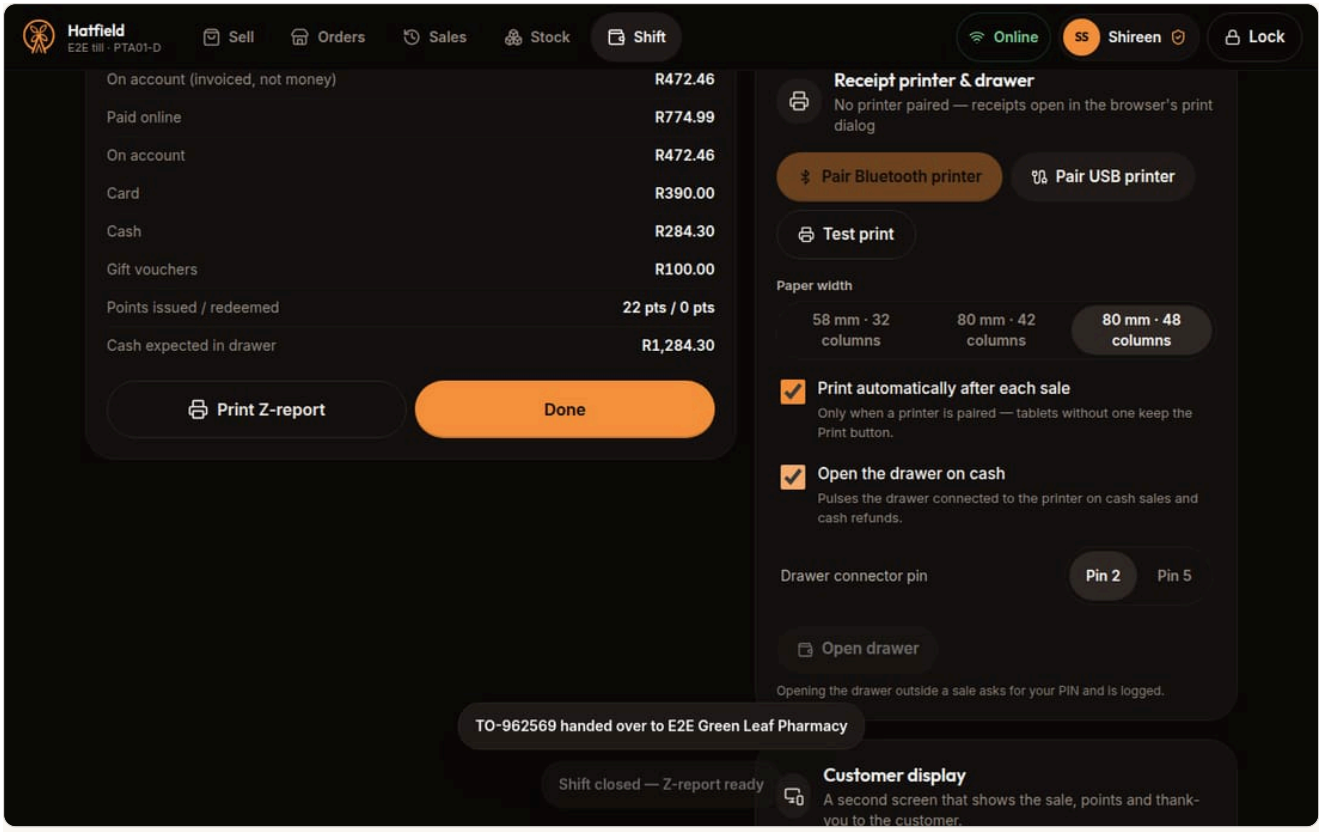

Figure 4.2 **Z-report.** Takings, cash counted and the variance; sales, VAT, discounts, Rewards savings, refunds, online handovers, cash, card, points, cash expected. On the right: the person's commission this month and "This till" with the catalogue's last download, products cached, sales waiting to sync and the card-payment provider.

4.3 Selling: search, scan, members and age checks

Building the basket

- Tap a product tile, **scan a barcode** (with a USB or Bluetooth scanner on any screen, or the camera button next to the search box), or type in the search box: a search that matches exactly one product with one size adds it straight away. The scanner reads product barcodes, member card QR codes, collection QR codes, event tickets, and also a pack's batch code or certificate QR, which finds that lot.
- A product with several sizes opens a picker. Each basket line shows the price rule that applied (a tier saving, a deal, a near-expiry markdown), the net content and "Contains: ..." for food, supplements and skin care, with the full ingredients one tap away, offline too.
- Deals apply on their own. When the basket is close to a deal the till nudges ("Add 1 more to get 3 for R800"). A promo code goes in the basket's code box; an invalid or under-spend code is refused with the reason.
- **Clear the basket** removes every item, the member and the code.

Members only: find or sign up the member

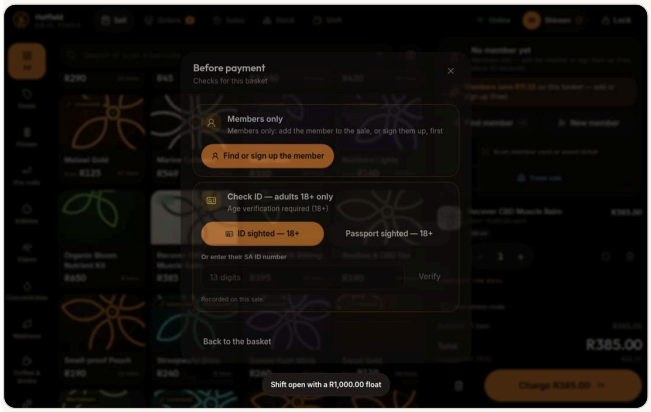

Figure 4.3 **Before payment.** The checks for this basket: "Members only: add the member to the sale, or sign them up, first", then "Check ID: adults 18+ only" with *ID sighted*, *Passport sighted* or the SA ID number.

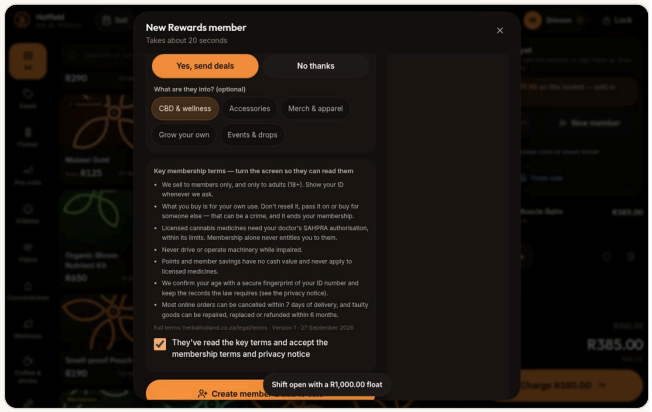

Figure 4.4 **New Rewards member: takes about 20 seconds.** Interests, the key membership terms to turn the screen for, the acceptance tick, and **Create member**. Above (out of shot): mobile, first name, surname, email, SA ID number or passport sighted, and the scripted deals question.

Every sale needs a member (HQ › Compliance › *Members only*, on by default). Tap **Find member** (F4) and search by phone, name or member number, or scan the QR on their card. The member card in the basket shows their tier, points, age verification, visits here, Founding number, any patient authorisation, and My Deals. New at Herbal Holland? **New member**:

1. Mobile number, first name, surname (optional), email for deals and invoices (optional).
2. **SA ID number** (checked on the till; only a secure hash and the last 4 digits are stored), or tick **Passport sighted (not an SA citizen)** and enter the date of birth from the passport. Anyone under 18 can't join or buy age-restricted products.
3. Ask the scripted question and record the answer: *"Can we send you member deals, drops and news by SMS and email? You can opt out any time: just reply STOP."* The exact question is stored with the answer as POPIA evidence; email is only opted in when an address was given. The till can't create the member until you have asked.
4. Optionally what they're into. Turn the screen so they can read the **key membership terms**, tick that they accept, and **Create member**. They get 25 points and their card by SMS-free sign-in on their phone later.

The sheet also shows a QR code the member can scan to join on their own phone (`/club/join?store=…`, tagged to your store for the join-sources report).

Age checks at the counter

Age-restricted items (THC, all CBD classes, hemp, accessories, grow) need a verified adult. A member whose ID number was checked or who was verified before passes automatically. Otherwise the *Before payment* sheet asks you to tick **ID sighted** or **Passport sighted** (recorded on the member and the sale), or to enter their SA ID number, which verifies them for good. Under 18: no sale, whatever document is shown. Every sale records how the buyer's age was confirmed (none · ID number · ID sighted · verified), and the age-checks report shows it.

4.4 Licensed dispensing: patients, quantities and the authorised dispenser

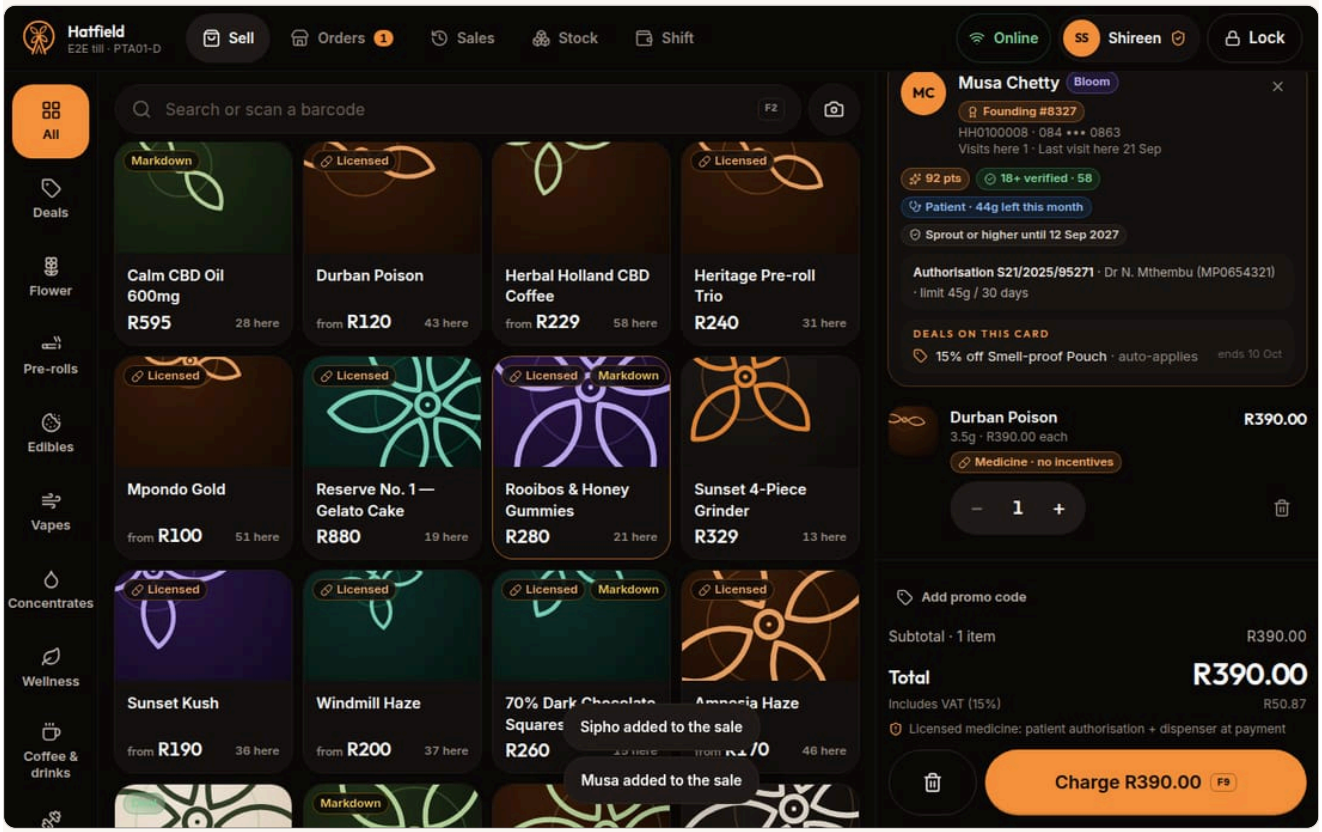

Figure 4.5 **A patient's basket.** The member card shows "Patient · 60 g left this month" and the authorisation (number, prescriber, limit); the line is marked *Medicine · no incentives*; the footer reads "Licensed medicine: patient authorisation + dispenser at payment".

RULES FOR LICENSED (THC) PRODUCTS IN MEDICAL MODE

- Only at a store whose **licence** covers the class (HQ › Stores › Licences); the licence reference prints on invoices.
- Only for a member with an **active SAHPRA authorisation** on file, and only within the **quantity left** this month (the authorised monthly grams less what was dispensed in the last 30 days, including open online orders). The till says "Exceeds the authorised quantity: 20 g left this month, 30 g in cart".
- Only an **authorised dispenser** may complete the sale. If the person signed in isn't one, the till locks and asks a dispenser to unlock; the basket is kept. The receipt then reads *Sold by …* · *dispensed by …*, the commission goes to whoever built the basket, and once the sale is done the till offers **Back to** the seller (their PIN) or to lock.
- **No incentives** (Medicines Act s18A): no deals, no member price, no markdown, no points earned or redeemed against it, no commission, never in a drop or a gift. The line says so.
- Never **offline**: the authorisation must be checked live. Remove the item or wait for the connection.
- Every licensed sale goes into the **dispensing register** with the patient, authorisation, prescriber, batch and dispenser (chapter 5 and 9).

Register a new patient's authorisation in the back office (Patient register); the till reads it at once.

4.5 Taking payment: tenders, split payments and points

A sale to a business on a trade account is rung up in **Trade sale** mode: ex-VAT trade prices, a full tax invoice, and "On account" as a tender within the account's terms. Chapter 7 has it.

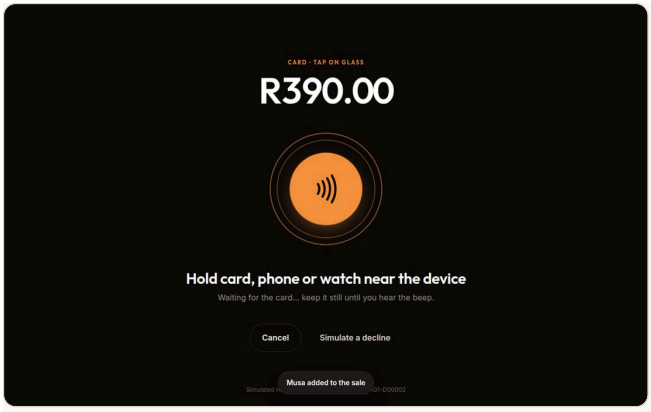

Figure 4.6 Card · tap on glass. "Hold card, phone or watch near the device": the simulated flow in the demo, and Halo Dot's app in production when that provider is chosen.

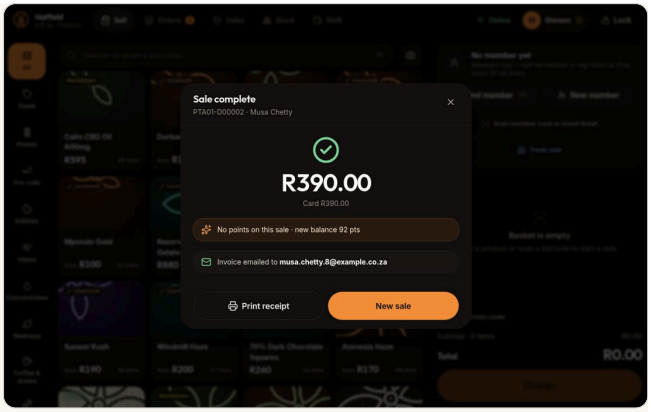

Figure 4.7 Sale complete. Card R390.00, "No points on this sale" (a medicine), the tax invoice emailed, print receipt or start a new sale.

1. Press **Charge** (F9). The till re-prices the basket on the server (My Deals and promo codes need it), runs the compliance checks, and opens the payment sheet with a receipt number reserved.
2. Choose a tender. The amount defaults to what's due; type a smaller amount to **split** ("Split payment: R… will still be due") and add the next tender.
3. Members with 20 points or more can put **points** towards the sale: whole points, up to their balance, up to 50% of the eligible amount, never against medicines.
4. Over R5,000, capture the **buyer's name, address and VAT number** for a full tax invoice; the till insists on it.
5. Complete the sale. Print the receipt or email the tax invoice (the member's email is pre-filled); an invoice that fails to send is retried by the scheduler for three days.

Tender	How it works	Needs a connection?
Card · tap	Tap on glass. Simulated in the demo (with "Simulate a decline" for training); Halo Dot Halo.Link when `HALO_APPLINK` is configured. Records the provider, reference, card brand and last four.	Yes
Card · Yoco	When the store's tap provider is `YOCO` : charge the amount on the store's Yoco machine, then key in the **reference the machine shows** (required) and the card's last 4 (optional). The machine has its own connection.	No (works offline)
Bank terminal	Any bank or fintech device the owner already has: charge it there and enter the **approval code** from the slip. The device has its own connection.	No (works offline)
Cash	Quick amounts (exact, then the next round notes) or another amount; change is calculated and shown on the receipt.	No
PayShap	Only where the store has entered the ShapID its bank issued (Store › Settings). The till shows the ShapID and the reference; the member pays from their banking app, and the cashier confirms from the store's payment notification.	Yes
Points	From 20 points; 1 point = R1; capped as above.	Yes
Gift voucher	Type the code (HH-XXXX-XXXX-XXXX) from the member's email or card, or scan it: scanning a voucher anywhere on the till opens payment with it looked up. The till shows what's on it and "valid until", takes up to the balance and what's due (type a smaller amount to use less; it can never take more), and the receipt says "Gift voucher HH-…" and what's left on it. Vouchers split with cash, card, PayShap and points. The voucher is redeemed on the server as the sale posts: a voucher that is used up, expired or short is refused by name, with the shortfall, and nothing is posted. Refunds go back onto the voucher first (a voucher is never cashed out); only the rest is paid out. Z-reports carry a "Gift vouchers" line.	Yes; never on a queued offline sale
Paid online	Only on online orders handed over at the till: the order was paid at checkout (any gift voucher used at checkout shows as its own "Gift voucher" tender).	—

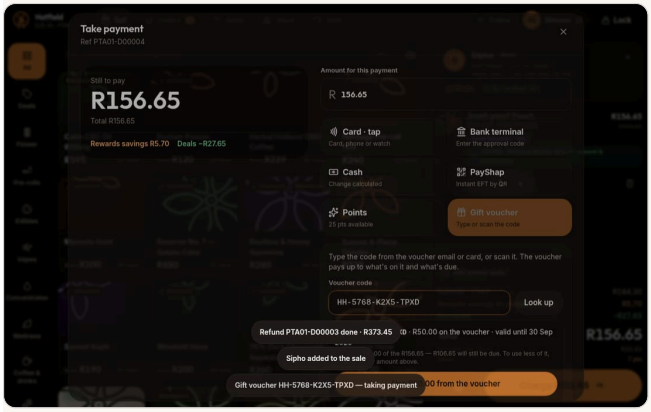

Figure 4.8 Gift voucher tender. Still to pay R156.65; the code typed or scanned, **Look up**, then "R50.00 on the voucher · valid until…" and **Pay R50.00 from the voucher**. The rest is still due and can be split with cash, card, PayShap or points.

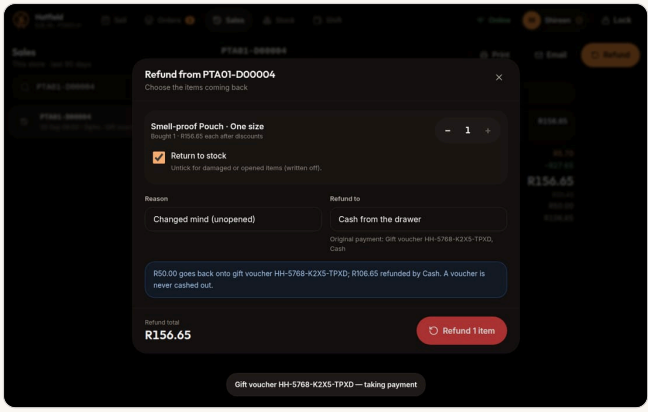

Figure 4.9 Refund with a voucher in the original payment. "R50.00 goes back onto gift voucher HH-…; R106.65 refunded by Cash. A voucher is never cashed out." The refund-to choice only covers the part that was paid in money.

Offline, the payment sheet says so and allows cash, or card on a bank terminal (or on the Yoco machine when that is the store's provider); tap on glass, PayShap, points and gift vouchers need the connection. The sale itself is posted on the server later (see *Offline mode*). A sale queued offline never carries a gift voucher: if the connection drops with a voucher on the sheet, the till says so and the cashier removes the voucher payment and takes another tender; a queued sale the server refuses stays in the outbox with the reason until a manager discards it (manager PIN, logged) after ringing it up again.

Receipts show each line's price and rule, deals and discounts, the Rewards savings in prices, VAT included (or "No VAT charged (store not VAT-registered)"), tenders and change, points earned and redeemed, the new balance, and the store's receipt footer. The member number is masked on receipts (HH••••002); the card keeps the full number.

4.6 Refunds

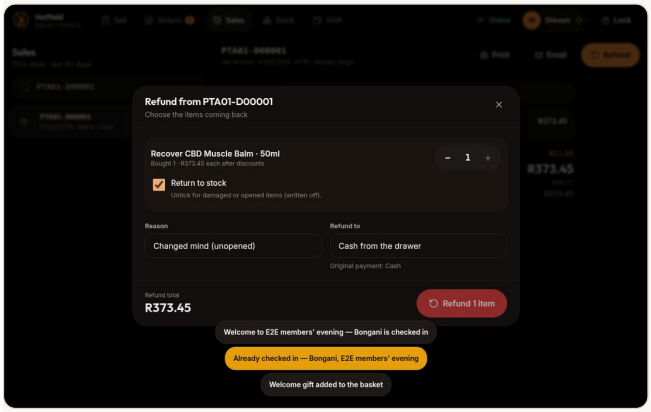

Figure 4.10 Refund from a sale. Choose the items coming back, tick "Return to stock" (untick for damaged or opened items, which are written off), a reason and where the money goes.

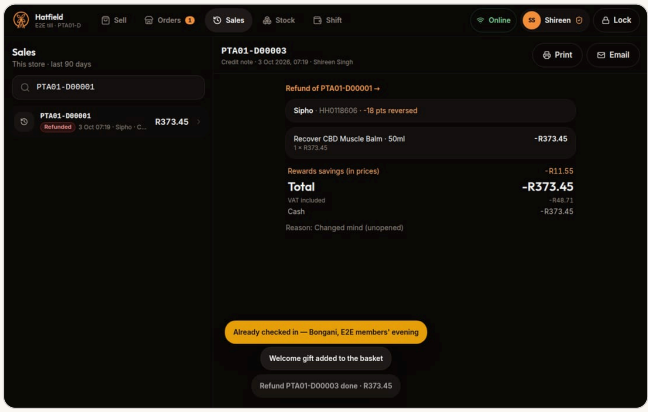

Figure 4.11 The credit note. A refund is a negative sale: the points earned are reversed (−18 pts), the Rewards saving is reversed, VAT is shown, and it appears in every report netted against the sale.

1. Open **Sales**, find the sale (last 90 days, this store) and press **Refund**.
2. Set the quantity per line coming back. **Return to stock** puts the units back into the same batch; untick it for damaged or opened items.
3. Choose a **reason**: Changed mind (unopened), Faulty product, Wrong item sold, Damaged packaging, Pricing error or Other. Then choose **Refund to**. **Back to how they paid** is the default: it splits the refund over the cash and card the sale was paid with, shown on the sheet (for example R100.00 cash · R290.00 to the card ending 0005). The approving manager can choose one tender instead, but never more cash than the sale took. A member advisor's refund needs a manager's PIN, and cash from the drawer needs an open shift.
4. Confirm. The credit note prints or emails like a receipt.

> **WATCH-OUTS**
> Card sales should go back to the card. A card sale refunded in cash, a refund of someone else's sale within 30 minutes, or a refund just before the shift closes, raises a *Suspicious refund* alert for the owner; a high personal refund rate, or refunds of your own sales, hold your commission until the alert is closed (chapter 11). Only sales can be refunded, never a refund.

4.7 Online orders: picking, handover with an ID check, dispatch

Trade click & collect orders (a business buying on its trade account) sit on the same board tagged **Trade · TO-...**. They are packed and marked ready in the back office; the till only **hands them over**: the buyer's 6-digit collection code and the ID tick, with nothing to take at the till. Chapter 7.

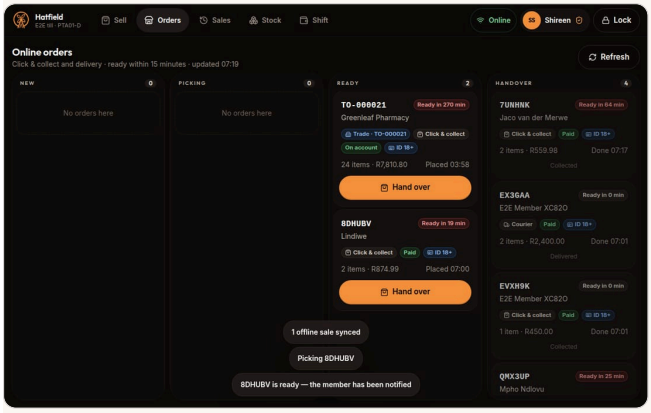

Figure 4.12 The board. New · Picking · Ready · Handover, each card with the member, fulfilment, "Pay R... in store" or "Paid", the ID 18+ badge, minutes since placed and the 15-minute SLA colour, and the next action.

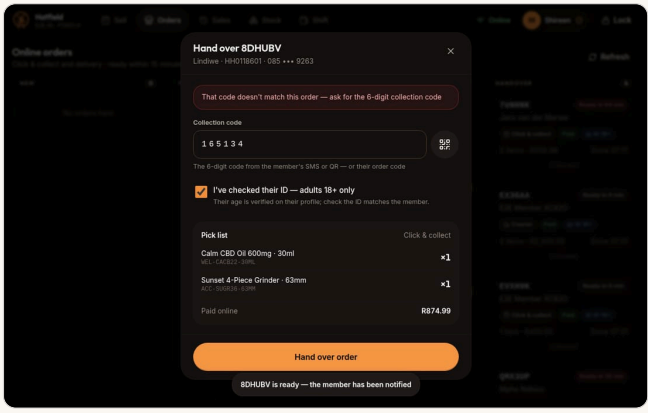

Figure 4.13 Hand over. The 6-digit collection code (typed or scanned from the member's QR; a wrong code is refused), the ID tick, the pick list and "Take payment of R..." for pay-in-store orders.

1. A new order rings in on the board (it refreshes every 20 seconds while online). Press **Start picking**: the pick list names the batches to take, first expiry first out.
2. Press **Ready**: a collection order texts the member their code; a delivery order waits for the driver.
3. **Hand over** a collection: ask for the **collection code** from the member's SMS or QR (or scan it), tick **I've checked their ID (adults 18+ only)** (required for age-restricted orders; the sheet says whether their age is already verified on their profile), take payment if it wasn't paid online, and complete. Licensed orders need an authorised dispenser to hand them over. The sale posts to this store, and the member's points are added.
4. **Dispatch** a same-day order: choose the courier or driver (Herbal Holland driver, The Courier Guy, Pargo, Bob Go, other) and a tracking number (or let the till generate one); the member is texted. **Mark delivered** when it's done; the driver checks ID at the door.
5. Delivery orders must be paid before dispatch; an order that isn't ready yet can't be handed over ("finish picking, then hand it over").

The back office has the same board with more detail (chapter 5); either place can do the work.

4.8 Event check-in and welcome gifts

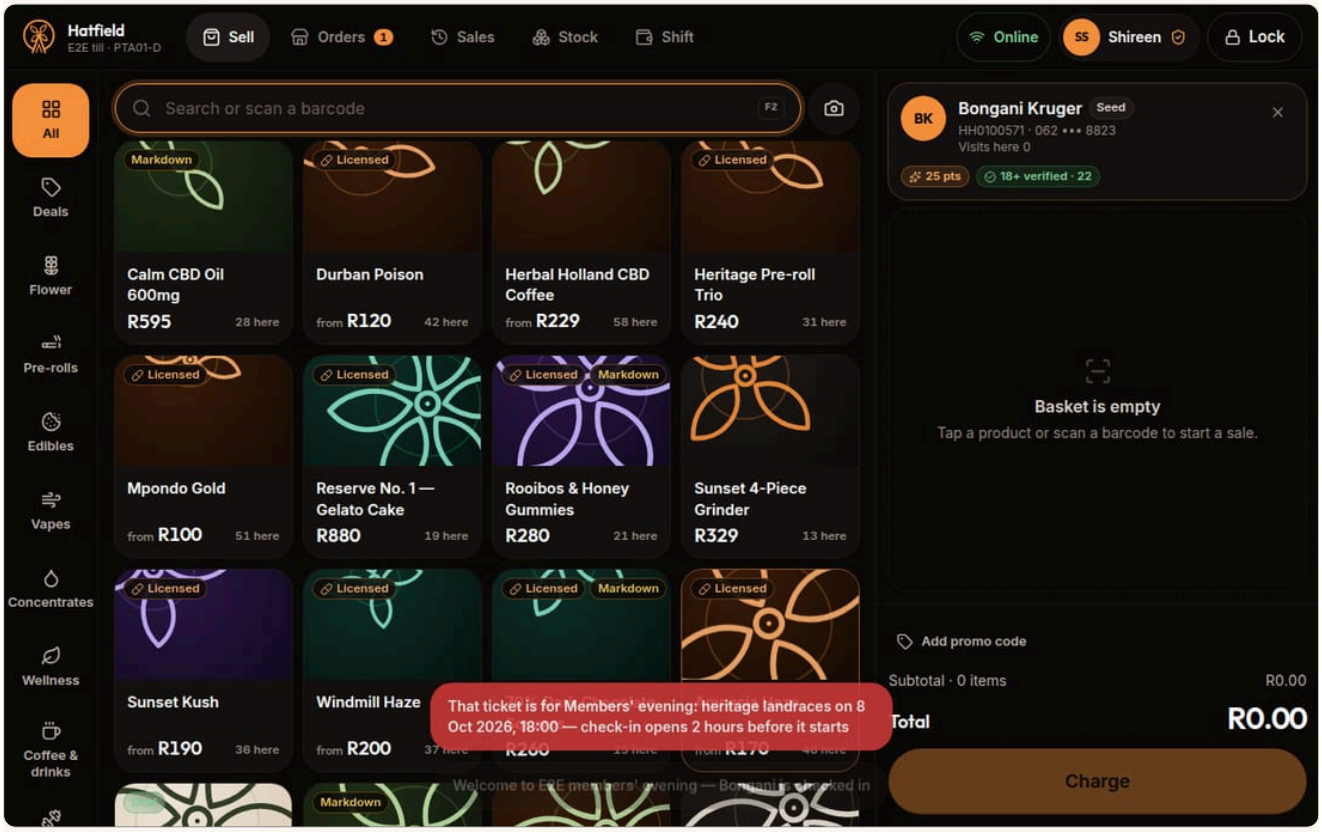

Figure 4.14 **Ticket scanned.** The member is attached to the sale and welcomed; too early, and the till says when check-in opens ("2 hours before it starts").

At the door of an event, scan the ticket QR in the guest's Rewards card (or type `HHRSVP:` and the code into the member search). Check-in opens two hours before the event at the hosting store, on the day; the member is attached to the basket, and a first-purchase **welcome gift** promotion is added when one is running. The event's door list (CSV, in the back office) is the paper fallback. Check-in needs a connection.

4.9 Offline mode and sync

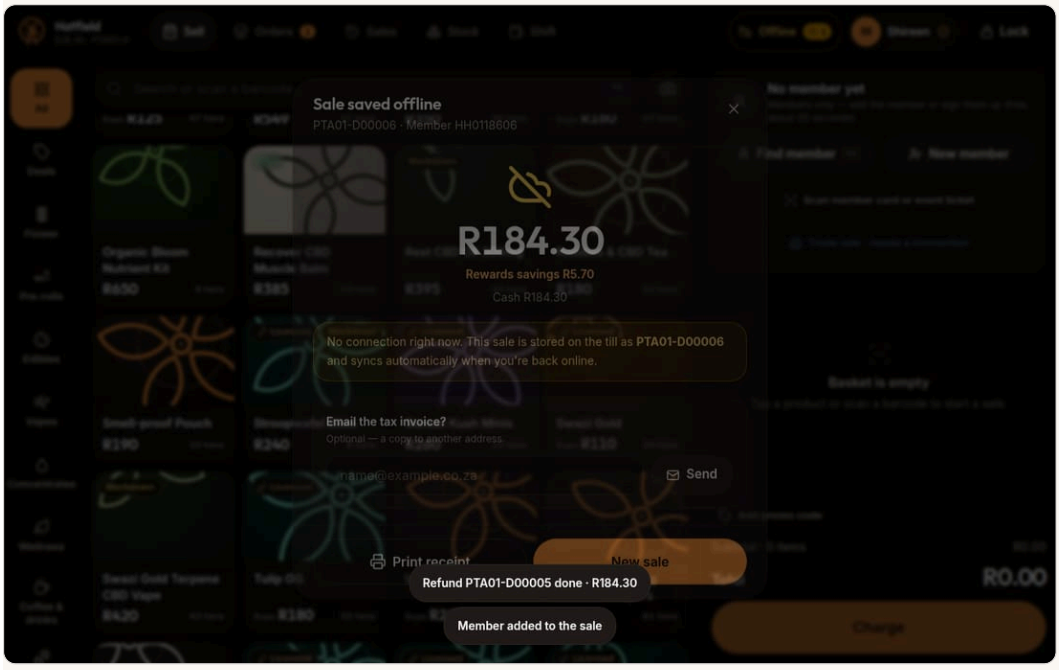

Figure 4.15 **Sale saved offline.** "No connection right now. This sale is stored on the till as PTA01-B00004 and syncs automatically when you're back online."

The till caches everything it needs (the catalogue with prices, stock and product facts, promotions, price lists, drops, the compliance settings, the staff list and the current shift) and refreshes it every three minutes while online (or by hand: Shift › **Refresh catalogue**). When the connection drops:

- It **keeps selling** with cached prices: cash, or card on a bank terminal or the Yoco machine. Tap on glass, PayShap, points, opening or closing a shift, licensed medicines, drops, event check-in and member lookup all wait for the connection.

- A member is attached by typing the **member number from their card** ("Taken from their card offline (checked when the till reconnects)"). An unknown number is recorded as a compliance exception for HQ to review, not lost.
- Receipt numbers come from the till's own sequence, so they stay unique; each sale gets a unique id, so a sale is never posted twice however often the sync retries.
- Queued sales sync every 15 seconds once online (idempotently); the badge shows how many are waiting, and a toast confirms "2 offline sales synced". Anything the server couldn't check offline (an age rule, a limit) is written to the audit log rather than rejecting a sale that already happened.

> **NEVER CLEAR BROWSER STORAGE ON A TILL WITH QUEUED SALES**
> The outbox lives in the browser. Check the queue badge is zero before closing the shift or unpairing. If a till must be replaced, sync it first.

4.10 Till hardware: receipt printer, cash drawer, scanners and the customer display

Every till works on a tablet or phone with nothing attached: receipts open in the browser's print dialog as an 80 mm slip, the camera or a keyboard scanner reads codes, and the customer display is a browser window. The hardware below is optional and set up per device under **Shift › This till**; the settings stay on that device and nothing about it is stored on the server.

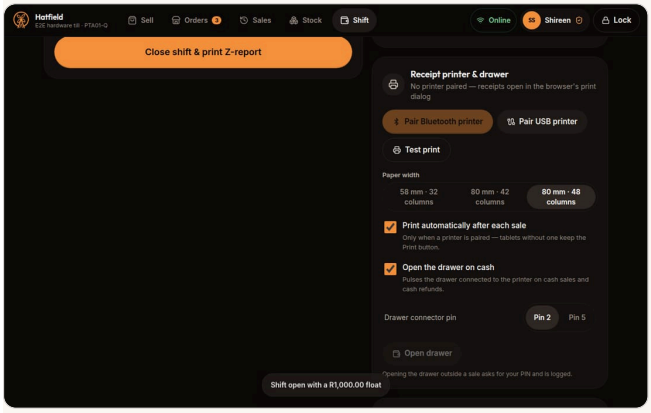

Figure 4.16 **Receipt printer & drawer.** "No printer paired, so receipts open in the browser's print dialog"; Pair Bluetooth printer, Pair USB printer, Test print; the paper width (58 mm · 32 columns, 80 mm · 42 or 48 columns); Print automatically after each sale; Open the drawer on cash; the drawer connector pin; Open drawer.

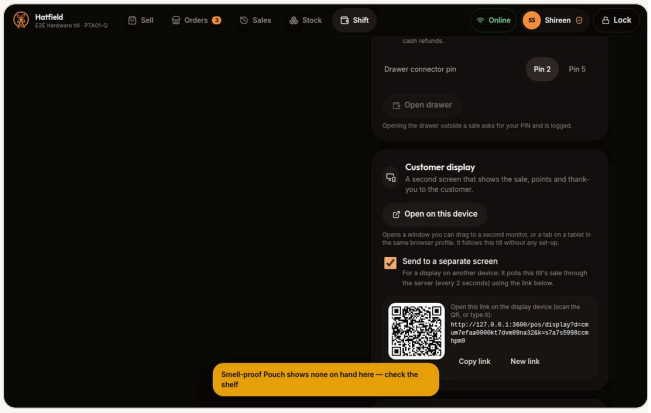

Figure 4.17 **Customer display.** "Open on this device" for a second window or tab; "Send to a separate screen" shows the link and QR code to open on the other device, with Copy link and New link.

Receipt printer (ESC/POS)

1. Turn the printer on. Under **Shift › This till › Receipt printer & drawer** press **Pair Bluetooth printer** (or **Pair USB printer**; on Android use an OTG cable) and pick it in the browser's chooser. Any 58 mm or 80 mm ESC/POS printer with Bluetooth LE or USB works (Xprinter, Sunmi and GOOJPRT portables, Epson TM-m30 / TM-T20 and Bixolon over USB) in Chrome, Edge or Samsung Internet on Android, ChromeOS, Windows, macOS or Linux, over https.
2. Choose the **paper width** and press **Test print**: a test page with accents, bold, double height and a QR code. If the right-hand column wraps, choose a narrower width.
3. The printer is remembered on the device. After a reboot the till reconnects on the first print; Bluetooth may need one tap on **Reconnect**. **Forget printer** goes back to the print dialog.

Print automatically after each sale prints with the sale; it only applies once a printer is paired, so tablets without one keep the Print button. What prints: the store, legal entity and VAT number, every line with VAT, tenders and change, points earned and redeemed, the member's name with a masked number, a QR code and link to the signed invoice page, the licence reference and the dispensing wording where a line is a licensed medicine (and the s18A line for CBD supplements), and "Adults 18+ only. Keep out of reach of children." Refunds print as credit notes; X- and Z-reports print through the same printer. Receipts are never queued: the sale syncs when the till is offline, the paper prints locally at once.

> **NOT SUPPORTED**
> iPhone and iPad (print through AirPrint from the print dialog), Firefox, and classic-Bluetooth "SPP" printers, which Web Bluetooth can't reach. For those, use their USB port or a BLE model. On Windows, "Couldn't claim the printer's USB interface" means the vendor driver holds the port: swap it for WinUSB with Zadig, or use Bluetooth.

Cash drawer

A drawer wired to the printer's DK (RJ11) port. **Open the drawer on cash** pulses it on cash sales and cash refunds. *Pin 2* suits most drawers; choose *Pin 5* if nothing happens. **Open drawer** outside a sale asks for a manager's PIN and is written to the audit log (`pos.drawer_open`; queued on the till and posted on the next sync when offline). There is no drawer without a printer, and the till says so.

Scanners

A USB or Bluetooth **keyboard-wedge scanner** works on every screen with no set-up: scan anywhere and the till recognises product barcodes, member card QR codes, event tickets, collection QR codes and batch codes. **Camera scanning** (the camera button next to the search box, or "Scan member card or event ticket" in the basket) uses the browser's own barcode reader (Chrome, Edge and Samsung Internet on Android; Chrome on ChromeOS and macOS) with a viewfinder and a torch switch where the camera has one, for EAN-13, EAN-8, UPC, Code 128, Code 39 and QR. A browser without it says "Not supported on this browser" and lists what works everywhere. A pack's batch code, or its certificate QR, opens the batch: status (recalled, on hold or expired in red or amber), dates, potency, the laboratory and how many of that lot are on the shelf here.

Customer display

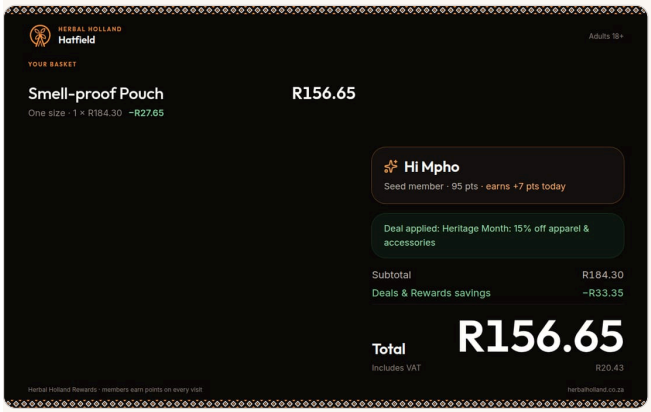

Figure 4.18 **During the sale.** "Your basket" line by line with the deal on each, "Hi Mpho · Seed member · 95 pts · earns +7 pts today", the deal applied, the subtotal, "Deals & Rewards savings" and the total large.

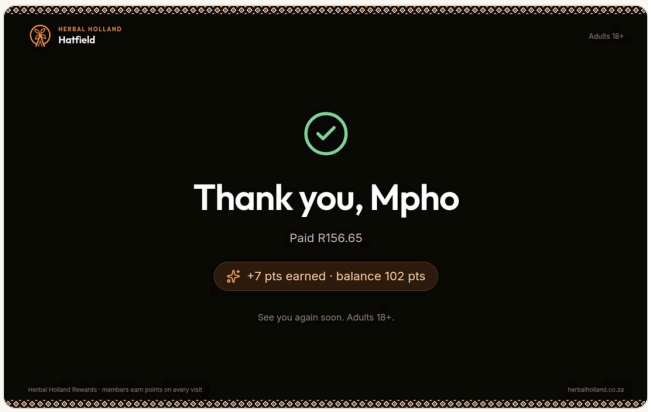

Figure 4.19 **Thank you, Mpho.** "Paid R156.65", "+7 pts earned · balance 102 pts", "See you again soon. Adults 18+."

Shift › This till › Customer display › Open on this device opens `/pos/display` in a window you can drag to a second monitor, or a tab on the same tablet; it follows the till through the browser with no set-up and no server. For a screen on another device, such as a tablet facing the member, tick **Send to a separate screen** and open the link or QR code it shows on that device: the display polls the till's sale through the server every two seconds, keyed by the paired till and a pairing key (**New link** revokes the old one). It shows the lines, the deals applied, the member's first name and points, "Tap to pay" with the amount due, then the change and the points earned, and between sales it cycles brand messages: today's deals (never on medicines) and the next event. It never shows a phone number, a member number or the name of a licensed medicine ("Dispensed medicine"). Tap the display for full screen; it asks the device to keep the screen awake.

4.11 Training mode and quiet hours

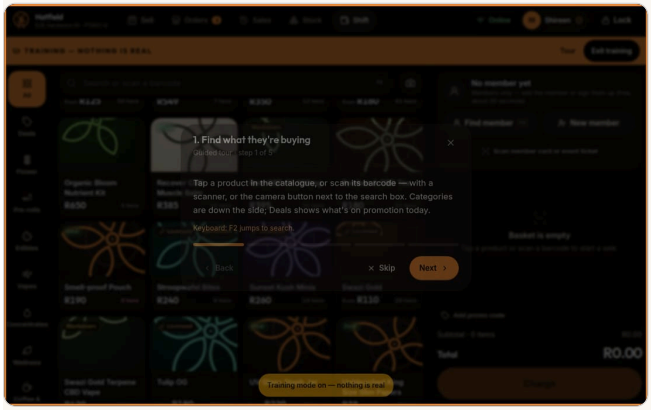

Figure 4.20 **Training mode.** The orange outline, the banner "TRAINING: nothing is real" with Tour and Exit training, and step 1 of the five-step tour: "Find what they're buying".

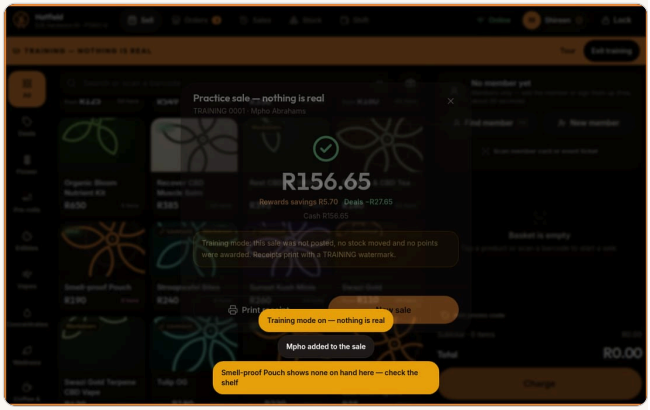

Figure 4.21 **A practice sale.** "Practice sale: nothing is real · TRAINING 0001": the total, savings and deals as they would be, and the note that nothing was posted, no stock moved and no points were awarded.

A manager starts training under **Shift › This till › Training mode › Start training** (a cashier's tap asks for a manager's PIN). The till puts an orange outline around everything and the banner **TRAINING: nothing is real**, and a five-step tour walks a new cashier through search and scan, the member, the basket, charging and the receipt. Everything runs on a sandbox: practice sales are numbered `TRAINING 0001…` and never posted or queued, never move stock or award points; sign-ups and age checks are simulated on the till; receipts print (or open in the print dialog) with a TRAINING watermark; the drawer stays shut; online orders, refunds, opening or closing a shift and invoices are refused with a message; the customer display carries a training banner. Practice receipts are listed under **Sales** to re-print or to practise a refund. **Exit training** needs a manager's PIN; starting and ending are audited. Real sales queued before training started still sync.

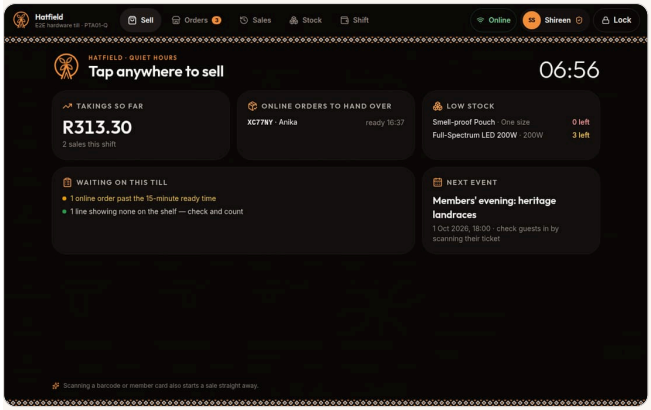

Figure 4.22 **Quiet hours.** "Tap anywhere to sell": takings so far this shift, online orders to hand over, low stock, what's waiting on this till, and the next event.

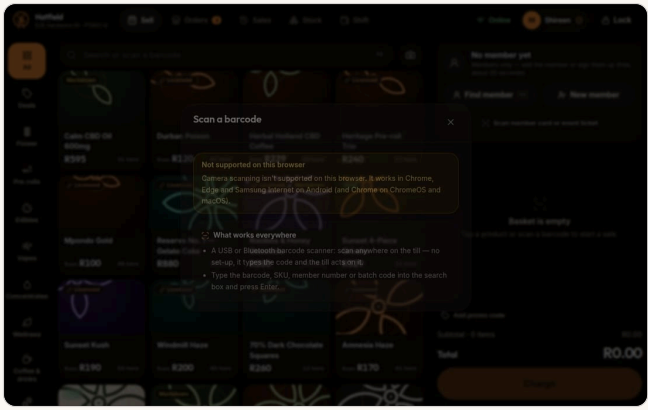

Figure 4.23 **Scan a barcode.** On a browser without camera scanning the till says so, and what works everywhere: a USB or Bluetooth scanner, or the code typed into the search box.

Quiet hours: with no sale open and no touch for three minutes the Sell screen becomes a calm dashboard built from what the till already holds: takings so far this shift, click & collect orders ready to hand over, lines with three or fewer on the shelf, what's waiting on the till (no shift open, offline sales to sync, an order past the 15-minute ready time, lines showing none on the shelf, a catalogue not refreshed for six hours) and the store's next event. Any tap, key or scan returns to selling, and a scanned barcode or member card starts the sale straight away. Nothing moves when the device prefers reduced motion.

4.12 Stock lookup, commission and the menu board

Stock looks up any product's on-hand and available quantity here (available = on hand − units reserved for open online orders). **Shift › Your commission this month** shows what the signed-in person has earned on their own till sales at HQ's rates, after refunds, once the owner has switched commission on (chapter 5).

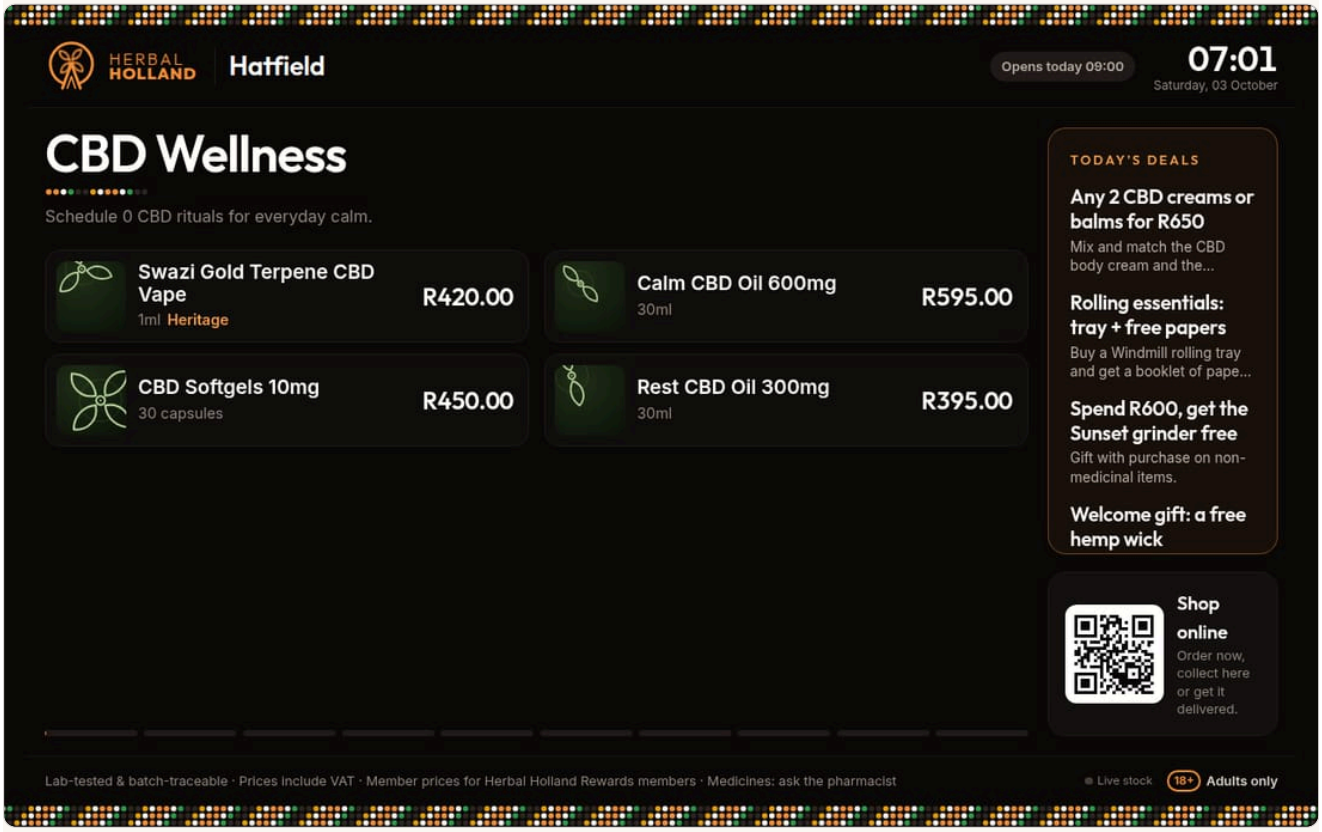

Figure 4.24 **The menu board** (`/menu/hatfield`): the store, whether it's open, the time; a rotating category with prices; Today's deals; "Shop online" with a QR code; the footer "Lab-tested & batch-traceable · Scan any pack for its certificate · Prices include VAT · Adults only".

The menu board is a page for the store's TV: open it full-screen in a browser at `/menu/<slug>` (the back-office sidebar links it). It rotates the categories on its own, refreshes its data every minute, shows the day's deals, a live or coming drop with "Get notified when the drop opens", the next event ("Fully booked, thank you!" once it is), and a QR code to the shop. In medical mode licensed products are never listed; a Dispensary panel points patients to an authorised dispenser instead (only at stores licensed to dispense).

Run it in a kiosk browser on the TV or its stick (Chrome with `--kiosk`, Android TV with a kiosk app, or a Raspberry Pi): landscape and portrait both work, the cursor is hidden, categories rotate every 12 seconds, sold-out lines grey out with "Sold out", the page reloads its content from the server every ten minutes, and it asks for a screen wake lock (https only; otherwise turn off the device's screen timeout). Member prices show only on classes where the law allows incentives. Nothing on the board needs a login.

5

CHAPTER 5

The store back office

Every section in the sidebar, for store managers and franchisees: the **Today** list, **orders, stock, buying, members and patients, money, reports, alerts, the team and settings**. What each shows, what you can do, the rules behind it, and how to work the lists faster.

IN THIS CHAPTER

5.1 Overview: the Today list, the store dashboard, and "All my stores"

5.2 Online orders

5.3 Support tickets and returns

5.4 Inventory: stock on hand, stock takes, adjustments, batches and recalls

5.5 Buying: purchasing from the DC, network trading, and your prices

5.6 Members, the patient register, local marketing and events

5.7 Money: finance, cash-ups, banking, expenses, commission and the statement

5.8 Insight: reports and loss prevention

5.9 Store: team and PINs, HQ updates, the menu board, settings

5.10 Working faster: lists, saved views, keyboard shortcuts and editing in place

5.1 Overview: the Today list, the store dashboard, and "All my stores"

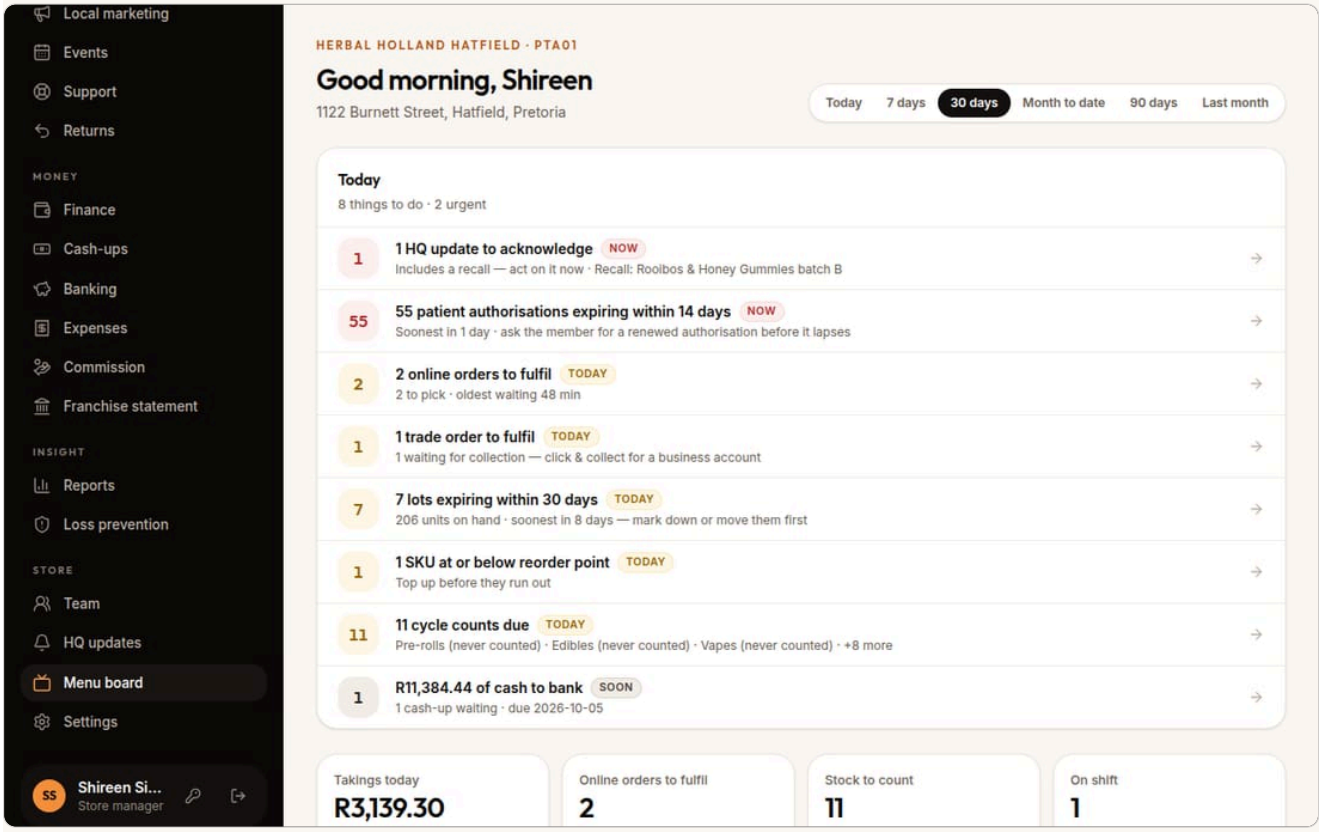

Figure 5.1 Today. "6 things to do · 1 urgent": patient authorisations expiring (NOW), online orders to fulfil, cash to bank, lots expiring within 30 days, SKUs at or below reorder point and cycle counts due (TODAY), each with a count, one line of context and a link to the page that fixes it.

The overview leads with what the person acts on. A **store manager** sees the **Today** list first: the store's to-do list, most urgent first, built from live facts against thresholds HQ sets. It covers online orders to fulfil (with how long the oldest has waited), loss-prevention alerts open (never about the person looking), cash past its banking deadline or due, HQ updates to acknowledge (a recall is always *NOW*), lots expiring within 30 days, SKUs at or below reorder point, cycle counts due by category (never counted, or older than the cadence), patient authorisations expiring within 14 days, and supplier invoices overdue or due within 7 days. Each row is *NOW*, *TODAY* or *SOON*; when there is nothing, the card says "Nothing needs your attention right now". Then **Takings today** against the same day last week, **Online orders to fulfil**, **Stock to count** and who is **On shift**, and the range figures below. An **owner, area manager or HQ person** opening a store sees the money first (Takings today, Gross margin, **Cash to bank** with anything overdue in red, Online orders open and Loss-prevention alerts), with the Today list under it.

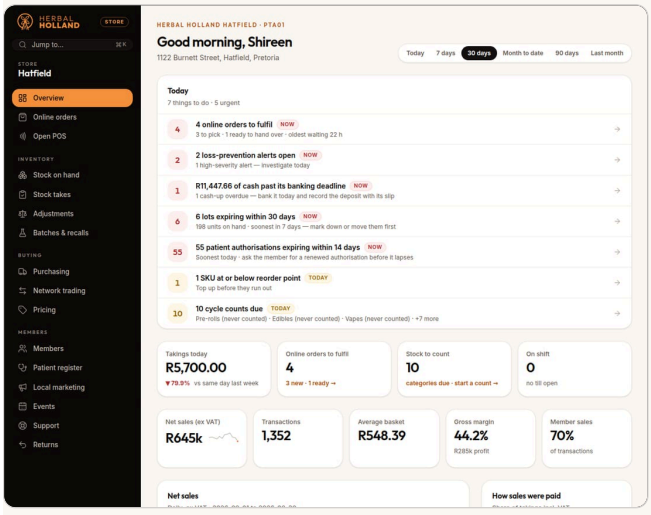

Figure 5.2 A manager's morning. The Today list ("7 things to do · 5 urgent"), then Takings today, Online orders to fulfil, Stock to count and On shift.

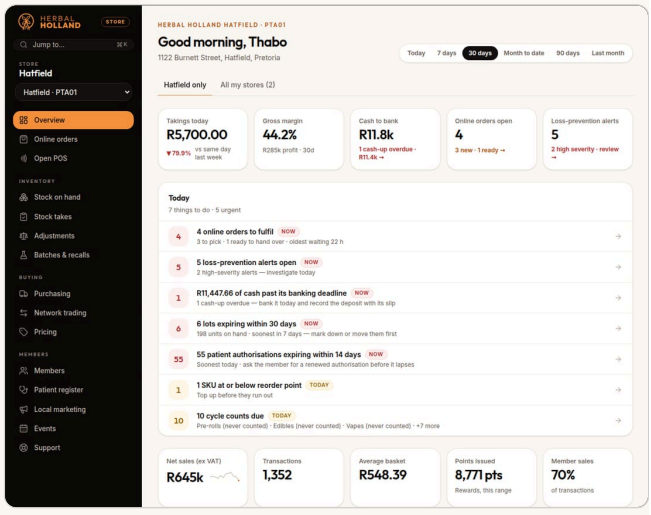

Figure 5.3 The owner's view of the same store. Takings today, Gross margin, Cash to bank ("1 cash-up overdue"), Online orders open and Loss-prevention alerts, then the Today list; "Hatfield only" or "All my stores (2)".

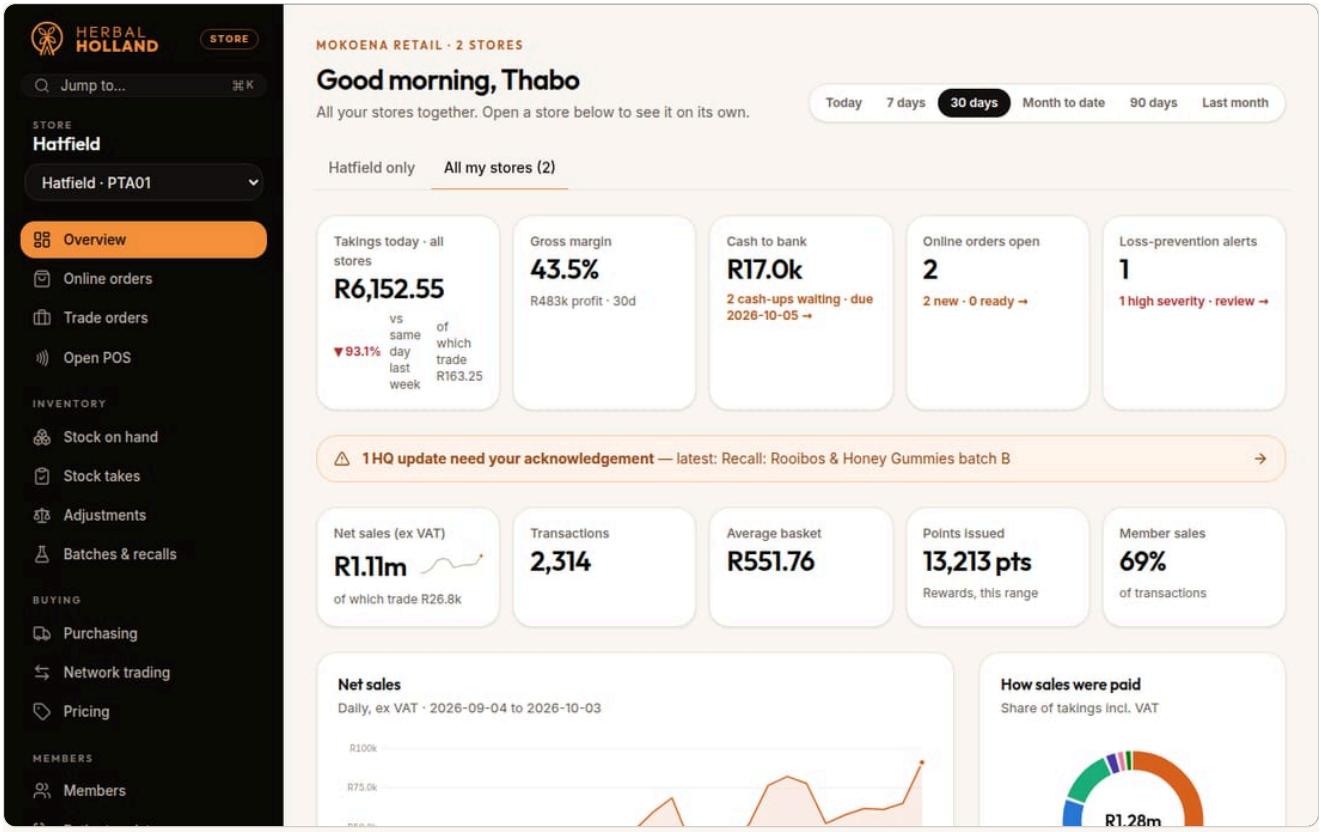

Figure 5.4 **All my stores.** An owner with two stores sees them together: net sales ex VAT, transactions, average basket, gross margin, member sales; net sales by day; how sales were paid; and an HQ update that needs acknowledging. "Hatfield only" switches to one store.

The overview takes a date range (today, 7 days, 30 days, month to date, 90 days, last month) and shows **Net sales (ex VAT)**, **Transactions**, **Average basket**, **Gross margin** and **Member sales** (share of transactions with a member), the daily net-sales chart, **How sales were paid**, **Best sellers**, **Stock health** (at or below reorder point, expiring within 30 days, recalled or quarantined on hand, negative stock lots), **Today at the counter** and any HQ announcements needing acknowledgement. Owners of more than one store land on *All my stores*: consolidated figures, a store comparison with each store's exceptions to drill into, and CSV export. Every report takes the same toggle. A single-store manager only ever sees their store. The sidebar's **Open POS** goes to the till.

5.2 Online orders

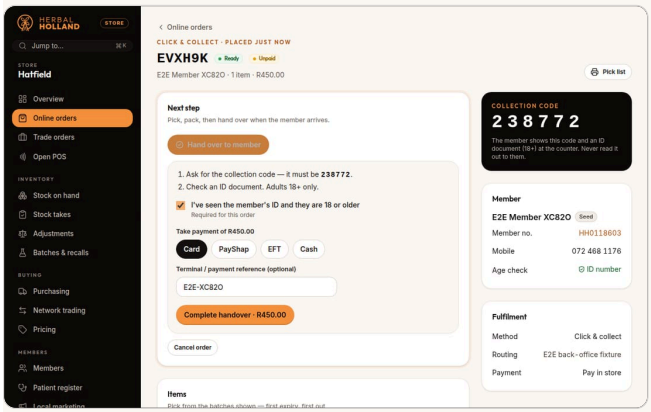

Figure 5.5 **An order at "Ready".** Next step, the collection code the member must show, the ID check, payment for a pay-in-store order, the member, and the fulfilment details (method, routing, payment).

Click & collect and delivery orders routed to your store, oldest first while there is work to do; search by order code, member name or number; tabs by status. Stock is reserved from the moment an order is placed until it is handed over, dispatched or cancelled.

An order's page shows the lines with the **batches to pick** (first expiry first out), a printable **pick list**, the timeline of every status with who and when, the member (number, mobile, age check), fulfilment (method, courier, tracking, routing note, payment, reference, ID checked) and the next step.

- **Start picking › Ready › Hand over**: the same rules as the till (collection code, ID tick, payment, dispenser for licensed orders). Cash can only be taken through an open till shift, so take card, PayShap or EFT here, or hand over at the POS.
- **Dispatch** a delivery with the courier and tracking number; **Mark delivered** when the courier confirms.
- **Merch shipped**: for made-to-order merch, enter the courier and tracking from the partner's email; the member is texted.
- **Cancel** releases the stock, returns points, and refunds an online payment in full first (if the gateway refuses, nothing changes and you see why).
- "Not enough stock to fill this order" warns when the shelf no longer covers it.

Click & collect orders from *business* accounts (the trade channel) have their own list, **Trade orders**, with the same pick › ready › hand over steps and a handling fee (chapter 7).

5.3 Support tickets and returns

Two sidebar items for when something isn't right. **Support** lists the tickets about your store and its members: open a ticket to read the conversation, **reply** (the member is emailed), **assign** it to someone on the team, set a **priority**, and **resolve** it; the service-level clock (first reply within 1 business day, resolved within 5) shows on every ticket, and a member's reply reopens it. **Returns** lists return requests on orders your store fulfilled, with the items, the reason and the window they

fall in: **Approve** or **Decline** with a reason, **Book the courier collection**, mark it **Received** once it arrives (check the item: consumables and skin care must be unopened and sealed for a change of mind), and **Refund**; the member is told at each step. HQ sees every ticket and return across the network (chapter 6).

5.4 Inventory: stock on hand, stock takes, adjustments, batches and recalls

Stock on hand

Every ranged item at your store: **on hand**, **reserved** for online orders, **available**, reorder point and par, sold in 28 days, value at cost, and a status (out of stock, at or below reorder point, overstock). Filters by category and stock status; search by product, SKU or barcode; export CSV. The tiles show stock value at cost, out of stock, at or below reorder point, tied up in overstock, and reserved for online orders.

An item's page adds days of cover and sales velocity, the **batches** on hand in the order the till sells them (first expiry, first out) with their certificates, the stock levels you set (**Reorder point** "reorder at or below" and **Par level** "order up to"; par must be at least the reorder point), price and margin (RRP, your shelf price, wholesale cost, margin), what is held for online orders, and the **movement ledger**: every unit in and out, newest first, with the running balance.

Stock takes (full counts and cycle counts)

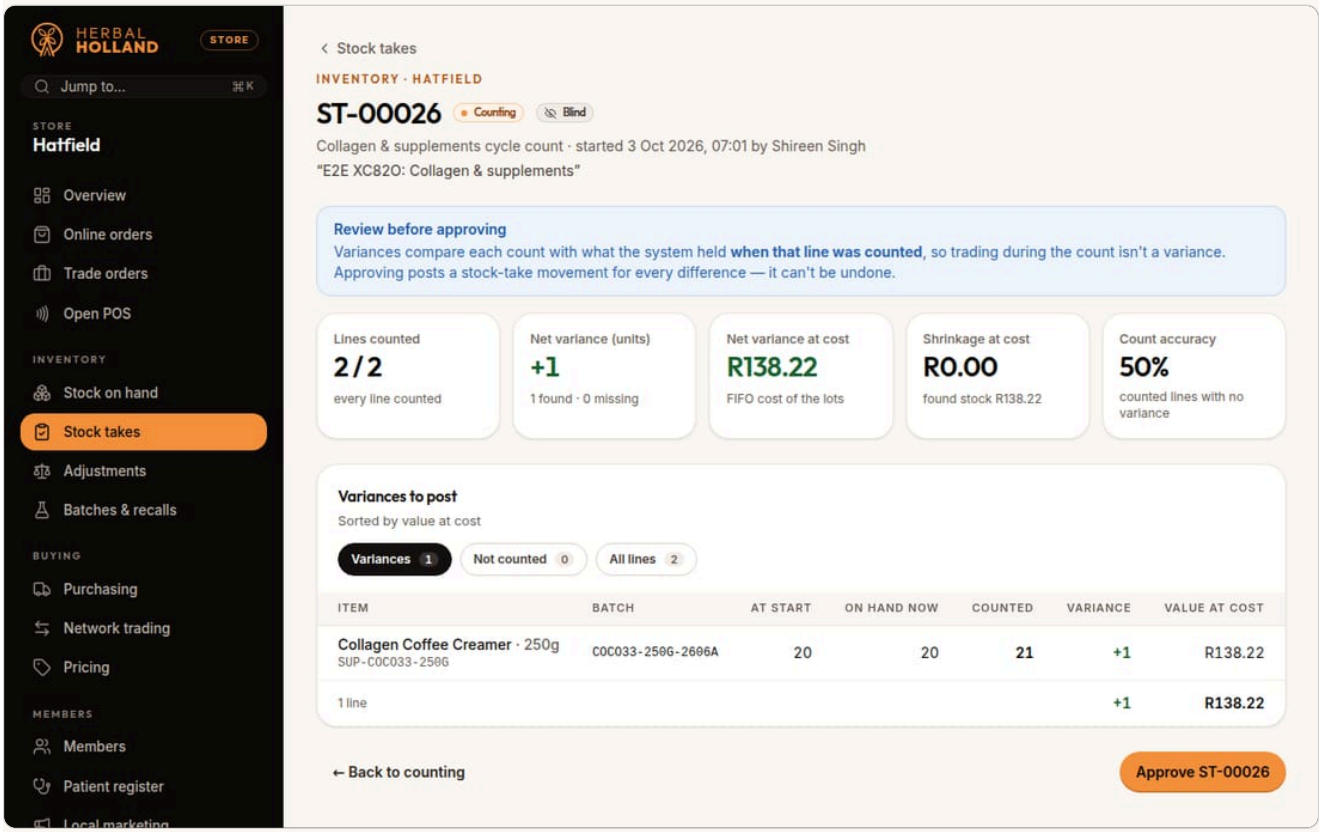

Figure 5.6 **Review before approving.** A blind cycle count of one category: lines counted, net variance in units and at cost, shrinkage at cost, count accuracy; the variances to post, sorted by value; Approve.

1. **New stock take**: a full count, or a **cycle count** of one category. Counts are **blind** by default: counters don't see the system quantity. Only one count can be in progress at a time.
2. Count and enter whole numbers per line (batch by batch). The system snapshots the on-hand figure when each line is counted, so trading during the count doesn't read as a variance.
3. **Review before approving**: variances by value at cost, "not counted" lines, shrinkage. Print the variance report if you like.
4. **Approve & post variances** writes a COUNT movement for every difference to the ledger, at FIFO cost, and in the audit log. Approval can't be undone. **Cancel count** posts nothing.

Adjustments

Write stock off or on against a specific batch, with a reason; every adjustment lands on the ledger at FIFO cost and in the audit log. Scan or search the item, pick the batch, choose why:

Reason	Direction	Use it for
Damaged	out	Broken or unsellable packaging
Expired	out	Past its expiry date
Theft	out	Add the SAPS case number in the note
Lost / missing	out	Can't be found
Sample / tester	out	Opened for display or staff training
Quality issue	out	A complaint or a failed inspection
Recall return	out	Sent back to the distribution centre

Reason	Direction	Use it for
Destroyed (witnessed)	out	The destruction register: a **witness must be named** (cannabis waste)
Found	in	Stock found that the system didn't know about
Correction	either	Fix a capture error, and say what happened

The page shows the net impact and movement count for the period, where stock is going, and the history with search. Quantities are whole numbers up to 10,000; you can't write off more than the lot holds.

Batches & recalls

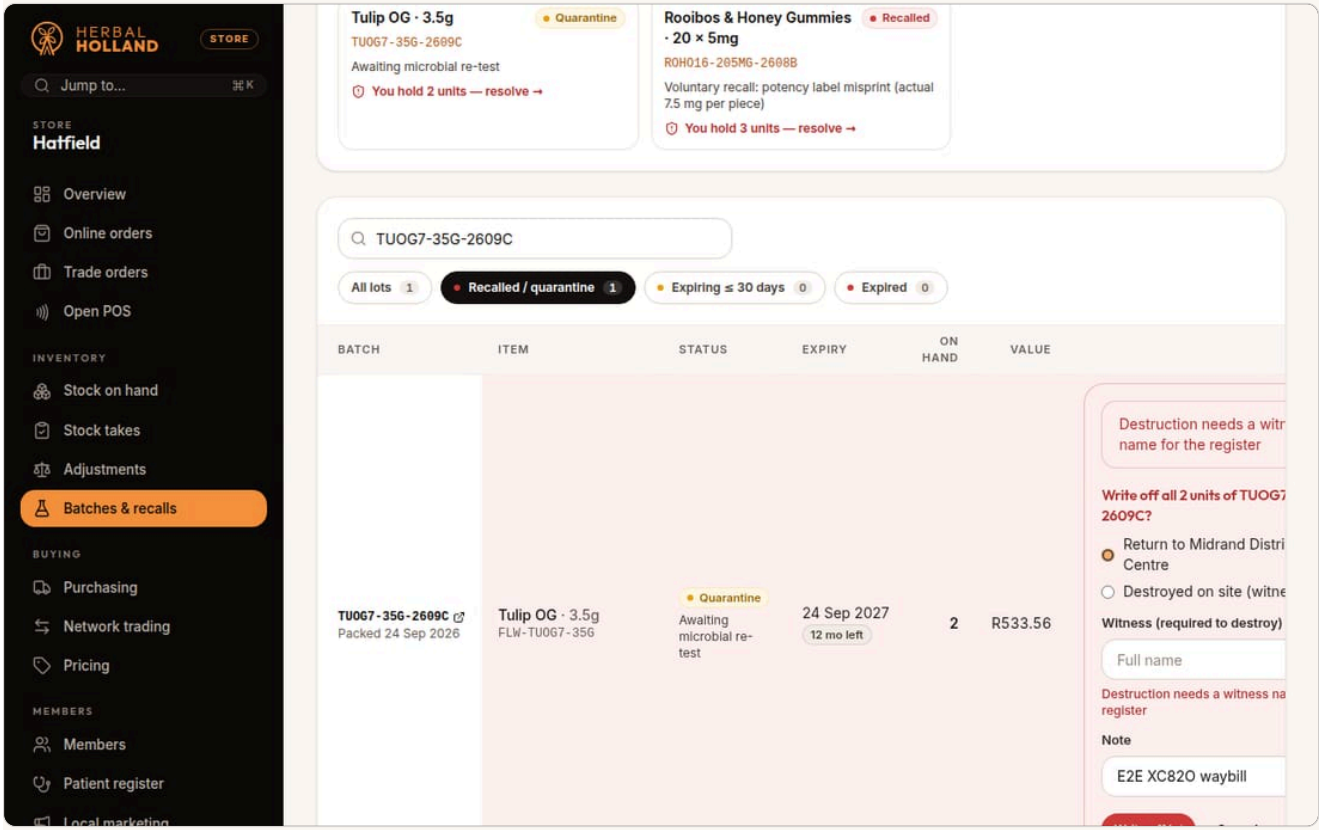

Figure 5.7 **Write off a blocked lot.** A quarantined batch ("Awaiting microbial re-test") with "You hold 2 units · resolve": return to the distribution centre, or destroy on site with a witness and a note.

Every lot on hand, traceable to its certificate of analysis, with units on hand, blocked units (recall or hold), expiring within 30 days and expired. **Network recalls & holds** lists batches HQ has blocked and what you hold of each: recalled and quarantined batches are blocked at the till, the DC and the web shop instantly. Resolve them here with **Recall return** to the DC (with the waybill in the note) or **Destroyed** with a witness, and expired lots with **Expired**. An unexpired lot can't be written off as expired.

5.5 Buying: purchasing from the DC, network trading, and your prices

Purchasing (wholesale orders from your distribution centre)

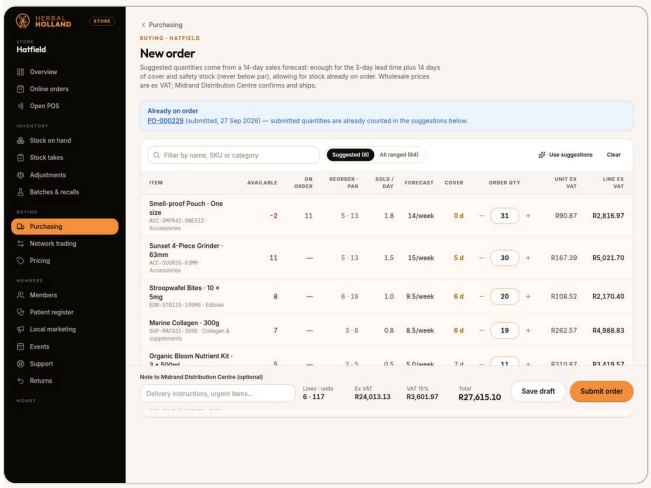

Figure 5.8 New order. Suggested (6) or All ranged (64); per item: available, on order, reorder · par, sold per day, the forecast per week, days of cover and the order quantity; "Already on order" with PO-000229 and "Submitted quantities are already counted in the suggestions below"; wholesale prices ex VAT; a note to the DC; save draft or submit.

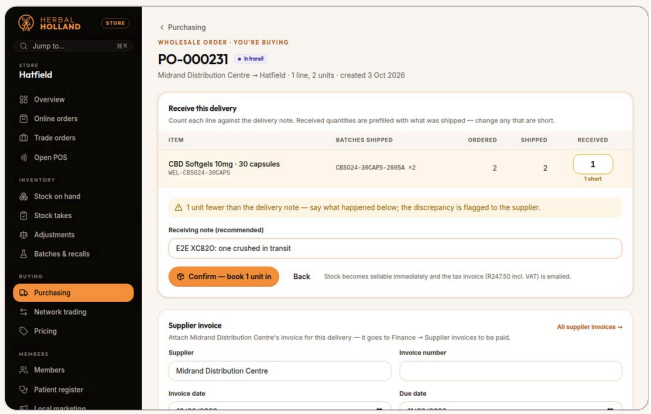

Figure 5.9 Receive this delivery. Count each line against the delivery note (prefilled with what was shipped), note any shortfall, confirm: stock is sellable immediately and the tax invoice is emailed.

1. **New order**: the builder lists every ranged item with available, on order, reorder · par, sold per day, the **forecast** (units a week), days of cover and a **suggested** quantity; *Use suggestions* fills them all. The suggestion comes from a 14-day sales forecast: reorder once what you have and have on order can't cover the 3-day lead time plus safety stock for the swings in daily demand (or falls to the reorder point), and top up to the lead time plus 14 days of cover: never below par, in whole packs, allowing for stock already on order. Lines for items you already hold more than twice par of are flagged. Save a draft or **Submit**.
2. The DC **approves** (or rejects with a reason), picks first-expiry-first-out and **ships**; you see the batches on the way and the timeline. You can cancel while it's only submitted or approved.
3. **Receive**: the received quantities are prefilled with what was shipped; change any that are short and say what happened; discrepancies are kept and flagged to the supplier. Confirming books the same batches in at the agreed cost; the DC's **tax invoice** for what you actually received is emailed, put on your Supplier invoices as *On statement* and settled on your monthly franchise statement, with nothing to capture or pay.

The purchasing page tracks on order, deliveries to receive, received this month and items below reorder point. Quantities are whole numbers up to 10,000; a store not yet linked to a DC is told to ask HQ.

Network trading (store to store)

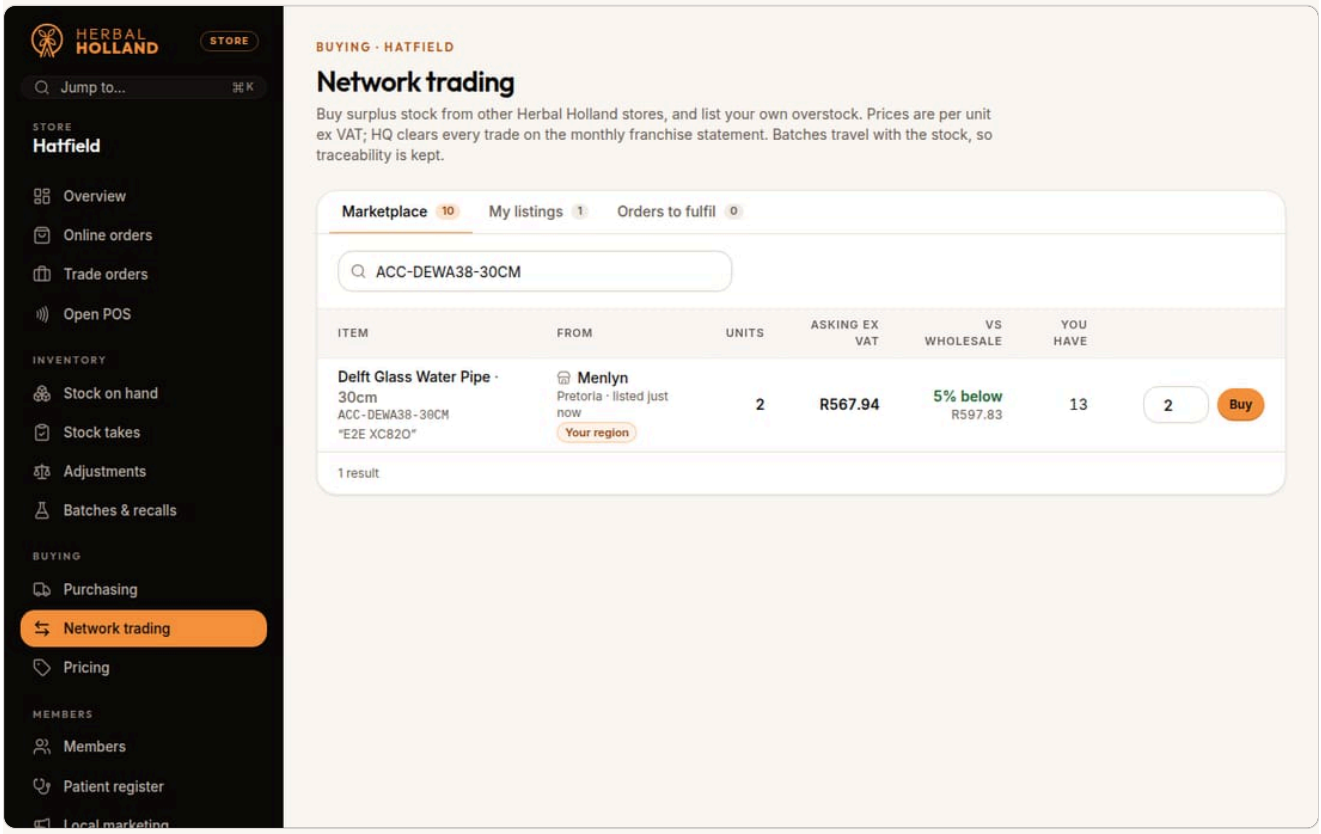

Figure 5.10 **Marketplace.** Surplus stock listed by other stores: units, asking price ex VAT against wholesale, what you already have, and Buy. Tabs for your listings and orders to fulfil.

Buy surplus stock from other Herbal Holland stores, and list your own overstock (items over target are suggested first). Prices are per unit ex VAT; HQ clears every trade on the monthly franchise statement, so no money moves between stores (what you receive is on your Supplier invoices as *On statement*); batches travel with the stock, so traceability is kept. A seller **accepts** (which commits the stock) and **ships** FEFO; declining puts the units back on the listing; the buyer receives as for a DC order. You can't buy your own listing or from a store that isn't trading.

Pricing (your shelf prices)

RRP is a recommendation: you set your own shelf prices for your tills (Competition Act s5(2)); online prices are set nationally; Rewards member prices and deals apply on top of your price. Search an item and set its price, or **Bulk change** a whole category relative to RRP (−50% to +100%) or hand it back to RRP. The page shows ranged items, items with your own price and the average margin; HQ's margin guide only warns, never blocks. Tills pick up changes on their next refresh.

5.6 Members, the patient register, local marketing and events

Members

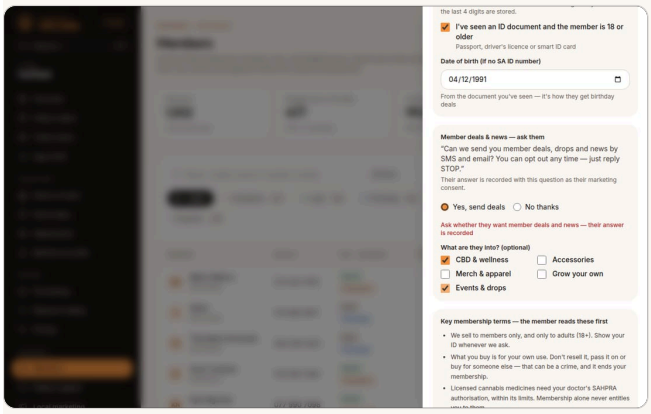

Figure 5.11 **Add a member.** The same rules as the till: ID document seen and 18+, date of birth, the scripted deals question with the answer recorded, interests, and the key terms read first.

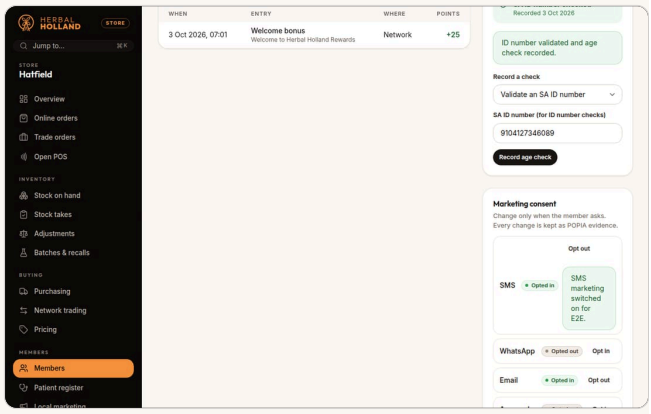

Figure 5.12 **A member.** Points ledger, the age check recorded ("ID number validated"), and marketing consent per channel, changed only when the member asks, with every change kept as POPIA evidence.

Members whose home store is yours (or who bought here): points outstanding, bought here in 30 days, average spend here; search by name, mobile, email or member number; filter by segment and marketing consent. A member's page shows their points balance, spend and visits here, purchases here, the points ledger, profile (mobile, date of birth, referral code, referred by), the **age check** with *Record a check* (ID sighted, or validate an SA ID number), **marketing consent** toggles, and their **patient authorisations**. Enrolment here follows the till's rules exactly, including the scripted consent question and the key terms.

Patient register

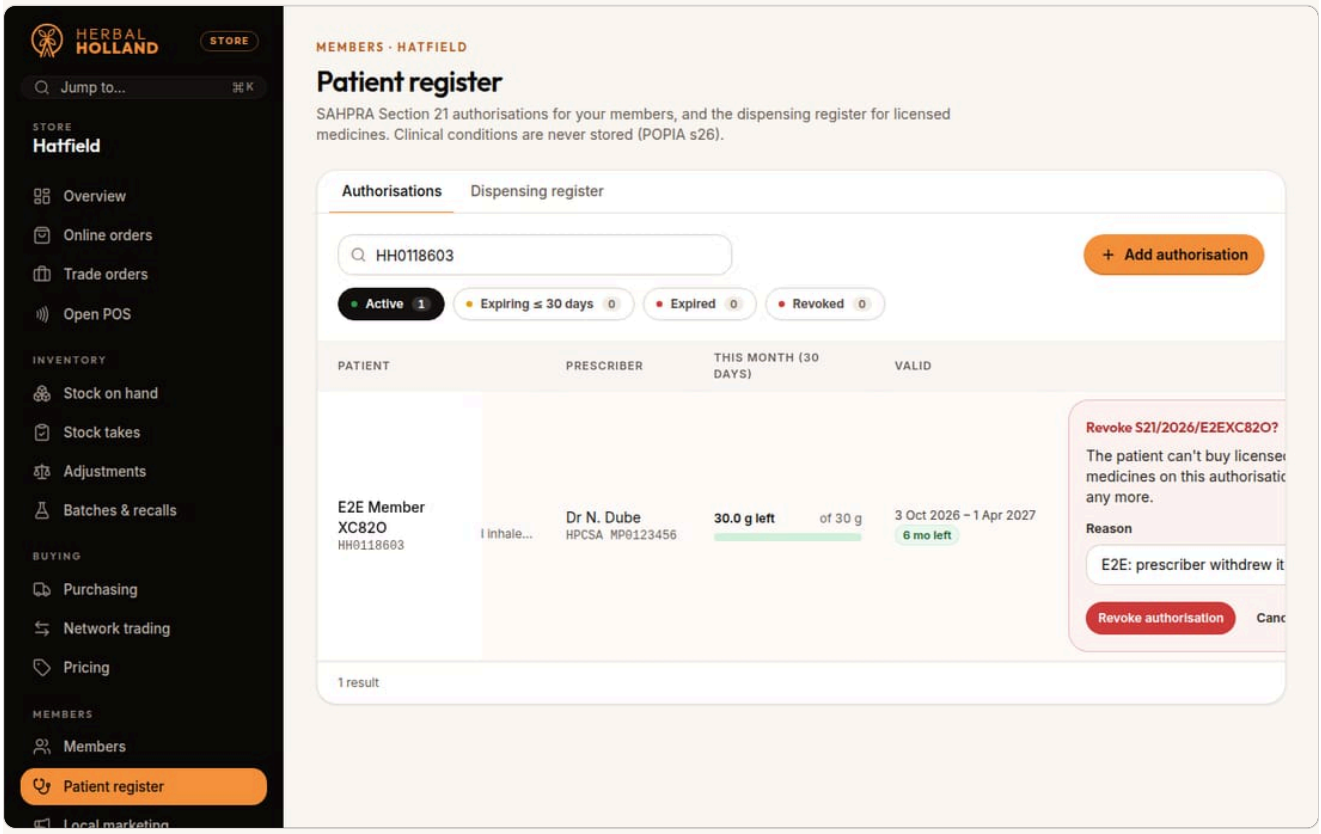

Figure 5.13 **Patient register.** Authorisations (active, expiring within 30 days, expired, revoked) with the prescriber, the quantity used this month and validity; revoking asks for a reason and takes effect at once. The Dispensing register tab is the Schedule 6 record.

1. **Add authorisation**: the member (number or mobile), the SAHPRA authorisation number, the prescriber's name and HPCSA number (MP0123456), the authorised products ("Dried flower, oils"), the **monthly limit** in grams (0–1,000), valid from and to, and the reference of the filed signed copy. Capture it exactly as on the SAHPRA letter. Clinical conditions are never stored (POPIA s26).
2. The member's card and the till read it immediately. The **quantity used this month** counts the last 30 days of licensed sales plus open online orders.
3. **Revoke** with a reason (for example the prescriber withdrew it): the patient can't buy licensed medicines on it any more.

The **Dispensing register** tab lists every licensed medicine dispensed in the period: patient, authorisation, prescriber, product, batch, quantity and the dispenser. It is printable for SAHPRA.

Local marketing (store promotions and campaigns)

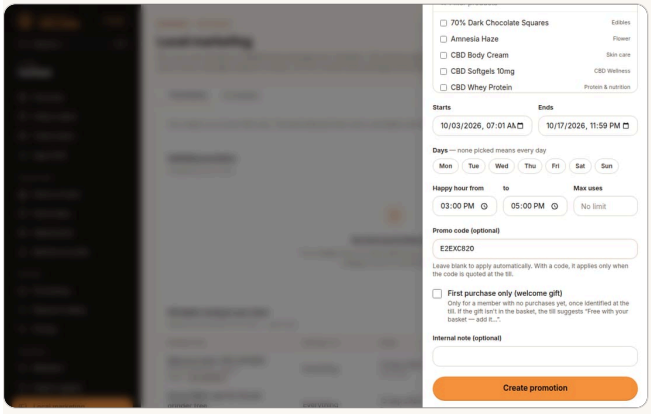

Figure 5.14 **A store promotion.** Qualifying items, dates, days of the week, a happy hour, max uses, an optional promo code, "First purchase only (welcome gift)" and an internal note; the shelf-talker preview shows how it reads.

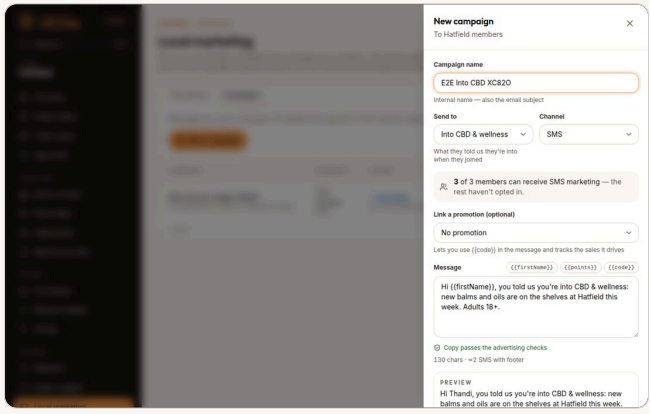

Figure 5.15 **A store campaign.** Send to an interest audience ("Into CBD & wellness") of your members on SMS; how many can receive it; an optional promotion code; the message with {{firstName}}, {{points}} and {{code}}; "Copy passes the advertising checks"; a preview with the sender footer.

Franchisees run **store-scoped promotions**: percent off, rand off (up to R5,000), multi-buys (2–20 items for a price), bonus buys (buy X get Y at a discount or free) and points multipliers. Each has dates, days, happy hours (24-hour times), a maximum number of uses and an optional code (4–16 letters or numbers, unique across the network), inside HQ's rules: never on medicines, copy screened. **HQ deals running in your store** are shown read-only.

Campaigns go to your own members only (all of them, a segment, a tier or an interest they told you about when they joined), by SMS (up to 3 parts) or email (up to 2,000 characters), optionally linking one of your promotions with a code. The audience count shows how many have consented on that channel after the do-not-contact list. Sends outside the legal window are held until the next allowed time; sent campaigns can't be cancelled.

Events

Members' evenings and opening weekends at your store: name, when, capacity, description (screened), an optional welcome gift. Changes show in the Rewards app straight away; an event with tickets can't be deleted, only changed. Each event has a **door list** (CSV) as the paper fallback for the till's ticket scanner.

5.7 Money: finance, cash-ups, banking, expenses, commission and the statement

Everything in this section also posts itself to the company's books (the general ledger, banking, VAT and month end), which owners and their accountants keep under **Money › Books** (chapter 12).

Finance

Your **profit & loss** ex VAT for the range: net sales, cost of sales (FIFO), gross profit, operating expenses, franchise fees, net profit, with the monthly trend; a **VAT201 working** (output tax on sales against input tax on stock, expenses and fees) or "Not VAT-registered"; and links to cash-ups, expenses, the statement and reports.

Cash-ups

Every till shift: opening float, cash taken, expected in drawer, counted at close, variance. **Variances over R50 are flagged red**. Tiles: shifts closed in 30 days, net cash variance, shifts with a variance, largest short. A shift's page lists takings by tender and every transaction in it.

Banking

Cash from closed cash-ups must reach the bank by the end of the **next business day** (public holidays excluded); *Cash waiting to be banked* lists the cash-ups, what each hands over (counted cash less the float that stays in the till) and by when, with overdue ones marked.

1. **Record a deposit**: tick the cash-ups it covers (up to 200), the amount on the slip, the day banked (not in the future, not more than 60 days ago), the deposit reference from the slip (up to 40 characters), a **photo or PDF of the stamped slip** (JPEG, PNG, HEIC, WebP or PDF, up to 10 MB), and a note.
2. The **owner, area manager or HQ** checks each deposit against the bank statement: **Verify** (then it is locked) or **Query** with what doesn't match. You can never check a deposit you recorded yourself.
3. A deposit R50 or more under its cash-ups raises a *Deposit short* alert; cash not banked in time raises *Cash not banked in time* (high after three days).

Slips are stored in Cloudflare R2 (EU) or on the server, served only through the app to the store's managers, owner and HQ, and every view is audited.

Expenses

Capture running costs from supplier invoices: date, category (rent, salaries, utilities, security, marketing, supplies, bank fees, other), description, supplier, amount incl. VAT, and whether VAT is claimable (only if your company is VAT-registered and the supplier's invoice shows VAT). They feed the P&L and the VAT201 input tax; the page shows spend by category.

Supplier invoices

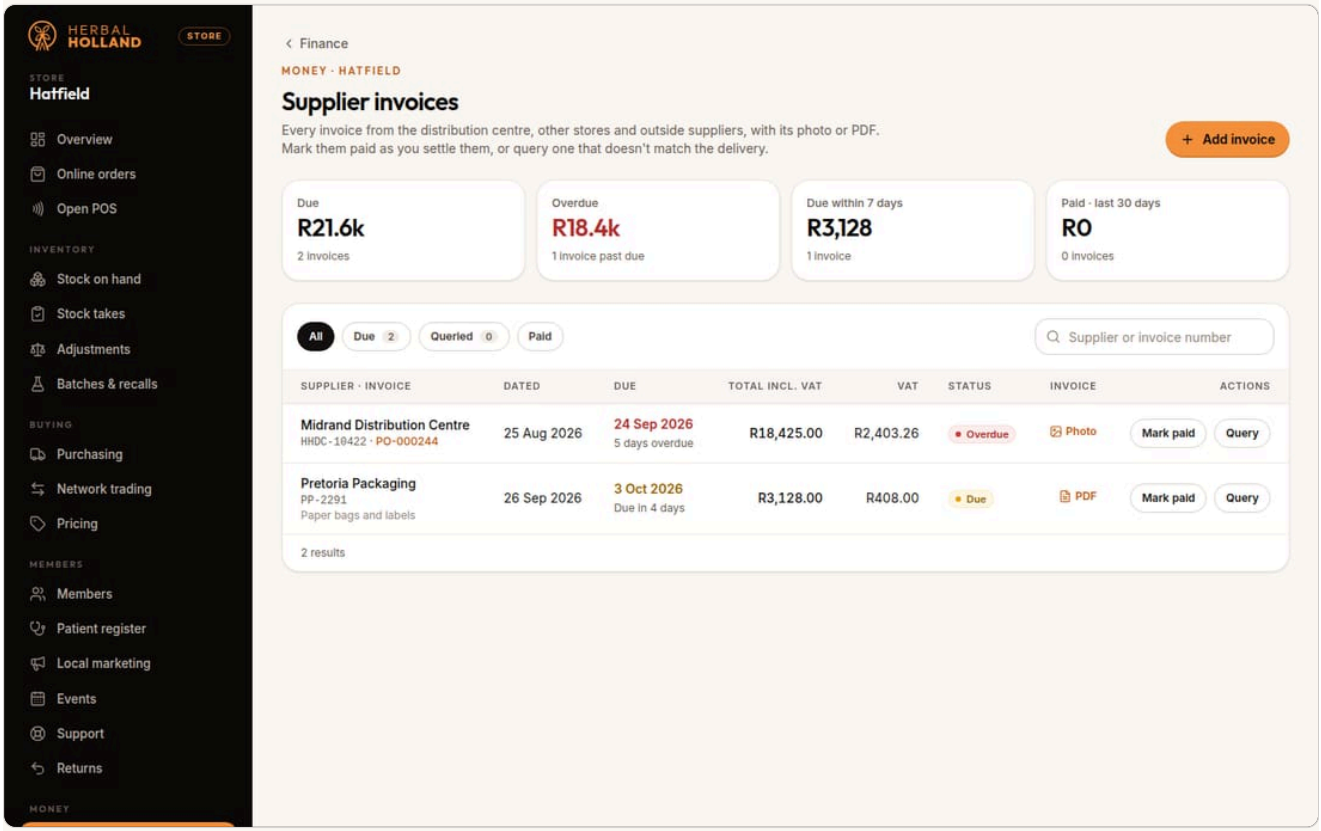

Figure 5.16 **Supplier invoices.** Due (with how much of it is on the statement), Overdue, Due within 7 days and Paid in the last 30 days; each invoice with its supplier and number, the stock order it belongs to, dates, total and VAT, status, the photo or PDF (or the stock order, for stock from the DC or another store), and Mark paid or Query.

What the store owes its suppliers. A stock order (from the **distribution centre** or **another store**) is put on automatically when you receive it, for what you counted in: the stock order is its tax invoice (the **Stock order** link), it shows as *On statement*, due on the month's last day, and is settled on that month's franchise statement. There's nothing to capture, pay or query, and once the month is over it shows as *Settled*. Invoices from outside suppliers come with a photo or PDF: capture them under Finance › **Supplier invoices › Add invoice**: supplier, invoice number, invoice date and due date, total incl. VAT, **Charged to** (the account in the books: rent, utilities, supplies and so on), whether it is a tax invoice with 15% VAT (it counts towards your input tax only if your company is VAT-registered), the file (JPEG, PNG or PDF up to 8 MB; the bytes are checked, not the name) and a note. The same invoice can't be captured twice. **Mark paid** (with the date and a note) as you settle them; **Query** one that doesn't match the delivery, saying what's wrong, and **Reopen** it ("It's due again") once that is settled. Invoices due within seven days and overdue ones appear on the Today list (stock orders never do, because the statement settles them); HQ › Finance sees what every store owes and what is overdue. Every step is audited, and the files are served only through the app.

Commission

What each person earned on their **own till sales** at HQ's rates (2% of net sales ex VAT by default, by product class; **0% on licensed medicines and CBD supplements by law**), after refunds, never below zero for a month. The **owner** switches it on (it is remuneration, so agree it with staff in writing), approves each month for payroll once the month has ended, downloads the CSV, and can release a person held by an open loss-prevention alert. Staff see their own figure on the till.

Franchise statement

One statement per month between your store and HQ, netted to a single amount. **Credits**: online sales HQ collected for you, points redeemed in store (reimbursed from the pool), My Deals given (funded by the marketing fund), stock sold to network stores. **Debits**: royalty and marketing levy on net sales, e-commerce commission on online sales you fulfilled, VAT on fees, points issued (funding the pool), wholesale stock on account, stock bought from network stores. Positive: HQ pays you; negative: you pay HQ. HQ emails them monthly (chapter 6).

5.8 Insight: reports and loss prevention

Reports is the reports centre for your store (and all your stores, for an owner): live, filterable, charted and downloadable as CSV, in seven groups: Sales, Inventory, Purchasing, Finance, Members, Marketing, Compliance. The full list, with what each answers, is in chapter 6, including the two member reports, **Member cohorts** and **Retention & order value**. The same definitions serve HQ, scoped to your store. Every CSV export is audited; HQ can also schedule a report to arrive by email (chapter 6).

Loss prevention lists the alerts raised about your store (cash-ups short, deposits short or late, suspicious refunds, unusual write-offs, sales on own member cards, offline selling, out-of-hours sales, compliance exceptions) with their evidence. Mark one **Investigating**, **Resolve** it with a note, **Dismiss** it as a false alarm, or **Reopen** it; every step is in the audit log. An alert is never shown to the person it is about, and the rules and thresholds are HQ's (chapter 11 lists them).

5.9 Store: team and PINs, HQ updates, the menu board, settings

Team

Everyone who works the tills. Add a person with their full name, role (member advisor or manager; only the owner can add managers), a **4-digit till PIN** (no repeated or running digits; share it in person), optionally a work email and a back-office password (managers only: a temporary one of at least 10 characters, without their name or email; they choose their own at first sign-in, within 72 hours), and whether they are an **Authorised dispenser**, who may complete sales of licensed medicines. Only the owner can tick it, and only for your responsible pharmacist or trained, authorised staff. You can set a new PIN, link or unlink the person's own **Rewards member card** (so the loss-prevention rules can see sales rung up on their own card; ask the owner to change your own), and deactivate them. **Reset PIN** (or **Set PIN**) is a small form in the row: type the four digits and save, and the row confirms "New PIN set for Anika Daniels. Share it in person, never by message." The PIN box never shows what was typed, and a new PIN also switches a locked PIN back on. **Reset password** (for someone with a back-office login) signs them out of the back office and shows a temporary password once. Owners are listed separately.

HQ updates

News, launches, policy changes and recalls from HQ. Some must be **acknowledged by a manager**, and they stay on the dashboard until they are.

Settings

Store details shown on the website, store finder, receipts and order messages: phone, email, WhatsApp (service messages only), and the services: **Click & collect** (turn off during stock takes or renovations) and **Same-day delivery** (this store may be picked for same-day orders within 30 km). Changes reach the website and store finder straight away. The **Notifications** card ("Push notifications to your phone for the stores you look after") has one switch, **Notify me on this phone**: managers, owners and area managers switch it on per phone or browser (on iPhone the back office must be on the Home Screen first; a blocked site, or a browser that can't show notifications, says so) and hear about new online orders as they come in (checked every 5 minutes), loss-prevention alerts about other people, HQ updates that need acknowledging, lots about to expire, cash due at the bank and a daily low-stock digest; a tap opens the page in question. The scheduler sends them (chapter 11) and never twice for the same event; without push keys on the server the switch says "Push notifications aren't set up on this server yet (WEB_PUSH keys). Ask HQ." **Licences & VAT**, the company, format, region, DC and franchise fees are held by HQ; contact HQ to change them.

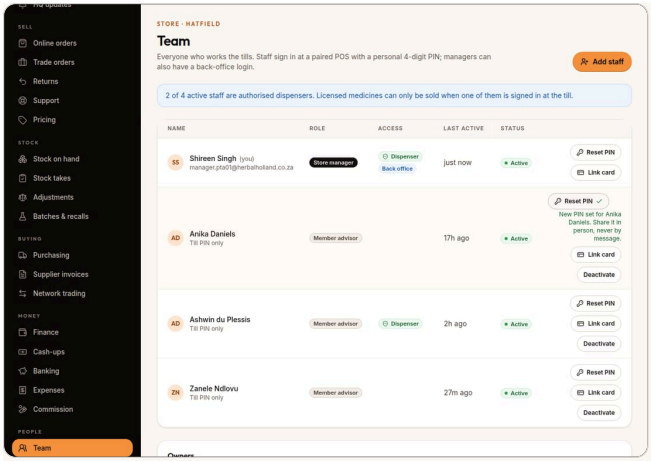

Figure 5.17 Team. Reset PIN opens a small form in the row; the confirmation reads "New PIN set for Anika Daniels. Share it in person, never by message."

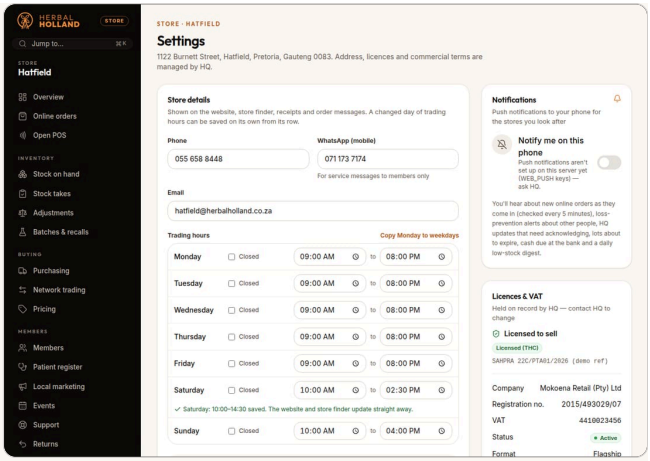

Figure 5.18 Settings. Store details with the trading hours ("Saturday: 10:00–14:30 saved. The website and store finder update straight away.") and the Notifications card with "Notify me on this phone".

5.10 Working faster: lists, saved views, keyboard shortcuts and editing in place

The back office and the HQ console share one set of list conventions, so a manager who knows Stock on hand can read HQ's catalogue without learning anything new.

- **Tables.** The header row stays visible while you scroll; on a wide list the first column is pinned while the rest scrolls sideways, so a phone still shows the item's name; column headings sort the list, and the URL carries the sort, so a sorted, filtered list can be bookmarked or shared; a click anywhere on a row opens it; rows are dense by default and roomier where a row holds buttons; every empty list says what would fill it.
- **Saved views.** On the lists with filters (online orders, stock on hand, members, the HQ catalogue, stores, the audit log and messages), set the filters, sort and search you want and press **Save this view**; name it, and it appears as a chip above the list, a link back to the same filters (× removes it). Views are kept per person and page in the browser on that device: nothing to administer, nothing on the server.
- **Keyboard shortcuts** (they pause while you type in a field): `⌘K` / `Ctrl+K`, or the **Jump to...** box under the logo, opens the command palette: every section of the sidebar plus your recent pages; type to filter, `↑` `↓` `Enter`. `/` focuses the search box on the page (or opens the palette on a page without one). `g` then `o` goes to Online orders, `g` `i` to Stock on hand (in HQ, the catalogue), `g` `r` to Reports, `g` `h` to the overview, `g` `m` to Members, with the second key within 0.9 seconds. `?` shows the cheat sheet; `Esc` closes a dialog, drawer or inline edit. Recent pages are remembered per person in the browser.
- **Editing in place.** On Stock on hand, click a shelf price or the reorder · par cell to change it there (Enter saves, Esc cancels; an empty shelf price follows the list price). On the HQ catalogue, click an RRP (or the price range of a product with several variants) to change it. Under Settings a changed day of trading hours gets its own Save; under Team, Reset PIN is a small inline form. The cell shows what you typed while it saves and a tick with the confirmation after; an error keeps the form open with the message. Every inline save goes through the same server action, checks and audit entry as the full form.

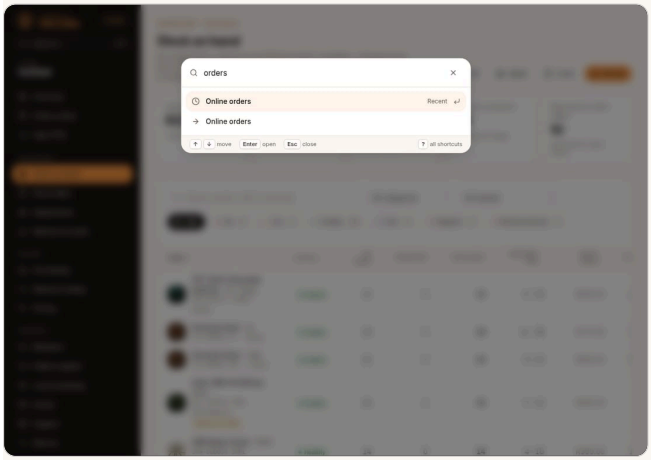

Figure 5.19 The command palette. "orders" finds Online orders: the recent page first, then the section; ↑ ↓ move, Enter opens, Esc closes.

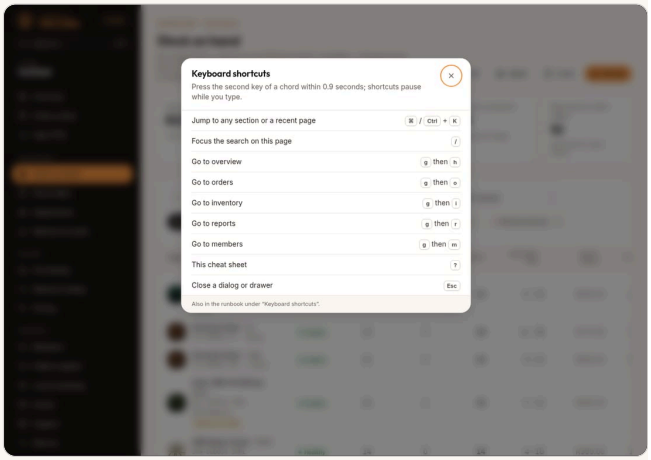

Figure 5.20 Keyboard shortcuts (press ?): jump to any section or a recent page, focus the search, g then h / o / i / r / m, Esc.

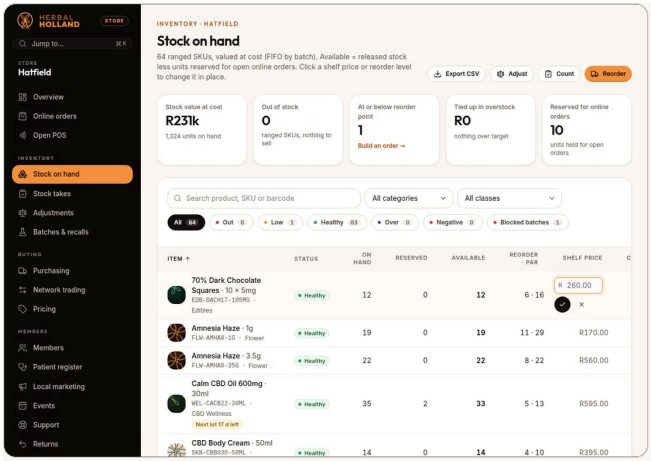

Figure 5.21 **A shelf price edited in place** on Stock on hand: the cell becomes a small form with a tick to save and × to cancel.

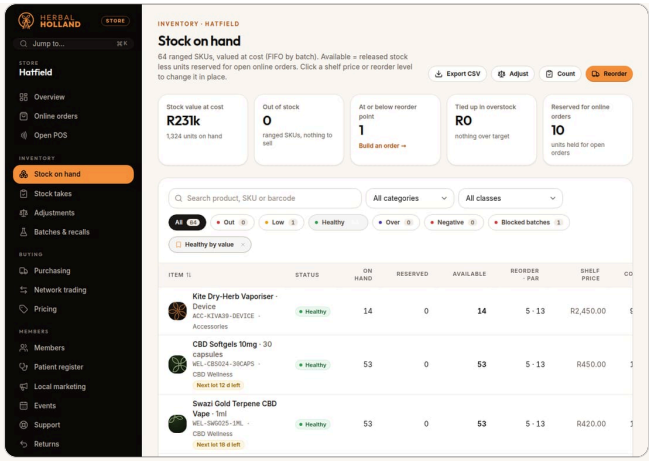

Figure 5.22 **A saved view.** "Healthy by value" (the Healthy filter sorted by value), kept as a chip above the list on this device.

ACCESSIBILITY

On every back-office and HQ screen, every control is reachable and usable from the keyboard, every input is labelled, dialogs and drawers keep focus and close on Escape, sort order and saving are announced to screen readers, and colour is never the only signal. Reviewers can audit any page with Lighthouse or axe.

6

CHAPTER 6

The HQ console

The network from one screen: **stores, catalogue, pricing, orders, members, campaigns and messages, Rewards, money, reports and governance**. Area managers see the same console limited to their region.

IN THIS CHAPTER

6.1 Network overview

6.2 Stores, regions and companies

6.3 Franchise leads

6.4 Catalogue: products, variants, ranging, categories and import

6.5 Batches and recalls

6.6 Pricing: price lists, tier prices and the rules

6.7 Promotions

6.8 Distribution and online orders

6.9 Support and returns across the network

6.10 Members and CRM

6.11 Campaigns, the do-not-contact list and social posting

6.12 Messages: every SMS, email and push the platform sent

6.13 Rewards settings and My Deals

6.14 The launch programme: Founding Members, drops and events

6.15 Money: finance, statements and commission

6.16 Reports and exports

6.17 Governance: loss prevention, compliance, audit log, announcements and team

6.1 Network overview

The overview leads with today: **Network sales today** against the same day last week, **Net sales · month to date** against the same days of last month, **Stores trading today** ("1 of 24 · 23 with no sale yet →"), **Online orders open** (new · ready), **Loss-prevention alerts** (high severity first) and, for the HQ team, **New franchise leads** ("first reply within a day") and **Statements to email** for last month. Then the range: net sales (ex VAT), transactions, average basket, online share and active members; **Network net sales** by day; **Sales by region** (open a region for its stores); the **Store league** ranked by net sales; **Needs attention** (store orders awaiting DC approval, batches recalled or in quarantine, SKU-store lines at or below reorder point, negative stock lots, and the Rewards liability); and **Busiest hours** by weekday and hour. Everything reads the daily rollups, so it is as fast at a thousand stores as at twenty.

An **area manager** gets the same console for their region only: the region's figures today, then **Your stores, ranked** (net sales, growth, average transaction and an *Exceptions* column: cash-ups past their banking deadline, high and other alerts, negative stock lots, "No sales yet today" after 11:00, low stock), and an **Exceptions** card with the most urgent stores first. Every store opens its back office.

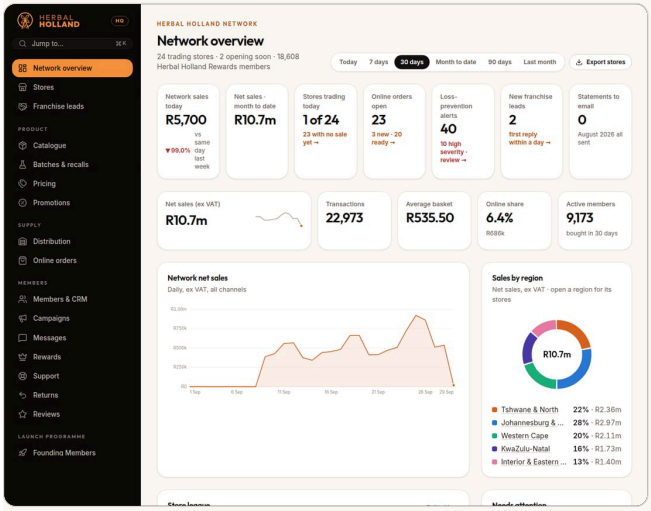

Figure 6.1 **Network overview** for an HQ administrator: today's seven tiles, the range figures, network net sales by day and sales by region.

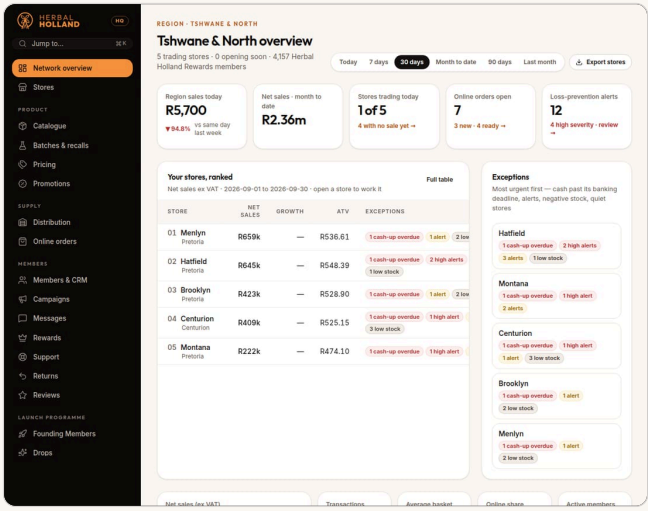

Figure 6.2 **Tshwane & North** for its area manager: the region today, "Your stores, ranked" with their exceptions, and the Exceptions card.

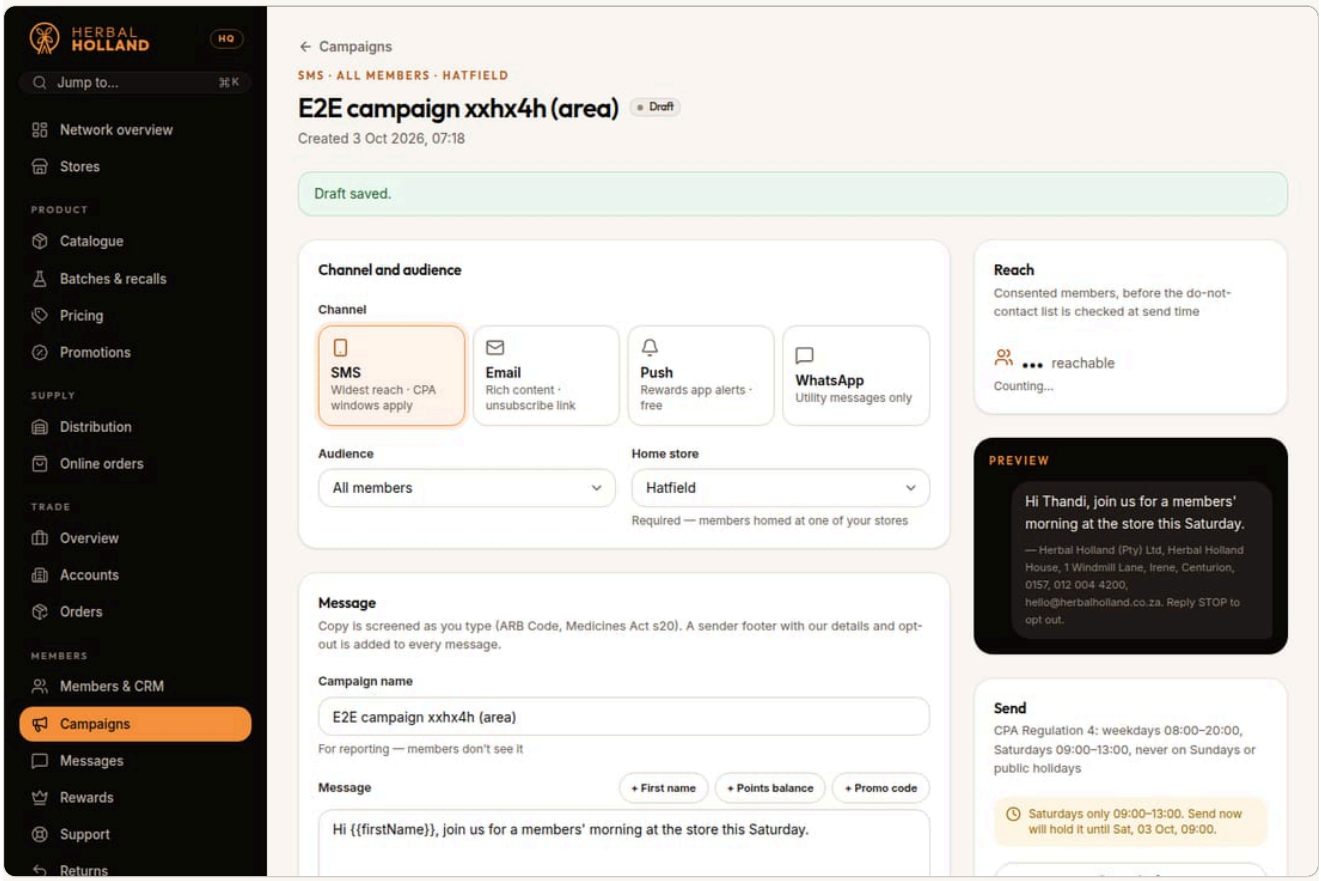

Figure 6.3 **An area manager** drafting a campaign for one of their stores: the console is the same, scoped to their region, and campaigns they prepare are drafts for the HQ marketing team to send.

6.2 Stores, regions and companies

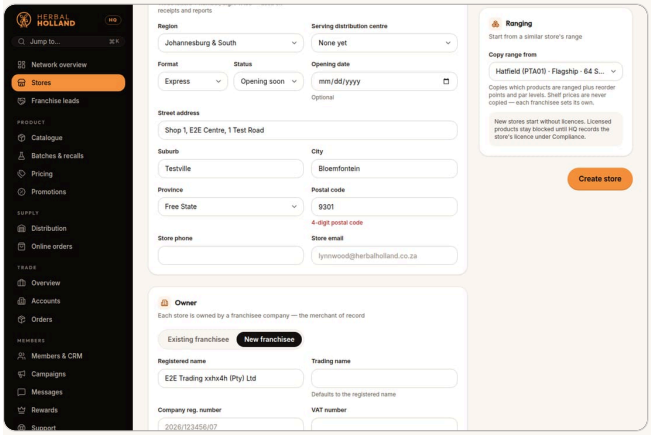

Figure 6.4 Onboard a store. Region, serving DC, format, status (opening soon), opening date, address, then the owner (an existing franchisee or a new company) and a starting range copied from a similar store.

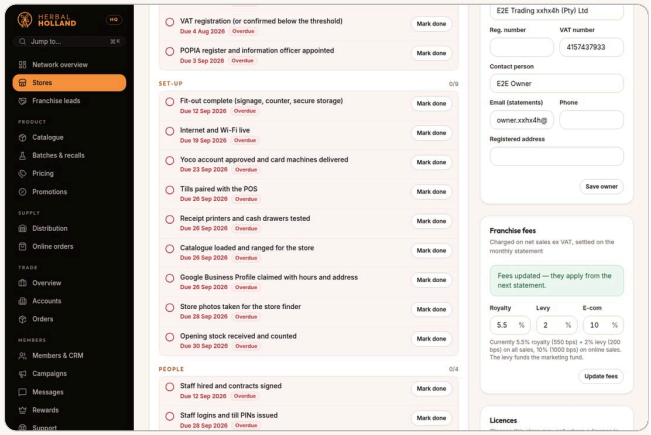

Figure 6.5 A store. Profile and services; the owner company (registered name, reg. and VAT numbers, statement email); franchise fees (royalty, levy, e-commerce commission) that apply from the next statement; licences.

The stores list shows every store with its owner, trading over 30 days, transactions, average per trading store and membership; filter by region, format (Flagship, Standard, Express) and status (trading, opening soon, closed); search by store, code, city or owner.

1. **Onboard a store**: name and a code (three letters and a number, for example `PTA06`, unique), region, serving distribution centre, format, status (*Opening soon* until the morning it opens; members can already choose it as their home store), optional opening date, street address, suburb, city, province, postal code (coordinates must be inside South Africa), phone, WhatsApp (utility messages only), email, receipt footer.
2. **Owner**: pick the franchisee company or create one: registered name, trading name, company registration number, VAT number (10 digits starting with 4; blank means plain invoices with no VAT), contact person, statement email, registered address. The company is the merchant of record for the store's sales.
3. **Ranging**: start from a similar store's range (products, reorder points and par levels; shelf prices are never copied, because each franchisee sets its own).
4. On the store's page later: services (click & collect, same-day delivery), the **franchise fees** as percentages of net sales ex VAT, settled on the monthly statement, and the **licences**: the classes this store may sell where a licence is required, with the licence or permit number that prints on receipts and invoices. New stores start without licences. **Franchisee owners** (HQ administrators): the company's owner logins. Add an owner (a temporary password is shown once), reset a password, or switch an owner off (their sessions end; the last active owner of a trading company can't be switched off).

Regions are the areas an area manager looks after; distribution centres are stores of kind *warehouse*. Staff logins and tills are added from the store's own back office.

The opening checklist

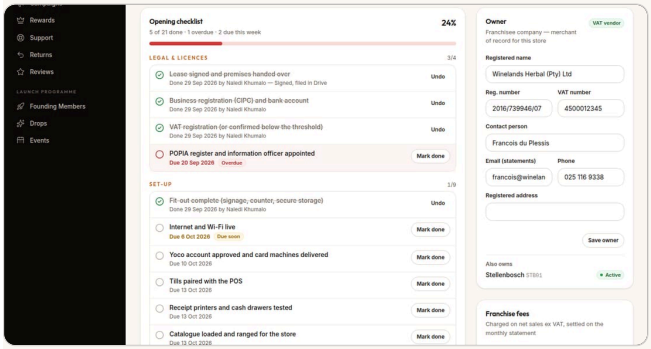

Figure 6.6 Opening checklist on a store's page: "5 of 21 done · 1 overdue · 2 due this week", the progress bar, and the tasks grouped under Legal & licences, Set-up, People and Launch with their due dates (overdue in red), Mark done (with a note) and Undo.

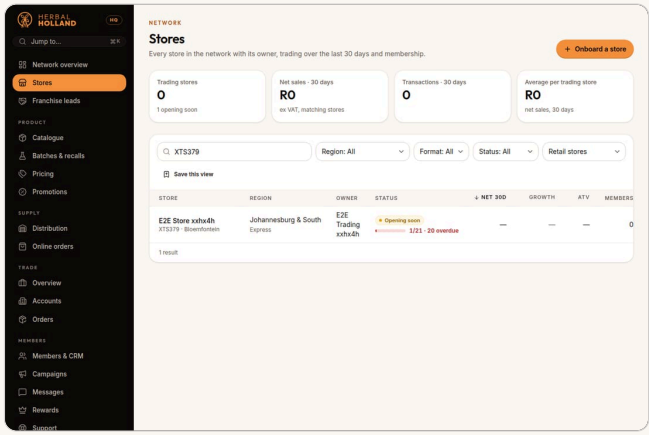

Figure 6.7 The stores list shows each opening store's progress under its status: "1/21 · 20 overdue".

Onboarding a store seeds its **opening checklist** from the platform's template: *Legal & licences* (lease, CIPC registration and bank account, VAT registration, the SAHPRA or pharmacy licence where the store will sell licensed products, the POPIA register and information officer), *Set-up* (fit-out, internet, the Yoco account and machines, tills paired, printers and drawers tested, catalogue ranged, Google Business Profile, store photos, opening stock received and counted), *People* (staff hired, logins and PINs, the authorised dispenser, training) and *Launch* (opening date confirmed, press and listings, herbalholland.com facts, a soft opening). That is 21 tasks, or 22 with the licence line. Due dates count back from the opening day and move with it while the store is still *Opening soon*. The HQ team ticks tasks off with a note ("Signed, filed in Drive"); area managers see them; a store that predates the checklist gets one from **Start the opening checklist**. Every tick is audited. Chapter 11 has the same list as a procedure.

6.3 Franchise leads

Franchise enquiries the website's former enquiry form sent land here (herbalholland.com no longer takes them), numbered `FL-…`, and are visible to HQ administrators and the HQ team only. The list shows new leads waiting for a reply, open leads, disclosures sent and enquiries in the last 30 days; search by number, name, email or area; filter by status.

A lead's page shows the enquiry as sent (area, province, capital band, experience, pharmacist partner, message), **Move it on** through the statuses (New › Contacted › Information evening › Disclosure sent › Signed, or Not a fit) with notes for the team, who in HQ is following it up, the **disclosure document** date, and the history from the audit log.

> **RULE (CPA FRANCHISE REGULATIONS)**
> A lead can't be marked **Signed** sooner than **14 days** after the day the disclosure document was sent; record that day first. Leads that are not a fit are deleted a year after their last change by the nightly job; an HQ administrator can delete a lead on request (type DELETE to confirm). The franchise page and this pipeline never state earnings or investment figures.

6.4 Catalogue: products, variants, ranging, categories and import

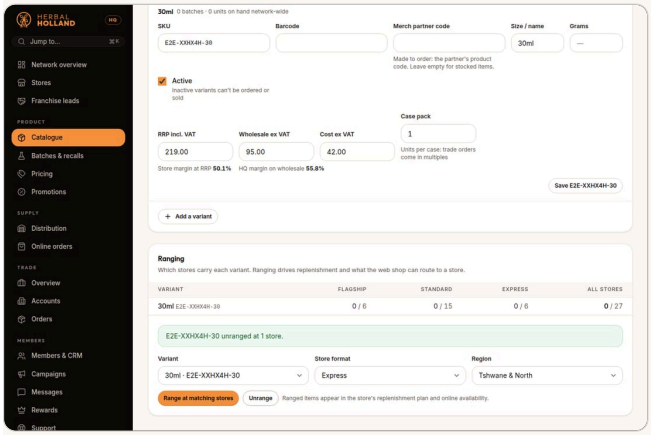

Figure 6.8 A product. Variants (SKU, barcode, merch partner code for made-to-order items, size, grams, active, RRP incl. VAT, wholesale and cost ex VAT with the margins), then **Ranging**: which stores carry each variant, by format and region.

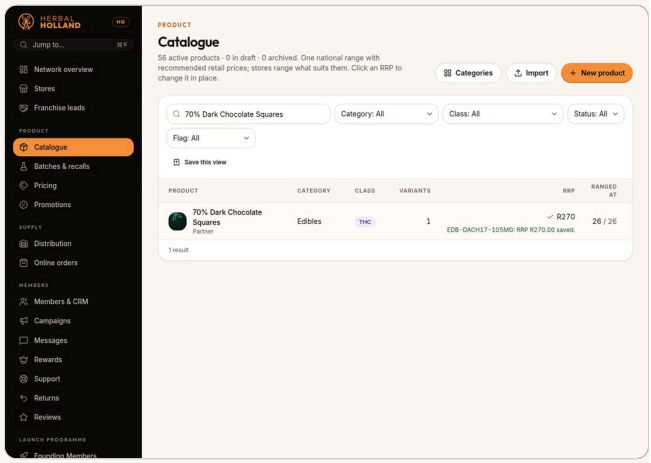

Figure 6.9 An RRP edited in place. The tick and "RRP R270.00 saved" under the price; the row shows the product, category, class, variants and where it is ranged.

The catalogue lists every product with search by name, SKU or barcode and filters by category and status (draft, active, archived). A product holds the story (name, tagline, description, brand, line), the **regulatory class** and its compliance data (legal basis, CBD per pack and per day, THC cap, approved claims, net content, ingredients, allergens, "naturally occurring" for CBD food), strain and terpenes for plants, moods and flavours, origin and heritage, featured, tobacco-related, and its **variants**. The form checks the class's rules live and again on save ("This product doesn't meet Schedule 0 CBD rules. Fix it before saving."); a change to compliance data is audited separately. New products start in **draft**: add the story, compliance data and variants, then publish and range.

An RRP can be changed without opening the product: click it in the list (or the price range of a product with several variants) and change it in place ("EDB-DACH17-105MG: RRP R270.00 saved."), with the same checks and audit entry as the product form.

- **Ranging** decides which stores carry a variant. It drives replenishment suggestions and what the web shop can route to a store. Range or unrange by store format and region; a variant must be active to be ranged.
- **Categories**: name, a line of copy (screened) and an icon, in the order they appear in the shop, on the tills and on the menu boards. A category with products can't be deleted; move them first. A category shows to members once it has an active product.
- **Made-to-order merch**: a variant with a merch partner code has no stock anywhere; it costs what the partner charges and always ships by courier from the partner (chapter 9).

Import from a spreadsheet

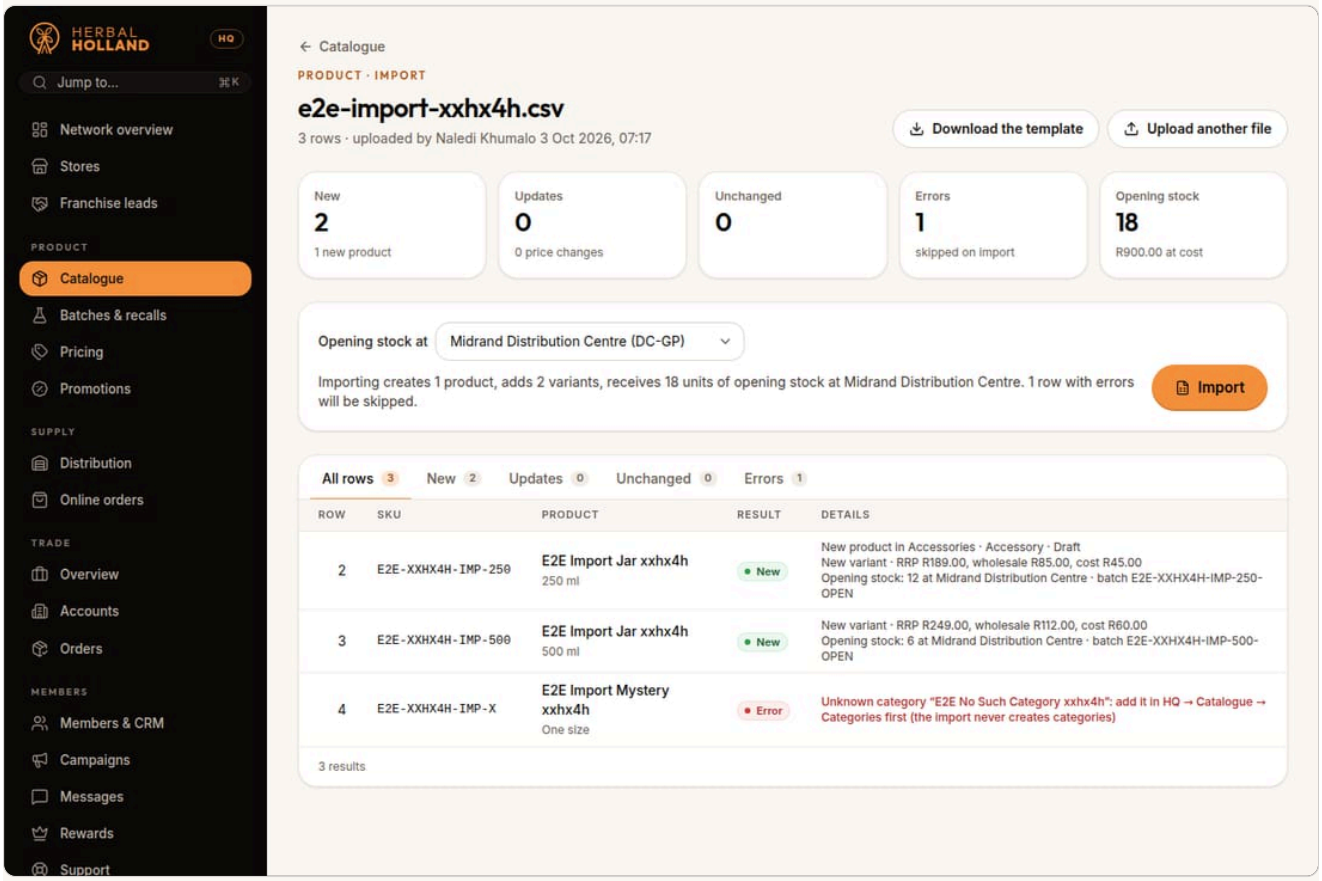

Figure 6.10 Import preview. A dry run: new products, price updates, unchanged, errors (with the reason; here, an unknown category), and the opening stock that would be received at the chosen location. Nothing changes until you press Import.

1. **Download the template** (CSV; the columns are in appendix B) and fill one row per variant; rows with the same product name are one product.
2. **Upload** it. Checking changes nothing: the preview shows what each row would do (create, update by SKU, or an error) and runs every product through its class's rules and the copy screening.
3. If the sheet has stock, batch and expiry columns, choose the location (a distribution centre) that receives the **opening stock** at HQ cost.
4. Press **Import**. Rows with errors are skipped; the import never creates a category; the file is audited once with its counts.

6.5 Batches and recalls

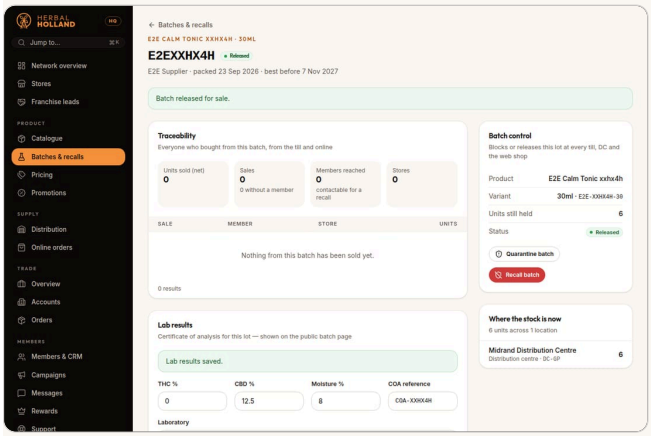

Figure 6.11 A released batch. Traceability (units sold, members reached, stores), the lab results shown on the public batch page (THC, CBD, moisture, COA reference, laboratory, terpenes), batch control, and where the stock is now.

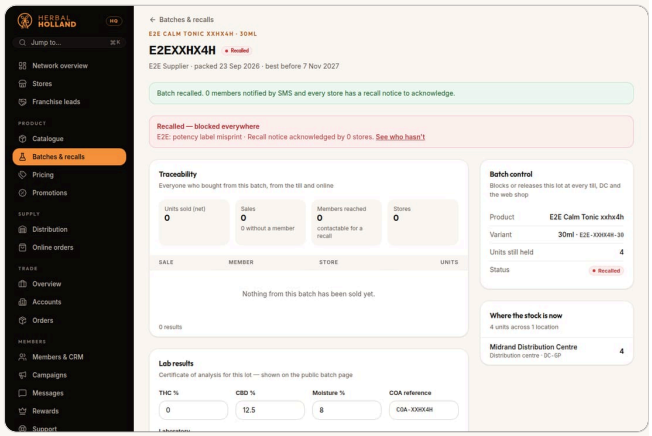

Figure 6.12 Recalled: blocked everywhere. The reason (shown to stores and members), members notified by SMS, and which stores have acknowledged the recall notice.

Every lot in the network with its status (released, quarantine, recalled), expiry and supplier; tiles for released, in quarantine, recalled and expiring in 60 days. A batch's page holds its **lab results** (the certificate of analysis shown on `/batch/<code>`), **traceability** (everyone who bought from it, from the till and online, and how many can be contacted) and **batch control**:

Action	Effect
Quarantine	Blocked from sale and shipping at every till, DC and the web shop until released; a reason is required (e.g. awaiting a microbial re-test). Only a released batch can be quarantined.

Action	Effect
Release	Back on sale (only from quarantine; a recalled batch can never be released).
Recall	Blocked everywhere at once; an announcement that every store must acknowledge; the members who bought it are listed and notified by SMS; the reason is shown to stores and members and kept on the audit trail. Stores return or destroy what they hold (chapter 5). The recalls report is the record for SAHPRA.

6.6 Pricing: price lists, tier prices and the rules

Prices resolve in a fixed order, the same at every till and online: the store's own shelf price (tills only) › else the best matching zone or channel price list › else RRP; then the member's tier percentage or a **member price list** (whichever is lower), quantity breaks, and near-expiry markdowns at the till. Medicines skip everything after the shelf price.

- **Price lists** are of three kinds: *Zone* (for stores or regions, e.g. tourist pricing), *Channel* (POS or online) and *Member* (for one or more tiers; the "Rewards deal" prices). Each has a priority, dates, a blanket adjustment against RRP (−90% to +100%) and/or per-item prices with minimum quantities (quantity breaks). They layer on the national RRP; a franchisee's shelf price still wins in their store. Tills and the shop use a saved list on the next quote.
- **What would this member pay?** The page has a what-if: channel, customer, quantity, date and time › the price and the rule that decided it.
- **Pricing rules** (network guardrails): the near-expiry window in days (21) and markdown percentage (20%, where 0 switches it off; never on licensed medicines), and the store margin guide (25%, warning only).

6.7 Promotions

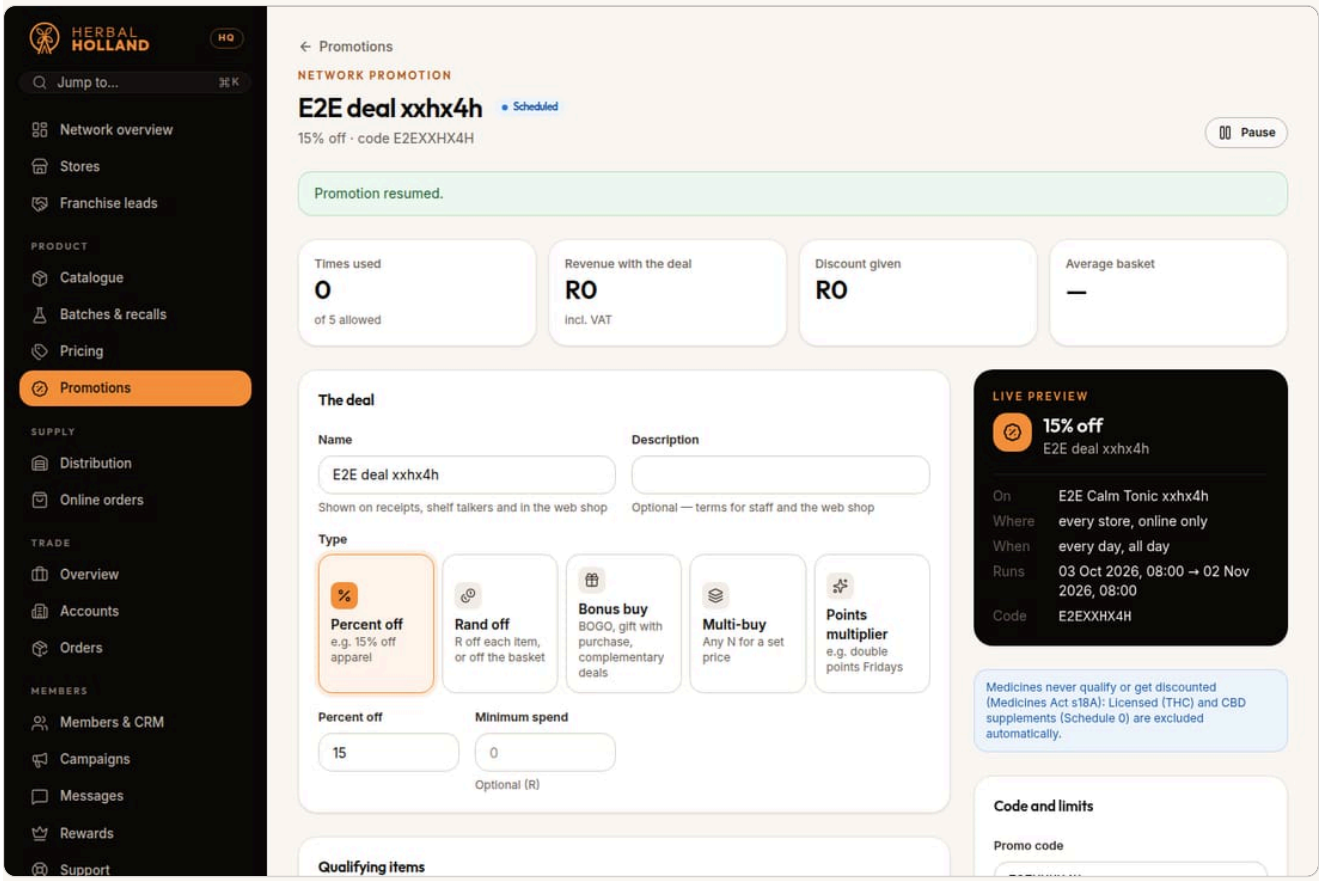

Figure 6.13 **A network promotion.** Times used, revenue with the deal, discount given; the deal type (percent off, rand off, bonus buy, multi-buy, points multiplier), qualifying items, code and limits, and the live preview. "Medicines never qualify or get discounted."

Network deals and store-run offers in one list (run by HQ or by a store), live and ended. A promotion has a name that shows on receipts and shelf talkers, a type, qualifying items or categories (and reward items for bonus buys), a minimum spend, channels (POS, online), dates, days of the week and a happy hour, a maximum number of uses, an optional code, and "first purchase only" for a welcome gift. The types are **Percent off**, **Rand off** (an item or the basket), **Bonus buy** (buy X or spend Y, get Z at a discount or free; BOGO, gifts with purchase, complementary deals), **Multi-buy** (any N for a set price) and **Points multiplier** (double-points Fridays). Deals apply automatically; close-but-not-quite baskets get a nudge. Pause stops a deal at once; a promotion's page shows its performance.

6.8 Distribution and online orders

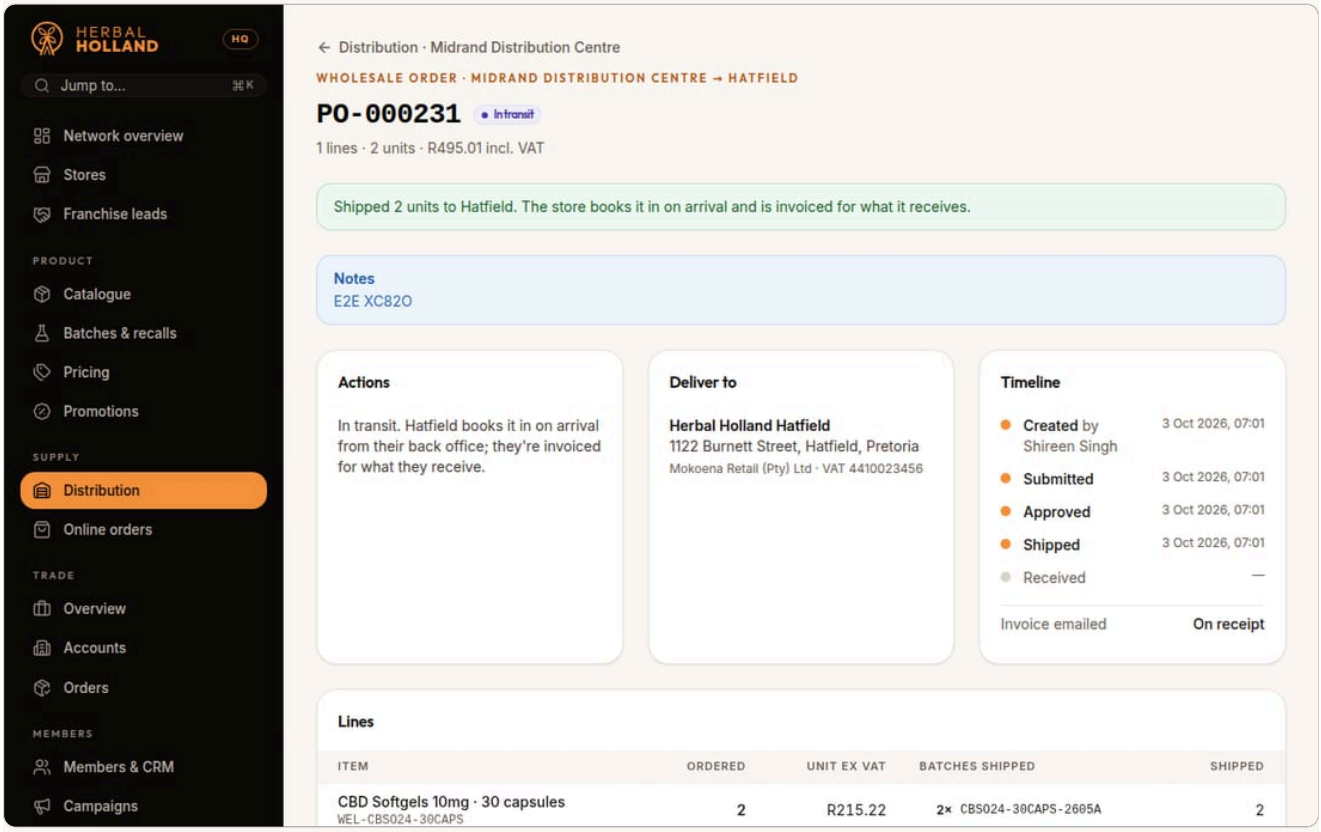

Figure 6.14 **Distribution.** A wholesale order from the Midrand DC to Hatfield: shipped, in transit, with the batches picked; the store books it in on arrival and is invoiced for what it receives.

Distribution is the DC's desk: store orders awaiting approval, to pick and ship, in transit and shipped in 30 days; a low-stock list of SKUs at the DC. An order's page: approve, **reject** or cancel with a reason for the store, pick first-expiry-first-out from the batches shown (only released stock), and **Ship**; the tax invoice is emailed when the store receives, and settled on its statement.

Online orders is the whole network's web shop: open orders, awaiting payment, online sales and orders in 30 days; search by order code or member number; filter by status and fulfilment. An order's page shows the timeline, member, fulfilling location, courier and tracking, payment (method, status, reference, tax invoice, points earned) and **Cancel order** with a reason (the member is told; stock released, points returned, online payments refunded first). The same page holds the **Delivery & collection settings**: same-day fee, courier fee, free delivery over, merch courier, merch notice (shown with made-to-order merch, for example the partner's festive closure), same-day cut-off hour, unpaid order hold in minutes (minimum 15), collection hold in days (minimum 1). Checkout uses them immediately.

6.9 Support and returns across the network

Support and **Returns** give HQ the whole network's support tickets and return requests, with the same actions a store has (reply, assign, prioritise and resolve; approve or decline, book the collection, receive and refund), so HQ can step in on any store's queue and keep the service levels. Tickets keep only the name, contact details and what was written; the audit log records numbers and categories, never the message.

6.10 Members and CRM

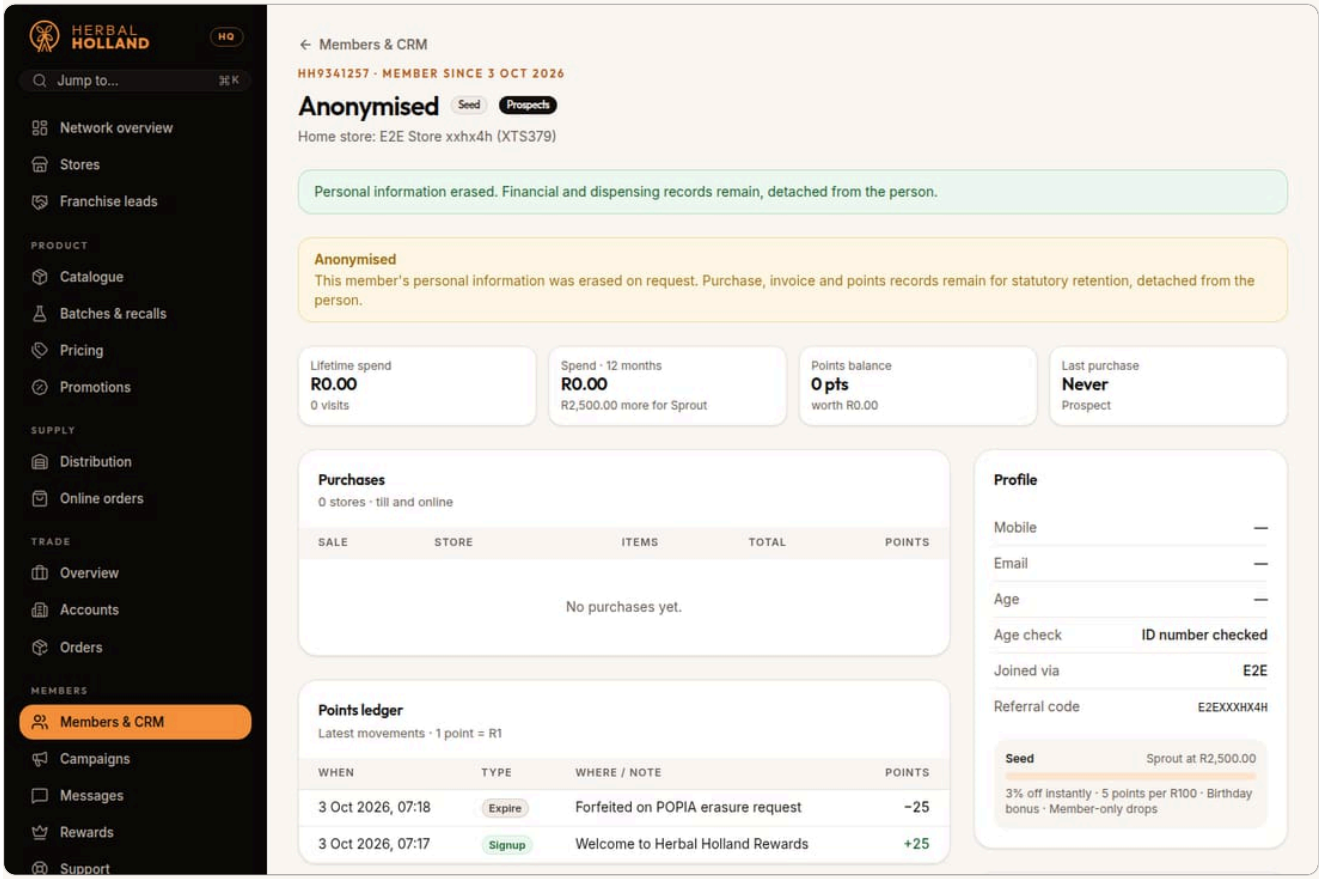

Figure 6.15 **Right to erasure.** An anonymised member: personal information erased, financial and dispensing records kept for statutory retention, detached from the person, points forfeited.

Every Rewards member across the network (an area manager: members homed at their region's stores): members, active in 30 days, new this month, reachable by SMS; **Segments** (recency × frequency, each with a suggested play, sent to a campaign in one click) and **Consent reach** per channel. Search finds a member by name in either order ("Abrahams, Mpho"), part of a mobile number, or a member number with or without the HH; when nothing matches exactly the closest names are shown, marked "Showing close matches". Stock and catalogue searches do the same for product names ("durbn" finds Durban Poison).

Segment	Who	Suggested play
Champions	Bought in the last 30 days, 10+ visits	Reward & recruit: referral asks, members' evening invitations
Loyal	Bought in the last 60 days, 5+ visits	Tier-up nudges, new-drop previews
Promising	Recent, 2–4 visits	Education + second-category cross-sell
New	First purchase in the last 30 days	Welcome journey: how points work, how to read a lab result
At risk	3+ visits but quiet for 60–120 days	Win-back: double points weekend
Lapsed	No purchase for 120+ days	Reactivation offer, then suppress
Prospects	Joined, never purchased	First-visit offer at their home store

A member's page shows lifetime and 12-month spend, points, purchases, the points ledger, online orders, profile (mobile, age check, joined via, referral), **marketing consent** per channel with the evidence trail (POPIA s69), patient authorisations (the condition itself is never stored), reviews, a JSON **export** of everything held about them (every table, photos listed), and **Anonymise member** for a verified erasure request (POPIA s24): type ANONYMISE and give the request reference. Points are forfeited and consents withdrawn; addresses, wishlists, reminders, push subscriptions and photos are deleted; support requests, review text, return notes, gift-voucher messages and message texts are blanked; sales, tax invoices, dispensing records and refunds stay, as the law requires. Message texts are also blanked automatically 12 months after they're sent.

6.11 Campaigns, the do-not-contact list and social posting

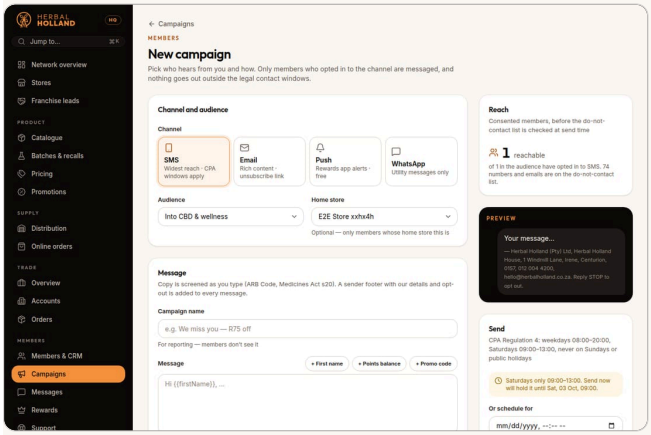

Figure 6.16 New campaign. Channel (SMS, email, push, WhatsApp utility only), audience (a segment, tier or interest) and home store; the reach after consent and the do-not-contact list; the message with placeholders; the preview with the sender footer; send now or schedule, inside CPA Regulation 4 windows (otherwise held).

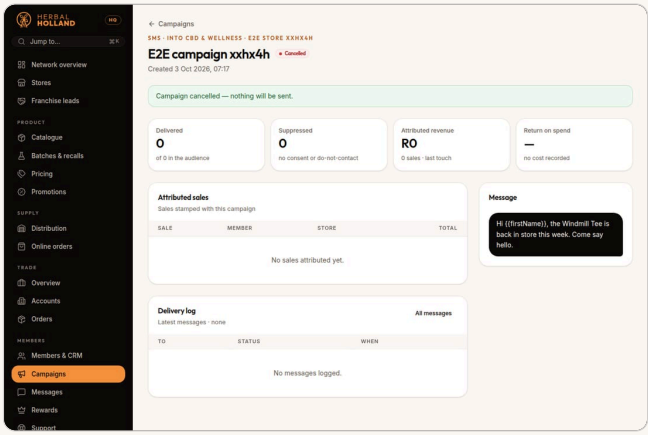

Figure 6.17 A campaign's page. Delivered, suppressed, attributed revenue and return on spend; attributed sales; the delivery log; the message. "Campaign cancelled. Nothing will be sent."

SMS, email and app push to Rewards members: consent checked per channel, the do-not-contact list applied, CPA send windows enforced, and every sale attributed (a promo code or a tracked link stamps the campaign on the sale). Tiles: campaigns sent, messages delivered, attributed revenue and spend in 30 days. A campaign can be sent now or scheduled; area managers save **drafts** for the HQ marketing team; sent or cancelled campaigns can't be edited. Copy is screened as you type (medical claims, conditions, intoxication, minors, absolute claims, food and supplement health claims), a sender footer with our details and "Reply STOP" or an unsubscribe link is added to every message, and SMS is limited to 3 parts.[1]

Do-not-contact list: import the NCC opt-out registry monthly (paste the CSV or one number or email per line, up to 50,000 at a time, with a source). Every send is checked against it. Individual refusals and STOP replies are added too.

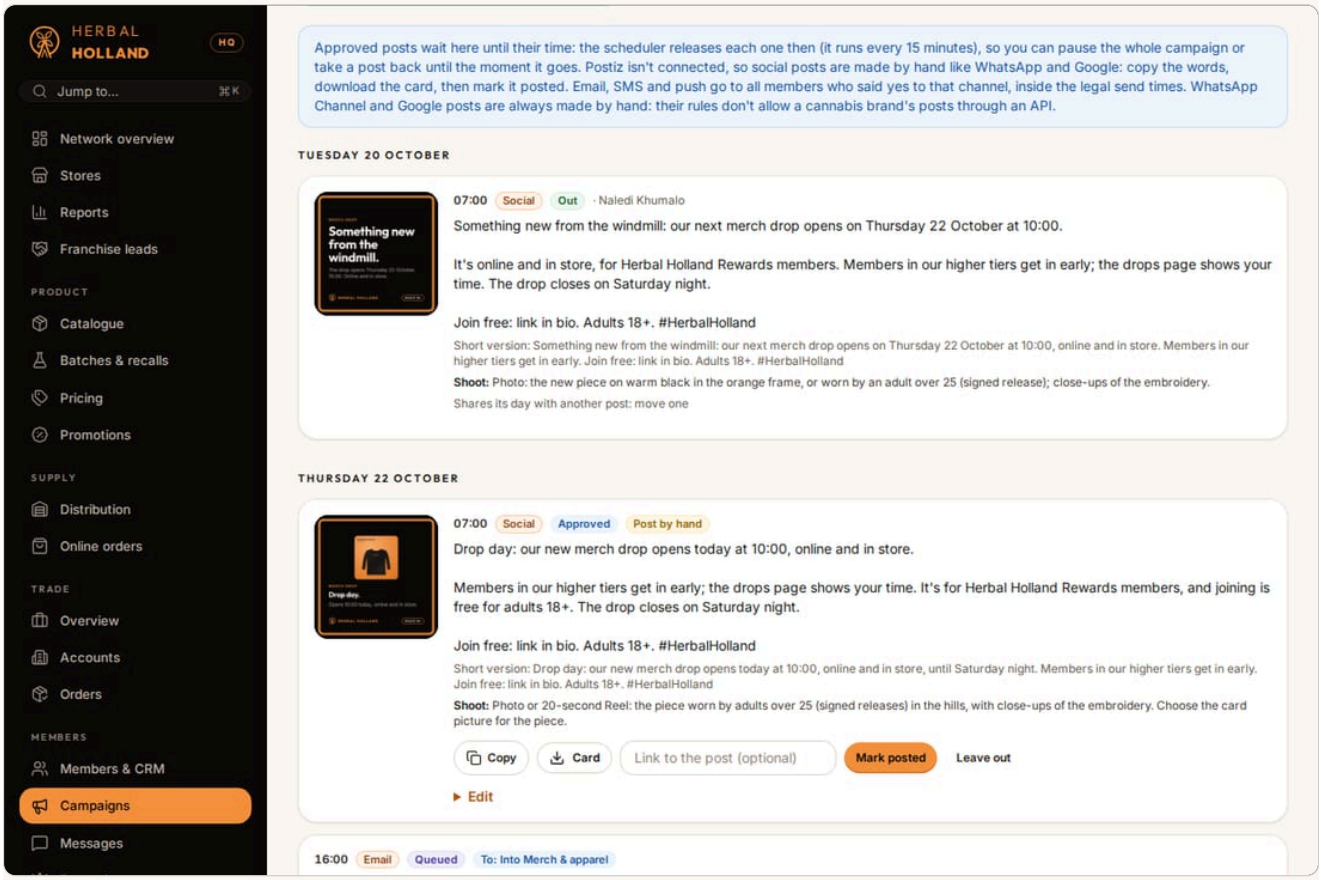

Figure 6.18 Studio. A campaign laid out from its day: each post with its brand card, the channel it goes on, its checks and its status, and the buttons to approve, queue, pause, post by hand or take back.

Studio lays a whole campaign out from one day, its *day T*, from a playbook: the launch's six campaigns (brand launch, online shop launch, store opening, Founding Members, hiring and a merch drop), a product launch, a month of Google posts for one store, the November gift email, and a pack for each month from the festive season to March 2027. Each playbook starts on its own weekday: a Tuesday for the launch and for a product launch, a Friday for hiring, a Sunday for the Founding Members list, a Thursday for a drop and a Monday for a Google month. Any other day is refused, with the reason; the month packs keep their own dates. A post whose words name its day ("today", "tomorrow", "7 days to go", "last call") is *pinned*: it never moves, so a day T that would put it on a public holiday, or a members' message on a Sunday, is refused too. Other posts step off public holidays (and members' messages off Sundays) to the next day that allows them, with

a note. The feed gets one post a day across every campaign: a post that lands on a busy day moves up to three days later at the same time. LinkedIn-only posts don't count.

The launch takes three days in order, the brand, the shop and the doors, and the stores that open: the brand at least 14 days before the shop and the doors at least 33 days after it, so the stores are revealed once the shop is open. The brand's posts stop when the shop opens. Stores that open on the same day post their big moments once, naming every town, and each further store's own feed posts follow a week later, so each town gets its moment. **New campaign** lays out one playbook: its day T, the store for a store opening or a Google month (its name, address and hours fill the copy), and for a product launch the product's page address or a SKU. A product launch fills in the product's facts and goes to the members who chose its interest; licensed medicines are refused.

Every post comes with a brand card drawn in the brand's own type and colours (headline, the hills, an event, a countdown, the Good Neighbour Promise or a merch picture; square, portrait, story and link sizes) and is checked for its channel: the copy rules, no cannabis or CBD hashtags, 4/20 or leaf emoji on social, nothing about products or offers on WhatsApp and Google, the length each channel takes, and no public holidays. Each post shows who it goes to ("To: All members", "To: Into Merch & apparel", "To: First-access list"), whether LinkedIn gets it (*LinkedIn too* or *LinkedIn only*) and, for many social posts, a **Shoot:** line: the photo or Reel that makes it. **I'll post it by hand** keeps such a post out of Postiz, so the team can post it with their own photo or video; until then, the card goes out. Nothing goes out until HQ approves it. **Schedule what's approved** queues them here, and the scheduler releases each at its time: social posts to Postiz with their card, email, SMS and push as campaigns (members who said yes to that channel, inside the legal send times). **Pause releases** holds a whole campaign until you resume it, and **Take back** returns a queued post to draft; a post the scheduler reaches more than six hours late isn't sent, so it can be given a new time. WhatsApp Channel and Google posts, and social posts while Postiz isn't connected, are posted by hand: copy the words, download the card, then **Mark posted** (with the post's link). The scheduler reads back what went out and what failed. With Workers AI set up, any post can be rewritten in the brand's voice and checked again before you use it. **QR codes and links** makes tagged join links, store pages and "WhatsApp the store" codes for windows and flyers, as SVGs for print.

The **First-access list** card holds the people who asked herbalholland.com to hear when the shop opens. The day before it opens, paste the site's export into it (chapter 11): the card says how many people it added. On opening day the shop launch tells each person once, by SMS at 09:00 if they gave only a mobile and by email at 09:05 if they gave an email. The do-not-contact list applies, anyone who has joined by then hears with the members instead, and each sign-up is deleted as its message goes. **Delete the list** clears it by hand.

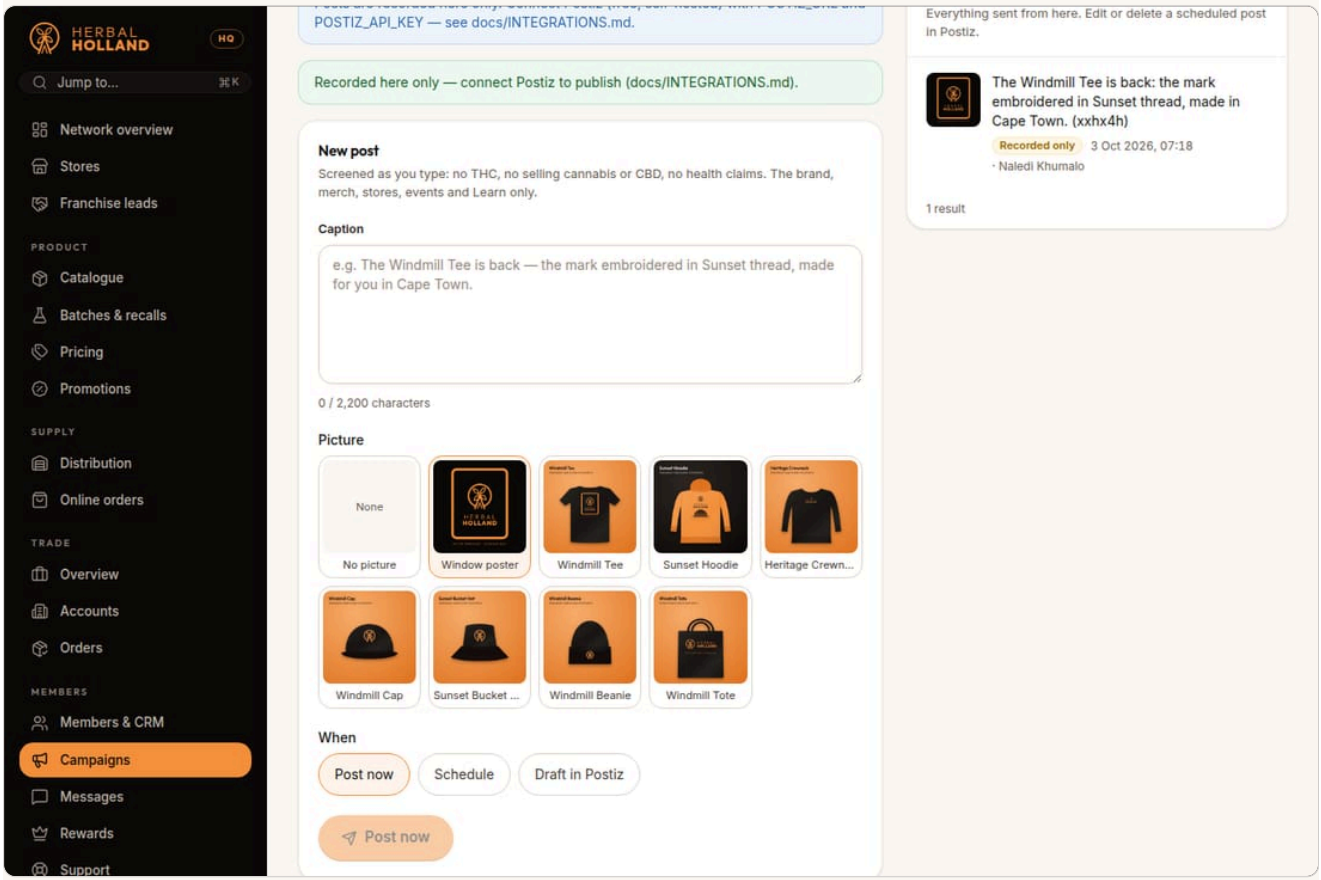

Figure 6.19 **Social.** Write a post once, choose the channels (Instagram, Facebook, LinkedIn, X, Threads via Postiz), a caption screened as you type, brand artwork only (window poster, tee, hoodie, crewneck, cap, bucket hat, beanie, tote), and post now, schedule or draft in Postiz.

Social publishes or schedules the same post on the brand's channels through Postiz. Captions pass every copy rule plus *no THC, and no selling cannabis or CBD* (no buying, price, delivery or discount wording alongside them, because Meta rejects cannabis and CBD ads); pictures are brand artwork only; Instagram needs a picture; X and Threads have character limits; scheduling is at least five minutes ahead. Without Postiz connected, posts are only recorded here. Everything sent is listed, and scheduled posts are edited or deleted in Postiz.

6.12 Messages: every SMS, email and push the platform sent

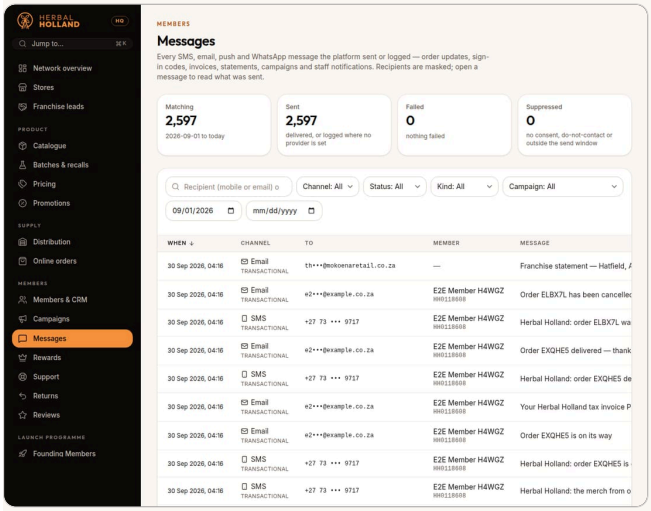

Figure 6.20 Messages. Matching, Sent, Failed and Suppressed for the window; the filters; the list with when, channel and kind, the masked recipient, the member, the first line of the message, the campaign and the status.

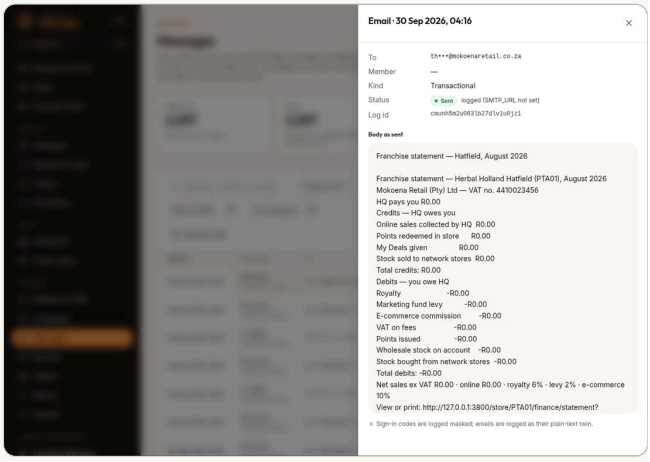

Figure 6.21 A message opened. To (masked), member, kind, status with its reason ("logged (SMTP_URL not set)" in the demo), the log id, and the body as sent.

Messages (`/hq/messages`) is the platform's outbox: every SMS, email, push and WhatsApp message it sent, or logged instead of sending: order updates, sign-in codes, tax invoices, statements, Z-reports, drop and recall notices, staff notifications and every campaign send. HQ administrators and the HQ team see the network; an area manager sees messages to members homed at their region's stores. Filter by **channel**, **status**, **kind** (transactional or marketing), **campaign** and **dates**. The statuses are *Sent* (delivered, or logged where no provider is set), *Failed* (with the provider's reason) and *Suppressed* (no consent, on the do-not-contact list, or outside the CPA send window). Search by the full mobile number, email address or member number; the list itself shows recipients masked ("+27 73 ••• 9717", "e2•••@example.co.za"). Open a row for the detail drawer with the body as sent; the URL carries the message, so a link to one can be shared with the team; emails are logged as their plain-text twin and sign-in codes are masked. The campaigns page and each campaign's delivery log link straight here. The list is always bounded by date: the last 30 days unless you widen it.

6.13 Rewards settings and My Deals

Rewards shows the programme's numbers (outstanding liability at R1 a point, members' savings, issued and redeemed in 30 days, the tier mix, points movement, top members) and its settings:

- **Instant savings by tier**: Seed 3%, Sprout 5%, Bloom 7%, Harvest 10% (higher tiers must save at least as much as lower ones). Members see new prices on their next basket.
- **Programme rules**: points per R100 (5), welcome bonus (25), referral bonus each side after the first purchase (50), birthday bonus (100), minimum redemption (20), maximum share of a basket paid with points (50%). They apply network-wide from the next transaction; setting the earn rate to 0 makes Rewards a pure instant-savings programme.
- **My Deals**: on or off, deal size (5–30%), valid for (3–14 days), *Load My Deals every week*, and *Generate this week's deals now*. Loaded, redeemed, redemption rate and cost in 30 days.
- **Settlement preview**: issued vs redeemed per store from the points ledger, as it will appear on statements (positive means the pool reimburses the store).

6.14 The launch programme: Founding Members, drops and events

Founding Members runs the launch list: set *List closes (SAST)* and the shop trades normally while members join the list. Every member who joins before it closes gets a place, first come first served, moved up by the *friend boost* (250 places) for every friend who joins with their link. When it closes, the scheduler (or **Assign founding numbers now**) numbers the first *founding places* (2,026 by default) as Founding Members, who hold at least the *founding tier* (Sprout) for the *founding months* (14). Numbers are permanent; once assigned, the settings lock. The page charts sign-ups per day, top referrers and places left.[2]

Drops: name and address slug, description (screened), the products (up to 50, never medicines: the form refuses them), opens at, ends at, members only, early-access tier and minutes, per-member limit. A drop's page shows watchers, units sold, stock in stores and at DCs, and the "Notify me" alerts (app push where the member has the app, else SMS, inside legal send times, early-access tiers first). Deleting a drop stops its limits; sales stay recorded.

Events: the hosting store, when, capacity, description (screened), optional welcome gift; a door list CSV; changes show on the event page straight away; an event with tickets can't be deleted.

6.15 Money: finance, statements and commission

Finance: network net sales, store gross profit, franchise fee income and wholesale to stores; net sales by day and by region; fee income split into royalty, marketing fund levy and e-commerce commission with VAT. The **Marketing fund** shows the levy collected against spend on campaigns and My Deals, carried in the fund and reported to franchisees annually (CPA franchise regulations require a separate, auditable account). The **Rewards pool** shows points issued, redeemed, expired or forfeited, the net movement, the outstanding liability and the instant member savings given.

Supplier invoices (HQ › Finance) shows what stores owe outside suppliers, as captured in their back offices, and their stock orders from the distribution centres and each other, which settle on the franchise statements. It shows what is due and overdue per store, with the oldest due date (outside suppliers only), and the full list behind it.

Statements: one monthly statement per store (fees incl. VAT, wholesale on account, online sales collected by HQ, net due to HQ or to the store), and **Email all statements** to each owner's statement address (a company without an address is flagged).

Commission: which stores pay commission, this month so far, awaiting approval; and the network **rates** per product class as basis points of net sales ex VAT (default 2%). Licensed medicines are locked at 0% ("no incentives, by law", Medicines Act s18A) and so are CBD supplements ("no incentives until counsel clears it"); stores' unapproved months use new rates straight away.

6.16 Reports and exports

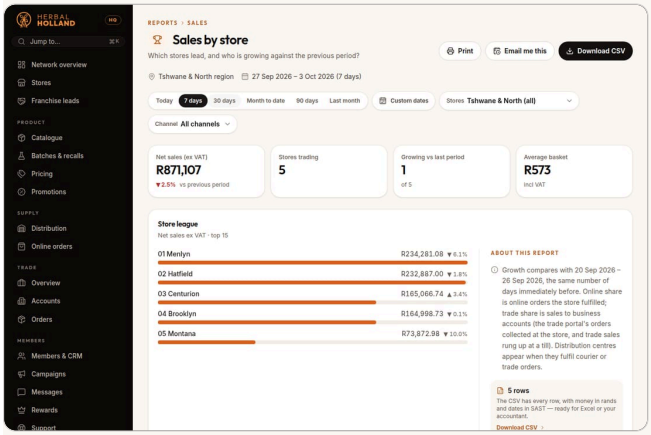

Figure 6.22 Sales by store for the Tshwane & North region over 7 days: net sales, stores trading, growing vs last period, average basket; the store league with drill-down; Print and Download CSV.

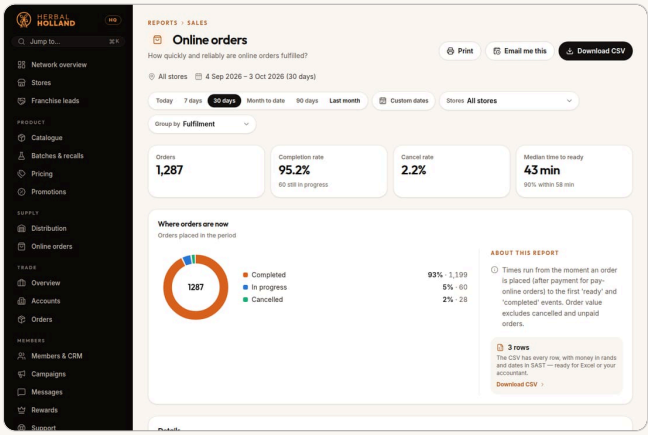

Figure 6.23 Online orders, 30 days, all stores: orders, completion rate, cancel rate, median time to ready, where orders are now, with "About this report" explaining the measures.

Every report takes a date range (today, 7 days, 30 days, month to date, 90 days, last month or custom dates), a scope (all stores, a region, a company or one store; an area manager is always limited to their region), and often a channel or grouping; drills into regions, stores, days, hours, categories and products; and downloads as CSV with every row (not just the 500 on screen), money in rands and dates in SAST. Exports are audited.

Email me this schedules any HQ report: weekly on a chosen weekday or monthly on a day of the month (1–28), to up to ten staff email addresses, never an outside address. The daily job re-runs the report as the person who scheduled it, with their scope and filters, stores the CSV and emails a signed download link that works for 30 days without a sign-in; the report page lists the schedules with "last sent" and **Stop**. Up to 20 schedules per person; scheduling and every run are audited.

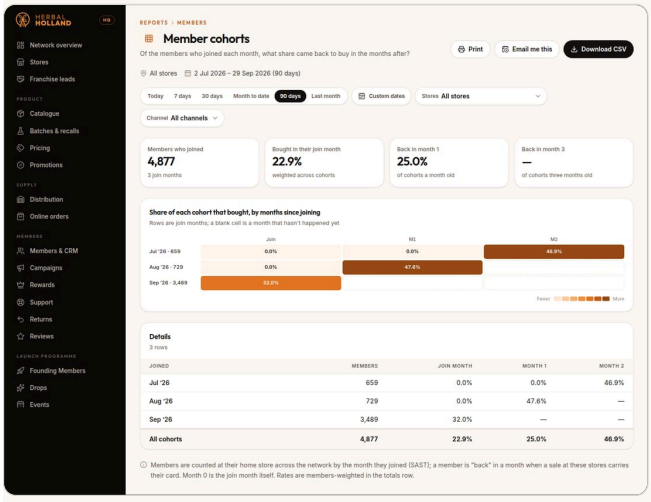

Figure 6.24 Member cohorts. Members who joined, the share who bought in their join month, back in month 1 and month 3; the cohort matrix by months since joining; Print, Email me this, Download CSV.

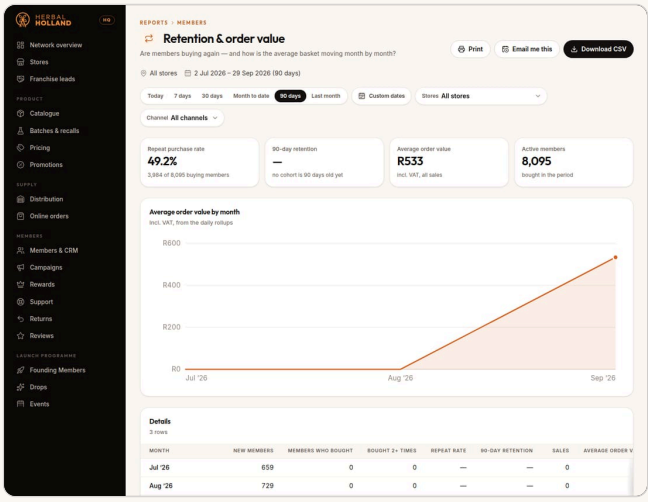

Figure 6.25 Retention & order value. Repeat purchase rate, 90-day retention, average order value and active members, with the order-value trend by month.

Group	Report	The question it answers
Sales	Sales overview	How did we trade each day? Sales, VAT, discounts, baskets and margin.
	Sales by product	Which products sell, and at what margin?
	Sales by category	Which categories drive sales and profit?
	Sales by store	Which stores lead, and who is growing against the previous period?
	Sales by hour	When are the tills busiest? Plan rosters around the busy hours.
	Sales by staff	How is each person at the till doing? Sales, baskets, member sign-in and refunds.
	Refunds	What came back, who processed it, and why?
	Payments & tenders	Do the takings match the bank? Tenders by day for reconciliation.
	Online orders	How quickly and reliably are online orders fulfilled?
	Trade sales	Which business accounts buy, what they take and what it's worth, by account, product and month (chapter 7).

Group	Report	The question it answers
Inventory	Stock valuation	What is the stock on hand worth, at landed cost and at retail?
	Stock movements	Every unit in and out: receipts, sales, transfers, adjustments and counts.
	Shrinkage	What are we losing to damage, theft, expiry and count variances, and what does it cost?
	Expiry	What stock is about to expire, or already has, and what is it worth?
	Dead stock	What is sitting on the shelf without selling?
	Sell-through	How fast is each product turning, and how many days of stock are left?
	Low stock	What is at or below its reorder point, and how much should we order?
	Negative stock	Where has the till sold more than the system says we had?
Purchasing	Purchases	What stock did we buy, from which DC or store, and for how much?
	Receiving discrepancies	Did we receive what was ordered and shipped? Short shipments and losses in transit.
Finance	Profit & loss	Are we making money? Sales, margin, expenses and franchise fees against the previous period.
	VAT (VAT201 working)	What VAT do we owe SARS for the period, output tax against input tax?
	Cash-ups	Did the cash drawer balance at every shift close?
	Cash banking	Did each day's cash reach the bank, in full and on time?
	Franchise statements	What does each franchisee owe HQ, or get paid, for the month?
	Rewards liability	Points issued vs redeemed by store, the settlement, and what we owe members.
	Trade aged balances	What each trade account owes, current and 30, 60 and 90+ days past due, as of today (chapter 7).
Members	Member segments	Who are our members? Recency, frequency and value segments with the play for each.
	New vs returning members	Are we winning new members each week, and bringing them back?
	Member attach rate	What share of transactions are linked to a Rewards member?
	Rewards savings	How much do members save instantly at the till, and do they spend more than walk-ins?
	Where members joined	Which QR codes, links, events and partners bring in new members?
	Member cohorts	Of the members who joined each month, what share came back to buy in the months after?
	Retention & order value	Are members buying again, and how is the average basket moving month by month?
Marketing	Promotions	What did each promotion cost in discounts, and what sales did it drive?
	Campaigns	Which campaigns reached members and paid for themselves?
Compliance	Age checks	How was each buyer's age confirmed, and did any restricted sale slip through?
	Dispensing register	Every licensed (THC) sale with the patient's authorisation, prescriber, batch and dispenser.
	Compliance events	What did the compliance engine block or flag, where and why?
	Recalls & quarantine	Recalled or quarantined batches: what was sold, who has it, and what is still on the shelf.
	Batch trace	Pick a batch: which stores hold it and which members bought it.

6.17 Governance: loss prevention, compliance, audit log, announcements and team

Loss prevention (network or region): open high-severity alerts, open alerts, resolved this month, value at risk; alerts raised per week; a store risk ranking; the alert queue; **Rules & thresholds** (audited, applied from the next check; chapter 11 lists every rule) and **Run the checks now**. They run every night, at each shift close and when cash is banked; alerts already raised aren't raised twice.

Compliance is the rulebook (chapter 10): THC mode, the licensed classes, minimum age (18–25, never below 18), age-restricted classes, the class × channel matrix, the daily limit in adult-use mode, Tobacco Bill mode, members only, and "No promotions, points or commission" classes. It also keeps a watch-list of the laws in motion (the Cannabis for Private Purposes Act and its regulations, the Cannabis Bill, the Tobacco Bill B33-2022, Schedule 0 CBD GN 586, the VAT Act s7(4) judgment, the CPA opt-out registry) with what each means for the settings. Switching to adult use needs the words ADULT USE typed; THC must stay licence-gated.

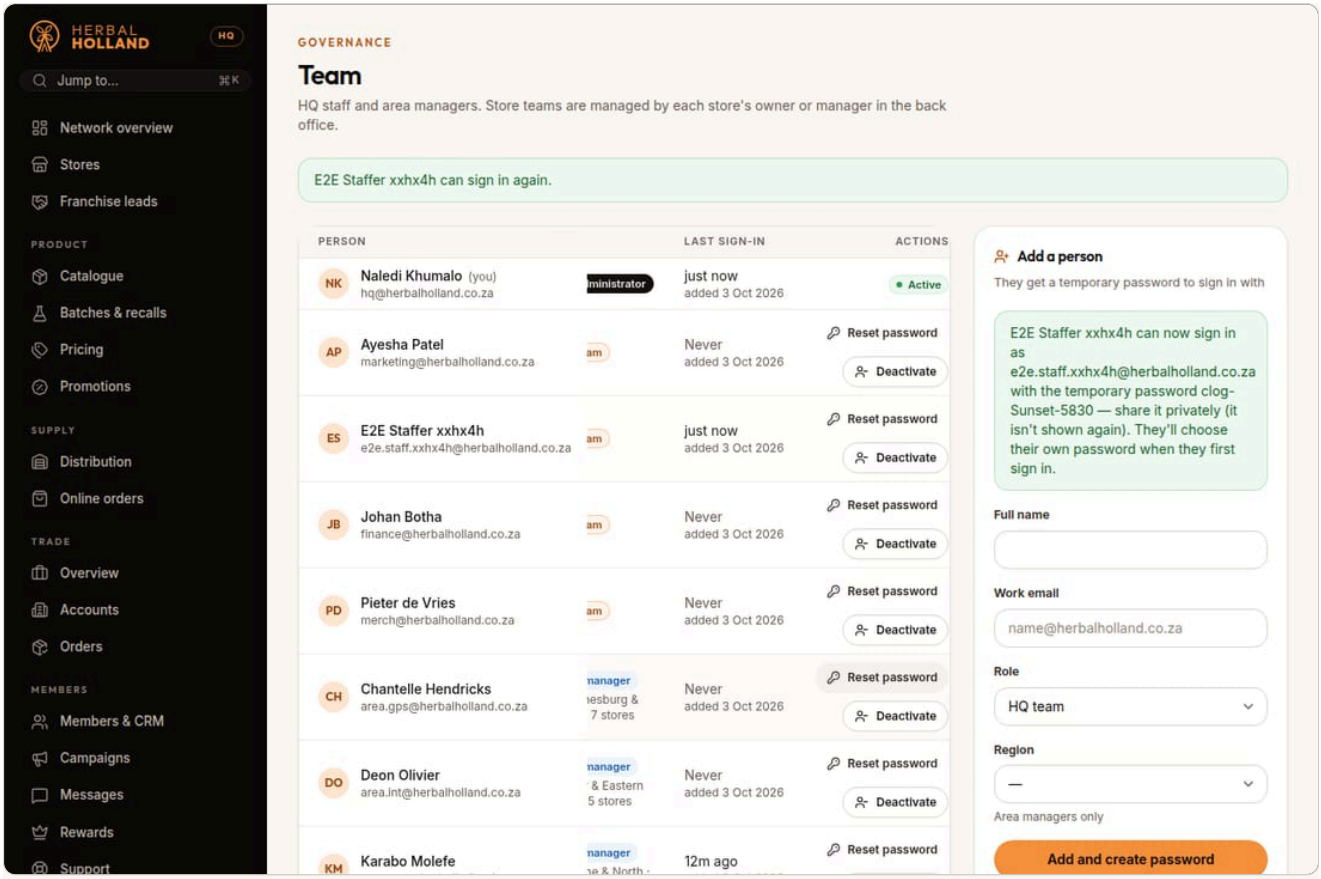

Figure 6.26 **Team.** HQ staff and area managers with their role, last sign-in, reset password and deactivate; adding a person creates a temporary password they must change on first sign-in; area managers need a region.

Audit log: every sensitive action across the network (who, what, where and when), filtered by person, activity and dates; entries can't be edited or deleted. The exceptions worth reviewing are in chapter 11. **Announcements**: news, launches, policy changes and recalls for store teams, to everyone or a region, with "Managers must acknowledge" (always on for policies and recalls). They stay on the store dashboard until acknowledged, and HQ sees who has. **Team**: HQ administrators, HQ team and area managers (store teams are managed by each store); at least one active HQ administrator must remain.

1. The store's local campaign form allows SMS of up to 459 characters and HQ's up to 480; both are "3 parts". A campaign's page shows its own delivery log; every message it sent or suppressed, with the reason, is in HQ › Messages.
2. The platform's defaults are the numbers herbalholland.com publishes: **2,026** places and **14 months** at Sprout. Check them in HQ › Founding Members before the list opens: once numbers are assigned the settings lock.

7

CHAPTER 7

Trade: selling to businesses

Licensed and registered businesses (pharmacies, independent retailers, cafés, wellness practices, wholesalers) buy at **trade prices ex VAT** in **whole cases**, couriered from a distribution centre or collected at a store. They prepay by EFT against a pro forma, or buy **on account** within a credit limit. Never licensed medicines.

IN THIS CHAPTER

7.1 Who trade customers are, and what they can buy

7.2 Applying, and approval

7.3 The trade portal: range, cart and checkout

7.4 HQ: accounts

7.5 HQ: the ledger (payments, credit notes, adjustments, statements and holds)

7.6 HQ: orders (confirm the EFT, pick, ship, short-ship, cancel)

7.7 The store: trade click & collect orders

7.8 The till: trade-sale mode

7.9 Finance: how trade money flows

7.10 Reports

7.11 Settings and jobs

7.1 Who trade customers are, and what they can buy

A trade account belongs to a business that sells to adults (a pharmacy, an independent retailer, a café or restaurant, a wellness or health practice, an online shop, a wholesaler or distributor, or another business HQ approves) and that holds the **licences its kind of business needs** for what it buys (below). Its buyers are adults, 18 or older; the applicant confirms this and keeps it true. Everything the business buys is priced **ex VAT**, with VAT worked out per line, and ordered in **case packs**.

The trade channel is a third channel beside the shop and the till: every trade sale posts in the **WHOLESALE** channel, so the dashboards, the franchise statement and the reports keep it apart from retail. It reaches the buyer in two ways: the **trade portal** at `/trade` (orders fulfilled by a distribution centre or a store) and **trade-sale mode on any till** (a business buying over the counter). HQ runs the accounts, the ledger and the DC's queue under **HQ › Trade**; a store sees the click & collect orders it fulfils under **Store › Trade orders**.

Range (product class)	Who it suits	Traded?
Licensed (THC)	—	**Never, whatever licences either side holds**
CBD supplements (Schedule 0)	Pharmacies, practices	**Yes, when ticked for the account**
CBD food & drink	Cafés, retailers	**Yes**
CBD skin care · Hemp · Supplements	Pharmacies, practices, retailers	**Yes**
Accessory · Apparel · Grow	Retailers, cafés (accessories), online shops	**Yes**

HQ ticks the **ranges the account may buy** when it approves the account; a line outside them is refused everywhere ("... is CBD food & drink, which this account isn't approved to buy"). Where a class needs a licence, the seller must hold it. Products must be live; made-to-order merch (no stock) is never on the trade list.

Prices. A line's trade price is the account's own trade price list if HQ assigned one, else the live *trade* price lists by priority, else the variant's *wholesale price* (what stores pay). Trade lists hold ex-VAT prices and **quantity breaks** (a lower price from a minimum quantity; the portal shows "Buy more, pay less: 36+ at R..."). VAT at 15% is added to each line and rounded half up to the cent, never backed out of a shelf price. No points, member prices, My Deals or gift vouchers touch a trade basket; a promotion applies only when HQ included the trade channel in it.

Cases and the minimum. Each variant has a **case pack** (six oils, twelve coffees, twenty-four papers; one for grow equipment and apparel). Portal orders are placed in whole cases and must reach the **minimum order** (R2,000 ex VAT by default) after any promotion. The till is not bound by cases or the minimum: a business buying over the counter takes what is on the shelf.

> RULE
> Licensed (THC) medicines are never supplied on a trade account. The portal does not list them, HQ's order form refuses them, and the till's trade mode blocks them, however the store is licensed and whatever the buyer asks. Age-restricted items (18+) still need the usual ID check at a counter; a trade sale replaces the *member* rules, not the *adult* ones.

> IN THE DEMO
> The seeded network has fourteen trade accounts (TA-000001 Greenleaf Pharmacy to TA-000014 Garden Route Health Shop): nine approved (five on account with limits from R10,000 to R50,000 and 30-day terms, four prepaid), two pending applications, two on hold (one overdue, one held by HQ) and one closed; the "Trade 2026" price list with breaks on most lines; some fifty portal orders at every status; trade sales at the tills; and the ledgers, payments, a credit note and last month's statements behind them. Every account has the licences its kind needs, with sample documents marked as such (Linden Corner Store, a sole proprietor, holds its SARS registration): verified for the approved, held and closed accounts, waiting for HQ on the two applications; Midlands Wellness Practice's practice number lapses next week with its renewal waiting, Stellenbosch Physio's in a fortnight with nothing sent yet, and Vilakazi Street has sent the new company certificate its hold is waiting for. The demo buyer is Greenleaf's owner, `trade@greenleafpharmacy.co.za`.

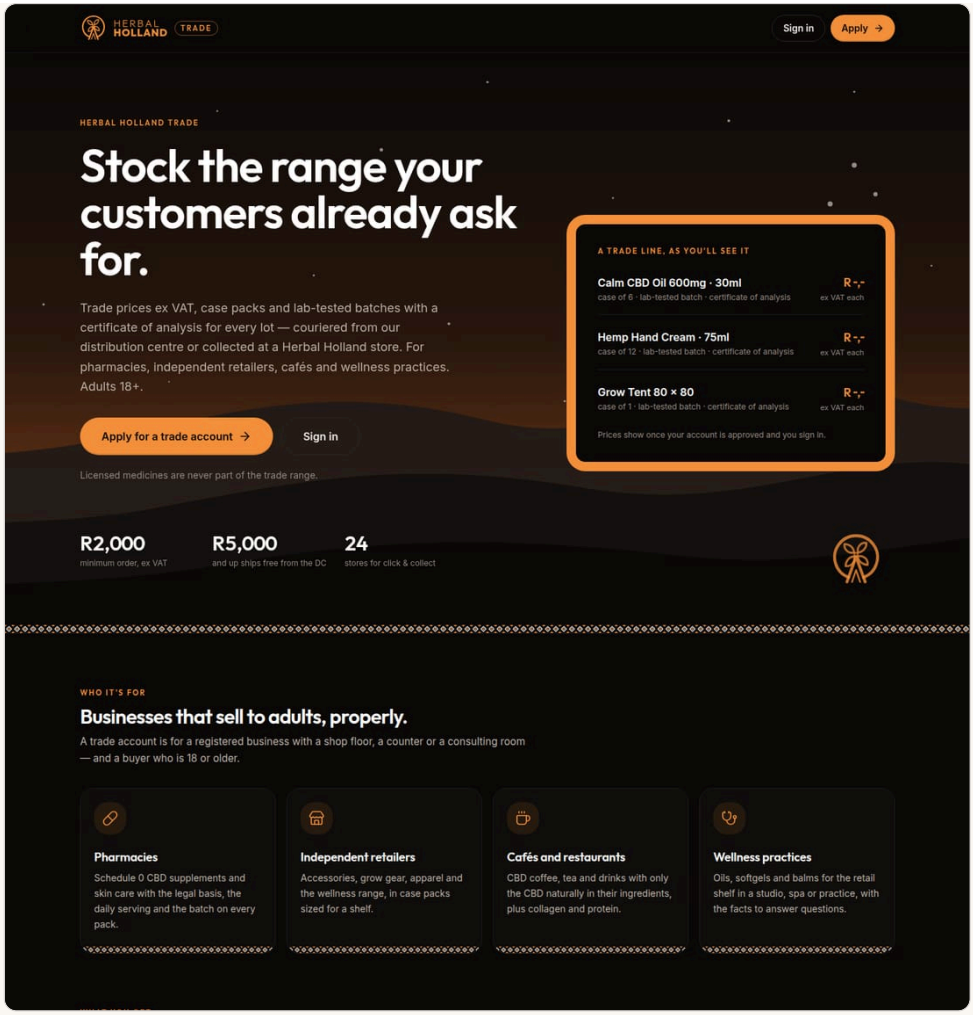

Figure 7.1 **Herbal Holland Trade** at /trade, signed out: who it is for, what an account comes with, the range by category (counts only; prices after sign-in), how it works, and the two doors: apply or sign in.

7.2 Applying, and approval

From the landing page a business taps **Apply for a trade account** (`/trade/apply`). The form takes about five minutes with the documents to hand: the **registered (legal) name** and an optional trading name, the **kind of business**, the **company registration number** (2015/123456/07; required for the kinds that need the company registration, optional for the rest) and an optional **VAT number** (ten digits starting with 4, checked for shape), the **billing email** (pro formas, tax invoices and statements go there), the business phone and street address, **Deliver somewhere else** for a separate delivery address, the **ranges** it would like to buy, the **licences** those need (each with its number, its expiry date where it lapses, and the document), the first **buyer's name, email and mobile** (the mobile gets a text when a collection is ready), anything we should know, and two ticks: *every buyer who orders for this business is 18 or older*, and the **trade terms** (`/trade/terms`, version `trade-1`, recorded on the account with the time).

The licences each kind of business needs

Licences are **mandatory**: there is no application without every one the kind of business needs for the ranges it ticked, and no approval, order, shipment, collection or till sale until HQ has verified them and while they are in date. The rules live in one place (`src/lib/trade-licences.ts`) and are the business's compliance policy, signed off by counsel:

Who	Licence or registration	Law · issuer	Lapses?
Pharmacy	Pharmacy licence (to own the pharmacy) and the SAPC pharmacy recording	Pharmacy Act 53 of 1974 · the Department of Health; the South African Pharmacy Council	No
Health practice	Practice number	BHF PCNS, with HPCSA or AHPCSA registration	**Yearly; expiry date required**
Café or restaurant	Business licence and a certificate of acceptability for the premises	Businesses Act 71 of 1991 · the municipality; R638 of 2018 · environmental health	No
Retailer or online shop (a company)	Company registration certificate (for the registration number on the form)	Companies Act 71 of 2008 · CIPC	No
Retailer or online shop (a sole proprietor)	SARS tax registration: the owner's income tax reference number and SARS's notice of registration	Tax Administration Act 28 of 2011 s22 · SARS	No
Wholesaler or distributor, other business	Company registration certificate (these must be companies)	Companies Act 71 of 2008 · CIPC	No
Wholesaler or distributor buying CBD supplements	SAHPRA licence to wholesale or distribute	Medicines Act 101 of 1965 s22C · SAHPRA	**Yes; expiry date required**
Anyone buying CBD food & drink	Certificate of acceptability (food premises)	R638 of 2018 · environmental health	No

Section 4 of the form, **Licences**, lists them as soon as the kind of business and the ranges are chosen, each with the reason and the issuer: **Licence number** (the company certificate uses the registration number above), **Expires on** for one that lapses, and **The document**: a PDF, or a clear photo (JPG or PNG) of the whole licence, up to 5 MB. The form checks everything in the browser before sending, so a typing mistake never costs the attached documents. The server then checks each document by its contents (a file that only claims to be a PDF is refused, and nothing is kept until every document passes); if one comes back, the form keeps what was typed and says *Attach the documents again*. A shop or online shop without a company registration number applies as a **sole proprietor**: the form then asks for its SARS tax registration instead of the CIPC certificate. Pharmacies, practices and cafés can be sole proprietors too; wholesalers, distributors and other businesses must be companies. A sole proprietor that registers a company later sends the CIPC certificate first (typing its number), and adds the number to the business details once HQ has verified it.

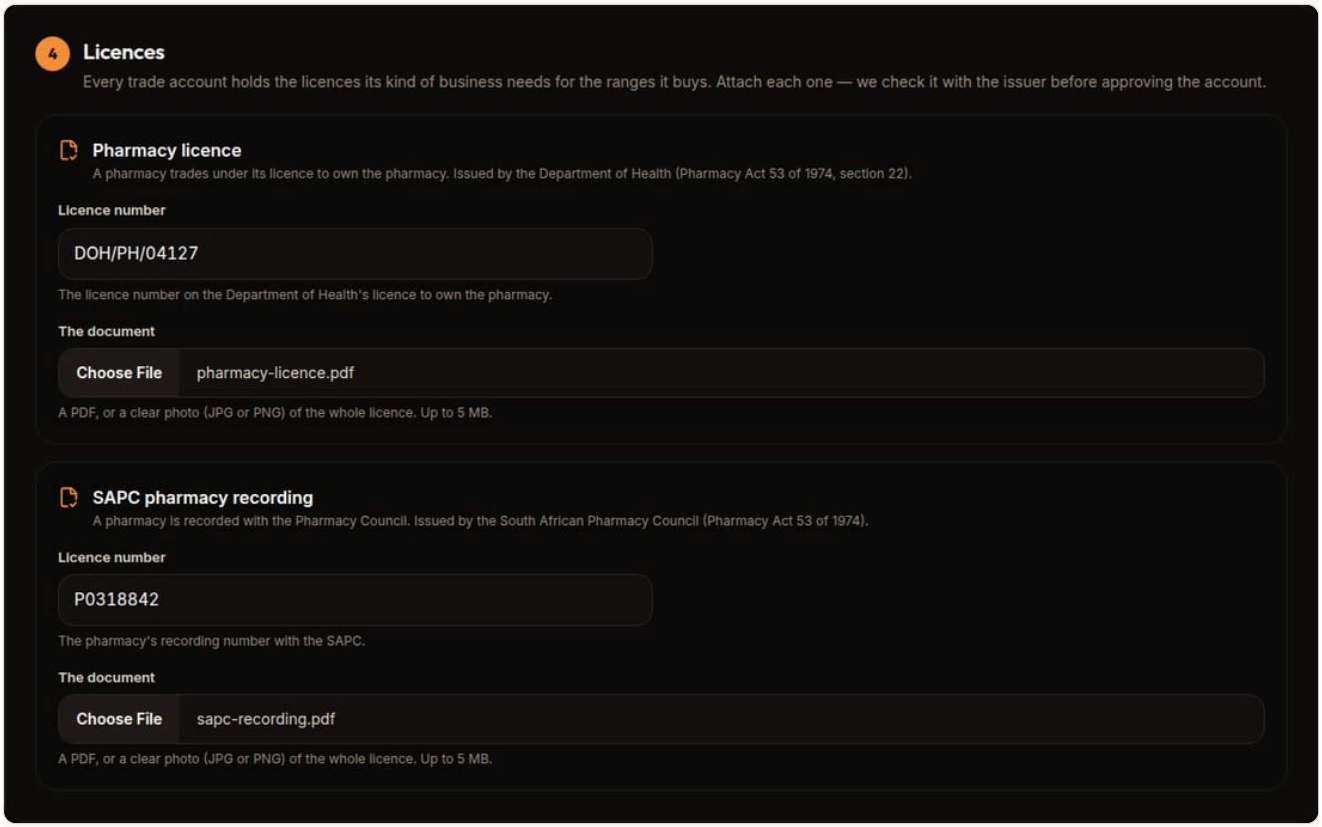

Figure 7.2 **Licences** on the application, for a pharmacy buying CBD supplements, skin care and accessories: its pharmacy licence and SAPC recording, each with the number and the document.

1. The application becomes a **pending** account numbered **TA-000123** with its first buyer as the account's **owner**. The buyer gets an acknowledgement ("We've got your application"); the trade team gets a notice at `TRADE_EMAIL` (else the franchise address) with the business and the ranges requested; contact details stay in HQ (POPIA).
2. The buyer can already sign in: the range shows without prices ("Trade price after approval"; "Ordering opens on approval") and the account page says the application is being reviewed.
3. HQ › Trade › **Accounts** › **Pending** (or **Licences to check**) › the account. The **Licences** card comes first: each licence the business needs, its state (*To check*, *Verified*, *Not accepted*, *Expires within 30 days*, *Expired*, *Missing*) and every document sent for it. **View document**, compare it with the issuer's register (SAPC, the municipality, BHF PCNS, CIPC, SARS, SAHPRA), then **Verify**, or **Not accepted** with what's wrong, which is emailed to the account so its buyer can upload another under Account › Licences. Until every required licence is verified, the approval card says **Verify the licences first** and approving is refused.
4. Then **Approve with terms**: **Terms**, either *Prepaid (EFT before picking)* or *On account (credit terms)*; **Credit limit (R)** and **Payment days** (default 30) for an account on credit; **Ranges the account may buy**; an optional **Trade price list** (blank: the live trade lists by priority, else the wholesale price); the **Distribution centre** that fulfils its courier orders (blank: the default DC); and **Notes** for the trade team, which the account never sees. Tap **Approve account**.
5. Ticking a range at approval that needs another licence (CBD food & drink: the certificate of acceptability) is refused until that one is verified too. The approval email ("You're approved") carries the terms: on account with its payment days and limit, or prepaid; the ranges; the minimum order; courier and collection fees. New accounts normally start prepaid; account terms follow once the relationship is known.

An account is one of **Pending approval**, **Approved**, **On hold** or **Closed**. A hold stops anything new going on account (EFT orders still work); closing signs every buyer out for good, and any balance stays due. Both are explained in "HQ: accounts" below.

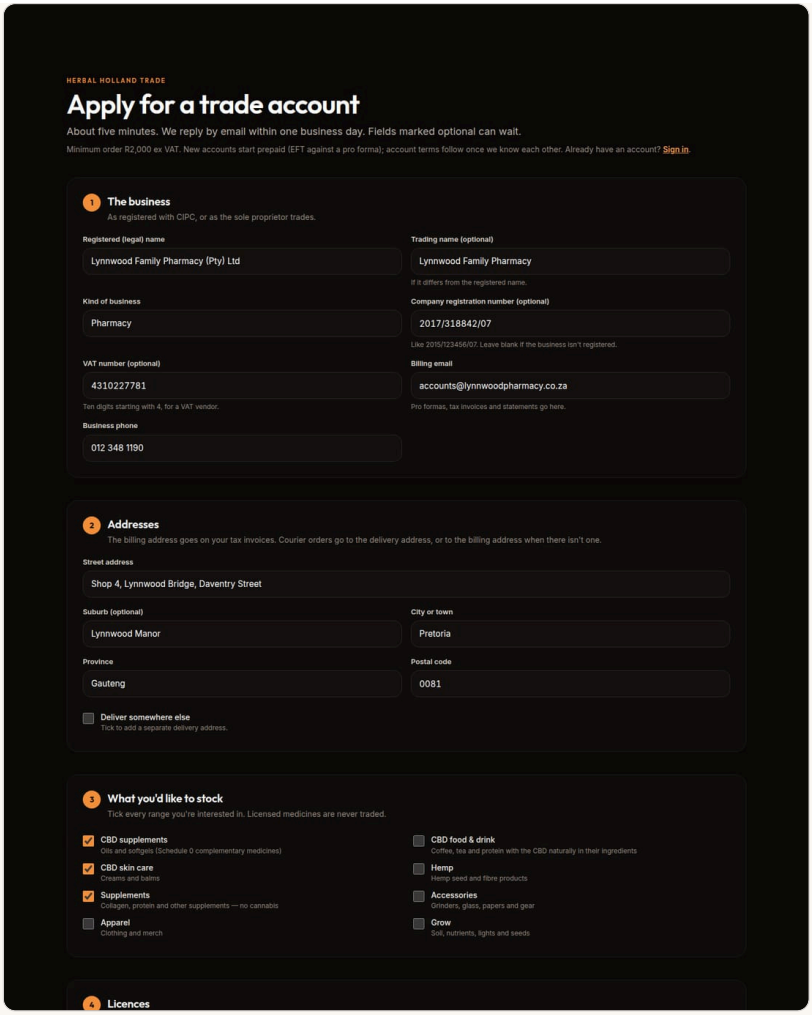

Figure 7.3 **Apply for a trade account.** Business, numbers, billing email, address, ranges, the licences they need, the first buyer, and the two ticks (adults 18+, the trade terms).

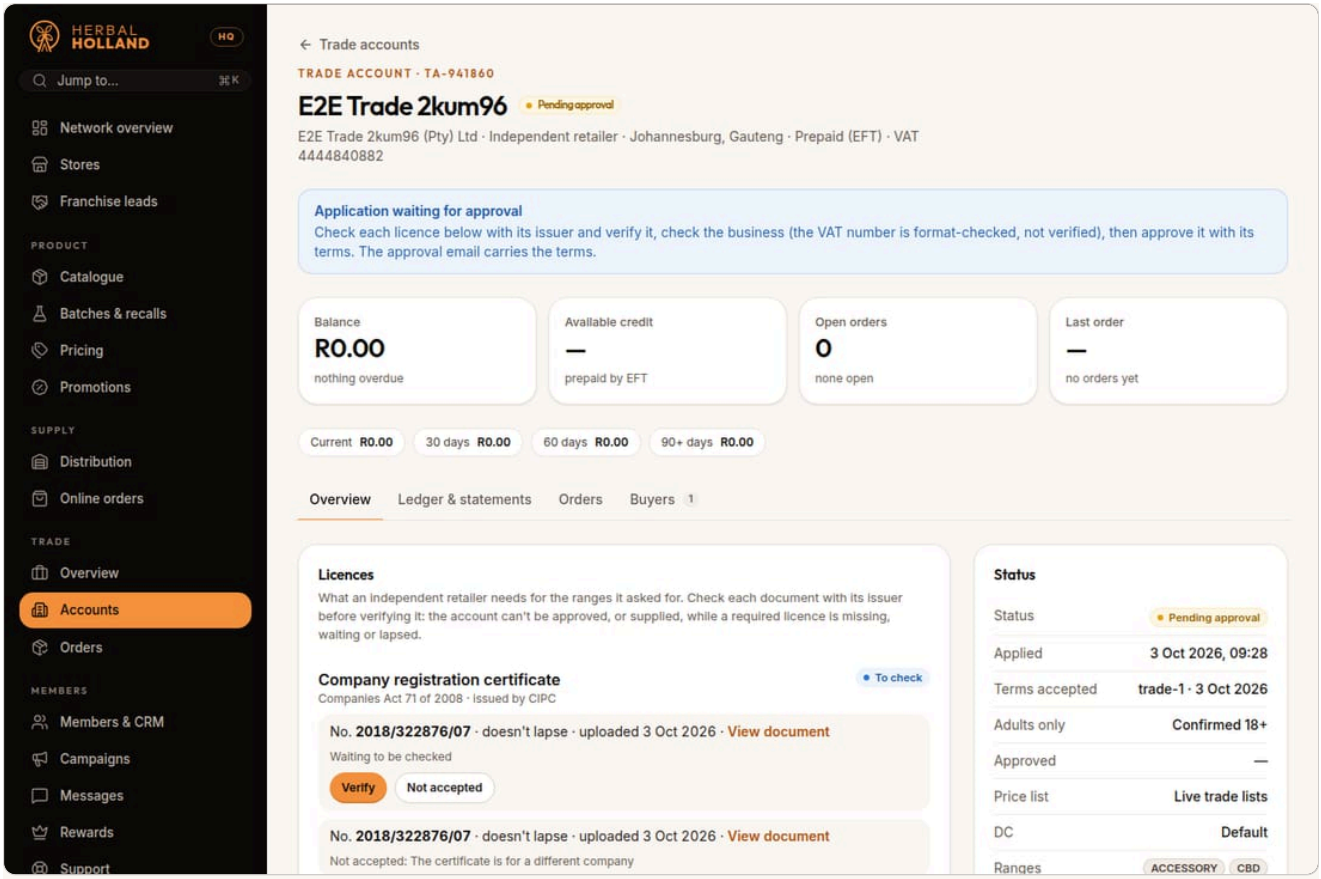

Figure 7.4 **Licences** on a pending account in HQ: the first company certificate was not accepted (the reason went to the account); the one sent again waits with **Verify** and **Not accepted**.

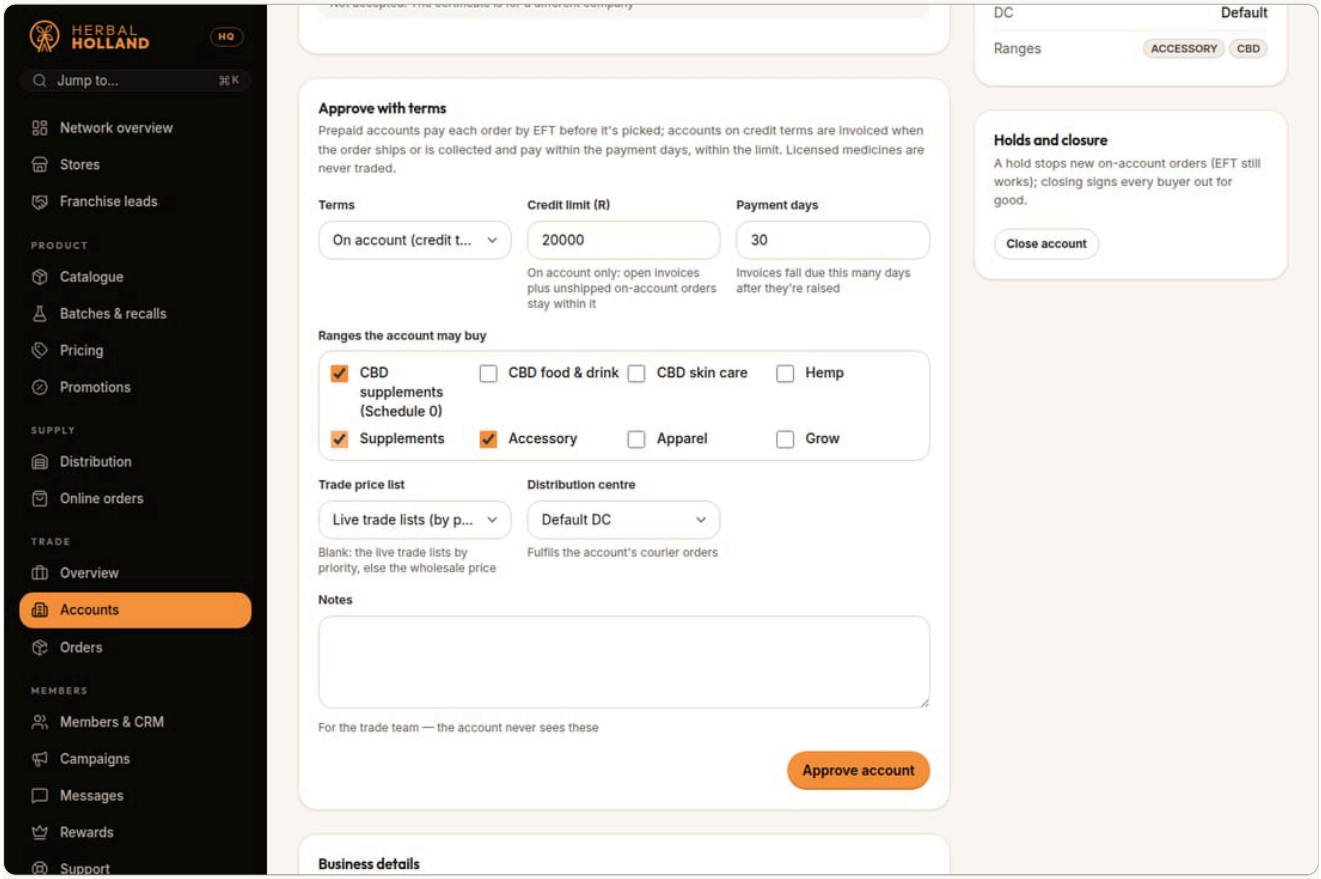

Figure 7.5 **Approve with terms.** Prepaid or on account, the credit limit and payment days, the ranges, a trade price list and the serving DC; the business details below go on every tax invoice.

7.3 The trade portal: range, cart and checkout

Signing in. `/trade/login` asks for the buyer's email address and sends a **6-digit code** (it works once and expires in ten minutes; five codes per address per ten minutes; five wrong tries end a code). There are no passwords. A session lasts twelve hours. A buyer whose account is pending can sign in and look; one on hold can sign in, see prices and statements; one on a closed account cannot sign in at all. In demo mode the code is shown on screen.

The portal's menu is **Range · Orders · Statements · Account**, with the **Cart** and **Sign out** on the right.

The range

The trade range is priced and stocked from the account's distribution centre ("Stock and courier orders from Midrand Distribution Centre"). Search by product, SKU or barcode; filter by category. Every line shows the product and size, a stock tag (in stock, low with the units left, or out), the SKU, its range, its **case of 12** (or "sold singly") and the RRP; then the trade price: **R... ex VAT each · case of 12 · R... a case**, with the price rule that set it (the list's name, "Trade 2026 (36+)" when a break applies) and the breaks the buyer can reach ("Buy more, pay less: 36+ at R..."). A case stepper adds whole cases to the cart; the bar at the foot of the page keeps the cart's subtotal and how far it is from the minimum order in view.

The cart

Your cart belongs to the account: every buyer at the business sees the same lines, on any device, and a line another buyer adds while you check out stays in the cart. It re-prices every line with the trade engine at the DC: the unit price ex VAT, the cases, and **Ex VAT · VAT · Incl. VAT** per line; a case stepper and **Remove** on each; **Add more lines** and **Empty the cart**. The totals panel shows **Subtotal ex VAT**, any promotion, "Courier or handling: chosen at checkout", **VAT @ 15%** and **Total incl. VAT**, and how far the cart is from the minimum ("R450.00 more to reach the R2,000.00 minimum (ex VAT)"). Problems appear as callouts and keep **Checkout** off until they are fixed: a quantity that is not whole cases ("... comes in cases of 12: order 12, 24, 36... "), an order under the minimum, a line the account may not buy, a line no longer on the trade list, and **Short at the DC right now**, which is a warning only: "You can still order; a line we can't fill in full ships short and is invoiced for what went."

Checkout

How you'll get it. Courier from our DC (a flat R150 ex VAT, free from R5,000 ex VAT; the figures come from HQ's settings) to the account's **Delivery address** or **Billing address**; or **Click & collect at a store** with R75 ex VAT **handling** ("your driver collects with a code"). For collection the page lists participating stores, the account's province first, each with what it has on the shelf for this cart right now ("All lines in stock", or which lines are short and by how much); a store that cannot sell a class (a licence it lacks) is not offered.

How you'll pay. EFT (pro forma), or **On account** when the account is approved on credit terms and the *credit decision* allows it: what the account owes, plus its open on-account orders, plus this order must stay within its credit limit. The page says what is available, and why not when it is not ("Over the credit limit: R1,250.00 available on a limit of R10,000.00 (owing R6,100.00, R2,650.00 on open orders). This order is R3,220.00"). A **reference** (the buyer's PO number, printed on the pro forma and the invoice) and **notes for us** are optional. The button reads **Place order on account · R...** or **Place order · pay R... by EFT**.

EFT	The order waits as **Awaiting EFT** with nothing reserved. The buyer gets the **pro forma** by email: the amount, the bank details HQ set, and the reference to put on the payment: **HH-TO-000123**. When HQ confirms the money (below), the stock is reserved and the order is confirmed. Unpaid after the EFT hold (three days by default), it lapses: the daily job cancels it and emails "Payment not received within 3 days".
On account	The order is confirmed at once ("Confirmed, stock reserved"), the stock is reserved at the DC or the store, and it counts against the credit limit until it ships or is collected. Then the tax invoice is raised, and it falls due the account's payment days later.

Orders, statements and the account

Orders lists every order on the account, newest first, filtered by *All · Open · Awaiting EFT · Confirmed · Ready to collect · Shipped · Collected · Cancelled*, each with its fulfilment and store, payment, lines, the buyer's reference and the invoice number. An order's page has the timeline, the pro forma and EFT reference, the courier and tracking, the **collection code** once a collect order is ready, and the tax invoice to view or print; **New order** and "Reorder from a past order" start the next one.

Statements lists one month per line with its closing balance ("month to date" for the current month); a month's statement shows the opening balance, every invoice, payment and credit note with the balance after each, the closing balance and its age analysis. The same statement goes out by email on the statement day.

Account shows the terms (*On account* with the payment days and limit, or *Prepaid (EFT)*), the **balance owing** and what is past due, the **available credit** ("R6,120.00 used of R50,000.00 (R3,300.00 on open orders)"), the **age analysis** (Current · 30 days · 60 days · 90+ days), the ranges the account may buy, and the business details. The **owner** can edit the details; terms, limits, ranges and price lists are HQ's. **Buyers** lists who may sign in. An owner adds a buyer (name, email, phone, owner or buyer), who gets a code the first time they sign in; removing a buyer signs them out everywhere. An account always keeps one owner.

Licences (on the account page) lists each licence the business needs with its state (*Verified*, *Expires soon*, *Being checked*, *Not accepted* with HQ's reason, *Expired* or *Needed*), its number and expiry, and **View the document** (served by the app to the account's own buyers and HQ only, never as a public link). **Upload a licence or its renewal** takes the licence, its number, the expiry date where it lapses and the document, and sends it to the trade team to check. A renewal waiting for HQ doesn't interrupt anything while the current licence is in date. Any licence can be sent, not only the ones the account needs now: a café that wants CBD food & drink added sends its certificate of acceptability first; it shows as *on file* until HQ adds the range.

> **WHEN ORDERING IS PAUSED**
>
> An account on hold still sees prices and its statements, and may still pay an order by EFT, but nothing new goes on account ("This trade account is on hold. Settle the account, or speak to Herbal Holland Trade to lift it"). A hold for an overdue invoice lifts by itself the moment what is past due is settled; a hold HQ placed is lifted by HQ. **Licences** pause ordering altogether: a month before a licence lapses the account is reminded; once a required licence has lapsed (or is missing or not accepted) no order can be placed, shipped or collected and no till will sell to the account, and the daily job puts it on hold with the reason "licence". The hold lifts the moment HQ verifies the renewal.

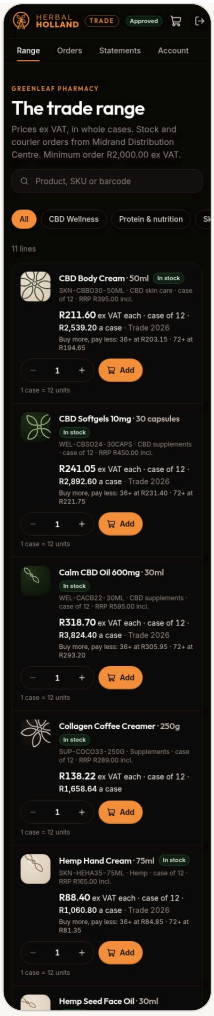

Figure 7.6 **The trade range.** A line with its case pack, price ex VAT each and per case, the breaks it can reach, the stock tag and the case stepper.

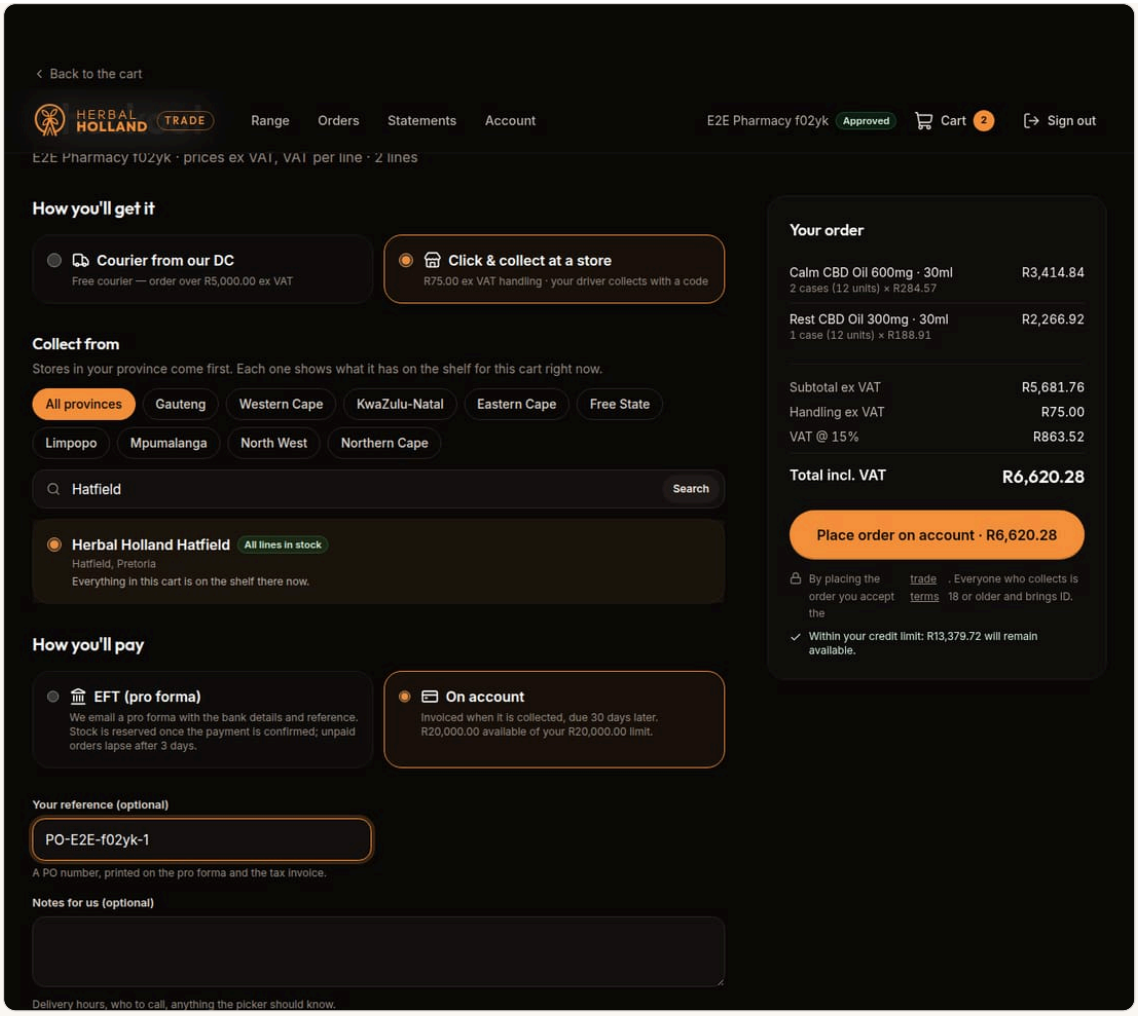

Figure 7.7 **Checkout.** Courier from the DC or click & collect at a store (stores in the province first, stock for this cart at each), EFT or on account with the credit decision, the totals with VAT per line.

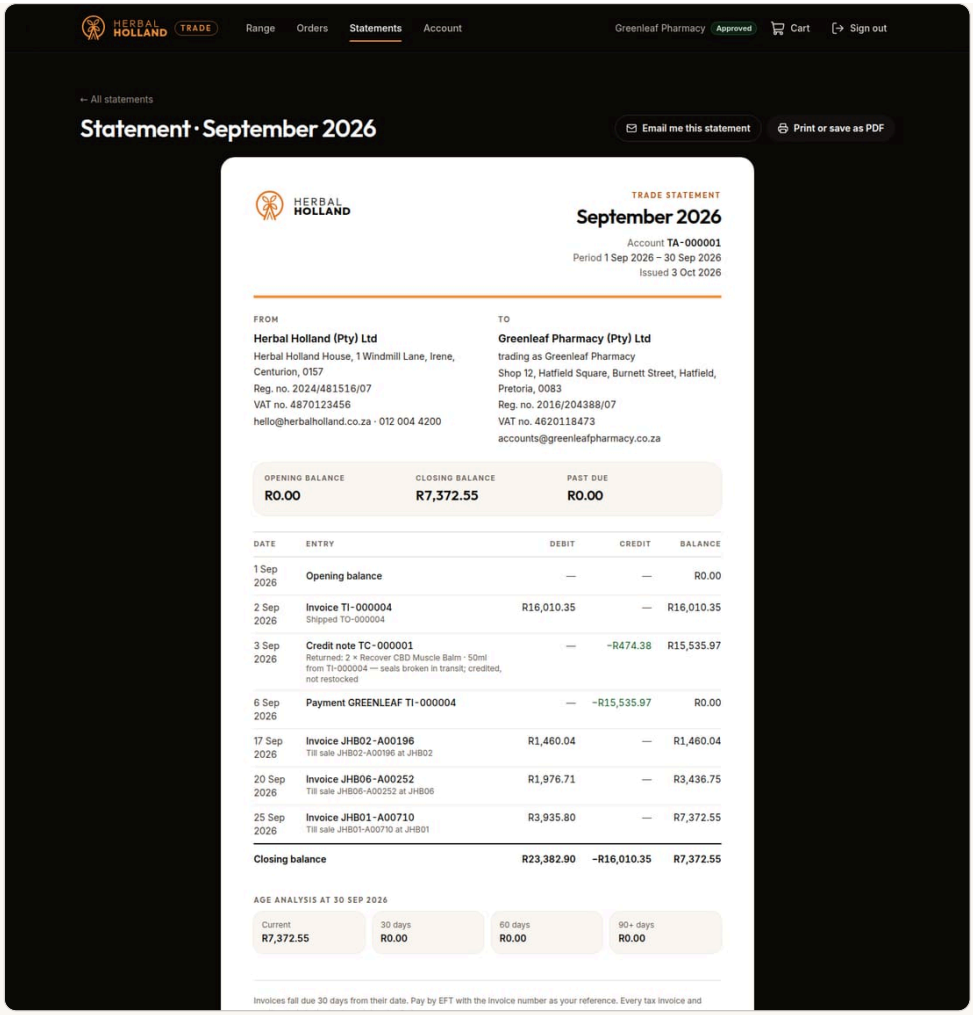

Figure 7.8 **A statement.** Opening balance, every invoice, payment and credit note with the running balance, the closing balance and the age analysis.

7.4 HQ: accounts

HQ › Trade opens with the queue: **Applications waiting**, **Open orders** ("3 to pick at the DC · 2 ready to collect"), **Awaiting EFT**, **Accounts on hold**, **Balance outstanding** with the number of open invoices, **Overdue** and **90+ days**, and the minimum order and fees; then cards for the applications (oldest first), the **Licences to check** (documents from applications and renewals, oldest first; *All accounts to check* when there are more), the **EFTs to confirm** (with the reference HH-TO-… to look for on the bank statement), **To pick at the DC** and the accounts on hold, and links to the two trade reports and the settings. The HQ team works it; an area manager sees the same pages for their region, view only.

Accounts lists every account under *All · Pending · Licences to check · Approved · On hold · Closed* with its number, type, terms, credit limit, **balance** (negative means in credit), orders and the day it applied; search by account number (however typed), name, VAT number or billing email; sort any column; saved views as elsewhere.

An **account's page** leads with its status badge, the legal name, kind, city, terms and VAT number; four figures (**Balance** with what is overdue, **Available credit** with the limit and days, **Open orders** and the **Last order**); and the ageing chips (Current · 30 days · 60 days · 90+ days, the overdue ones in red). Four tabs:

- **Overview**: the **Licences** card (above: verify, or not accepted with a reason), the **Terms** card (the same fields as approval; **Save terms**), the **Business details** that go on every tax invoice (**Save details**), the **Status** card (applied, terms accepted and when, adults confirmed, approved by whom, hold reason, price list, DC, ranges), and **Holds and closure**: **Put on hold** with a reason that goes in the email to the account, **Lift the hold**, and **Close account** (type CLOSE to confirm; the email says what is still due). **Place an order** at the top captures a phone or email order on the account's behalf, with the same whole-case rules, courier or collection, EFT or on account, and the same emails as a portal order.
- **Ledger & statements**: below.
- **Orders**: every order on the account, newest first.
- **Buyers**: who may order, their role and last sign-in; **Add a buyer** and **Remove**.

Every change is audited (`trade.account.approve`, `.update`, `.hold`, `.release`, `.close`, `trade.buyer.add` and `.remove`, `trade.licence.submit`, `.verify`, `.reject`, and `.file_view` for every look at a document) and every status change is emailed to the account's billing address. An approved account can't be moved to a kind of business or ranges whose licences it doesn't hold.

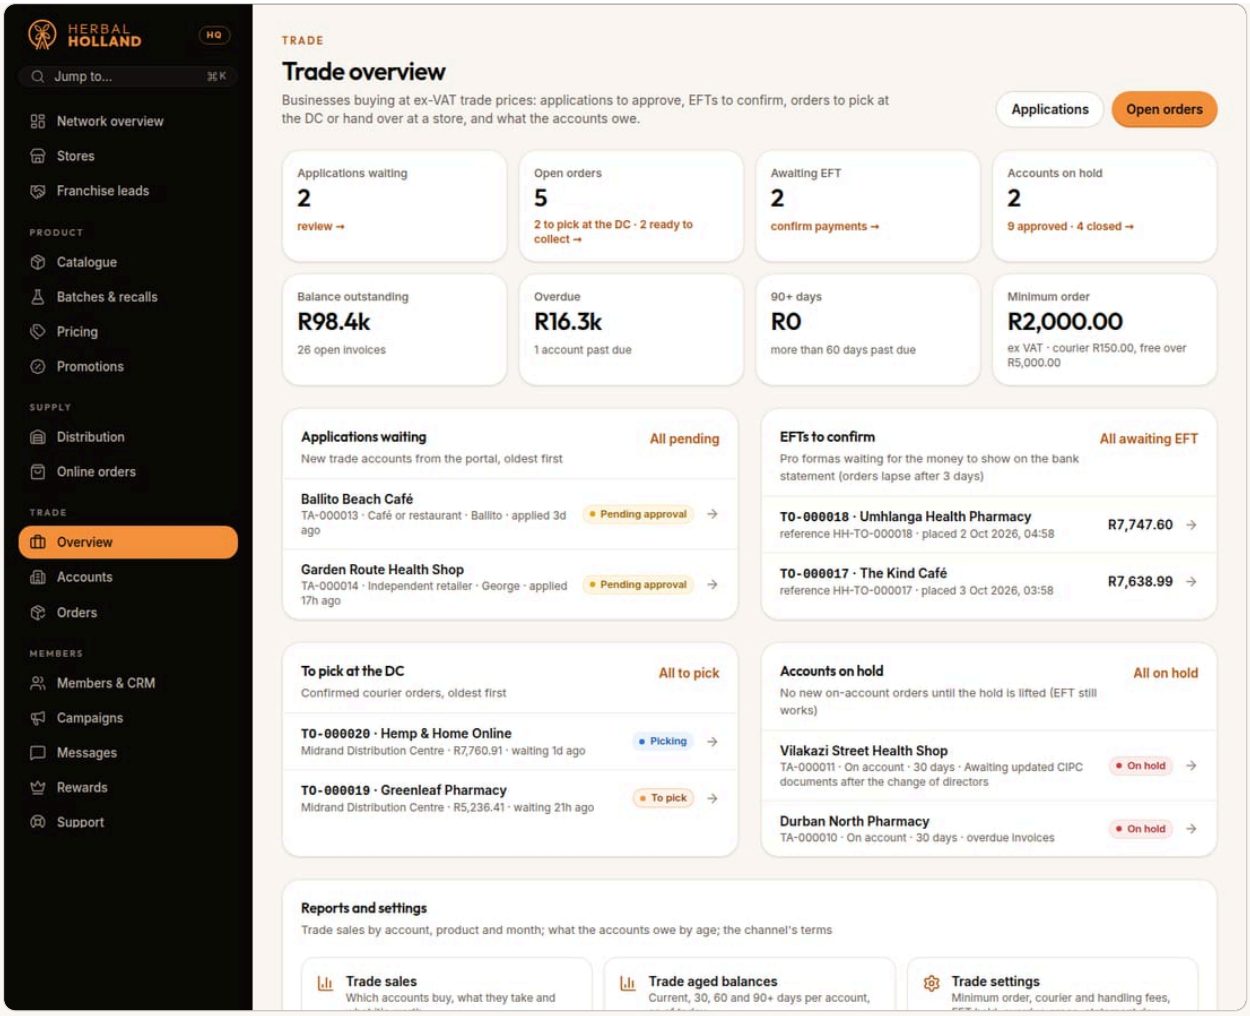

Figure 7.9 **HQ › Trade.** Applications waiting, open orders, EFTs to confirm, accounts on hold, the balance outstanding and what is overdue; the queues underneath.

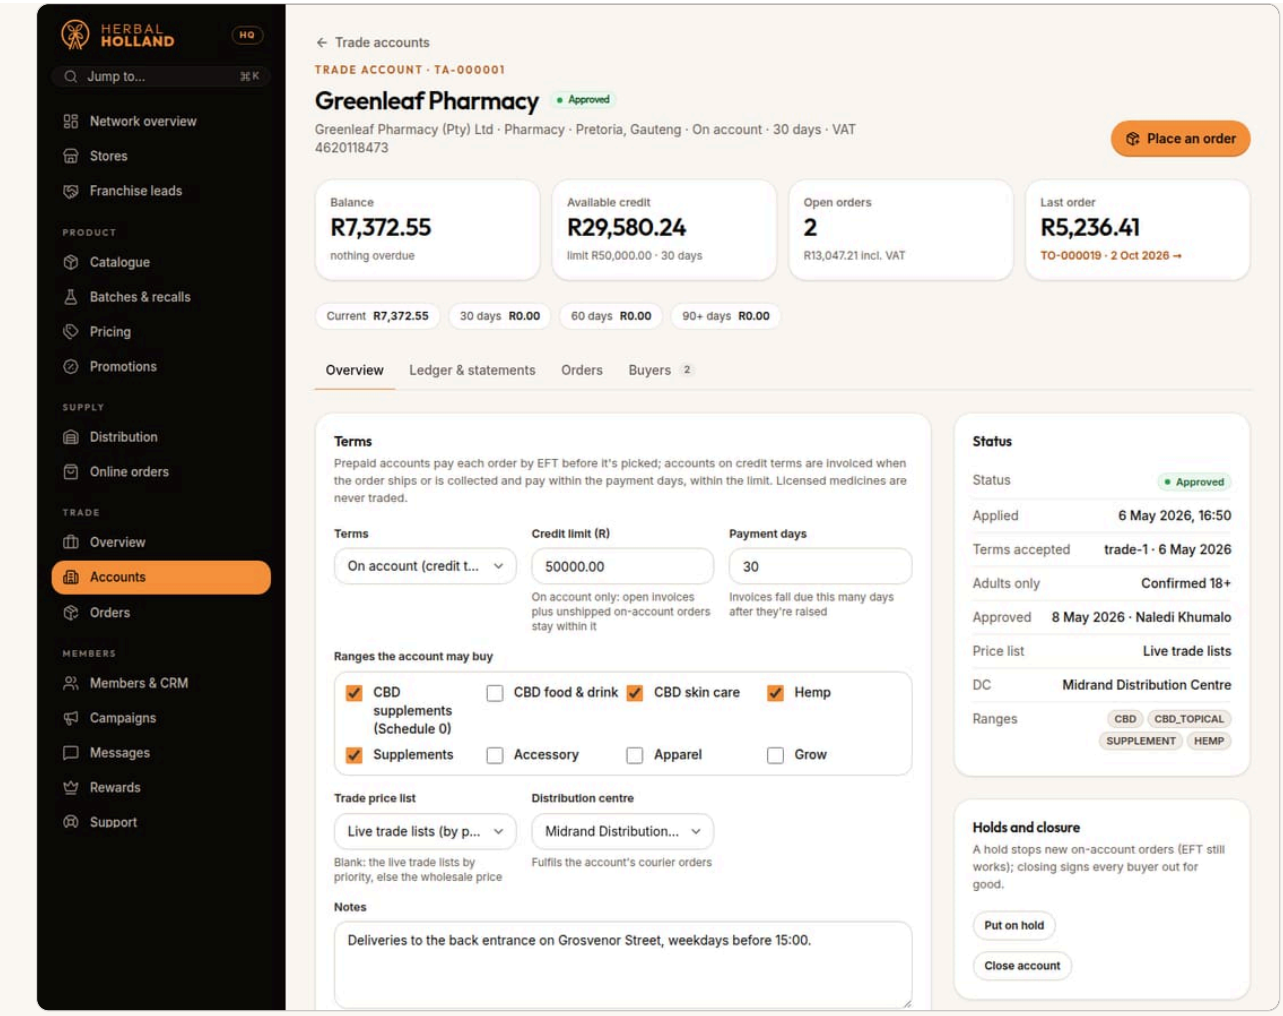

Figure 7.10 A trade account. Balance, available credit, open orders, ageing chips; the terms and business details; holds and closure.

7.5 HQ: the ledger (payments, credit notes, adjustments, statements and holds)

Each account has a **ledger**: **invoices** raise what it owes (an order that shipped or was collected; a till sale on account); **payments** and **credit notes** lower it; **adjustments** go either way, always with a note. The balance is simply the sum of the entries. Ageing is **FIFO on due dates**: a credit that names an order or a sale settles that invoice first (an EFT for its order, a credit note for its sale, a payment HQ recorded against an order); whatever is left, and every credit without a reference, is applied to the oldest due invoice first. The age analysis then buckets what is still open by how far past due it is (current, 1–30, 31–60 and more than 60 days, shown as "90+"), and an unapplied credit shows as negative current, so the total is always the balance.

The **Ledger & statements** tab has three forms and two tables:

- **Record a payment** (an EFT that showed on the bank statement): **Amount received (R)**, the **Bank reference**, **Received on** (blank: today), **Settles order** (optional: applied to that invoice first, else oldest first) and a note; **Record payment**. If the account was on hold for an overdue invoice and nothing is past due any more, the hold lifts and the account is emailed ("Hold lifted").
- **Credit note** (a return HQ agreed, or a price correction): the amount, an optional reference (else the next **TC-000123**) and **why**; **Issue credit note**. A refund of a trade sale at a till raises its own credit note, numbered as the refund (next section).
- **Adjustment**: an HQ correction, signed ("−150.00 reduces what the account owes"), with a note; **Post adjustment**.
- **Statement · September 2026**: pick a month for its opening and closing balances, what was overdue at month end, the month's lines with a running balance; **Email statement** sends it again by hand.
- **Ledger**: every entry newest first, with when, kind, the reference (the invoice number, the bank reference, the credit note number) with the order it belongs to and a link to the tax invoice, the due date, debit, credit and the balance after it.

> **OVERDUE HOLDS**
> The daily job puts an approved account on credit terms **on hold** when an invoice is still open more than the **overdue grace** (seven days by default) past its due date, after credits are applied FIFO. The reason is "overdue"; the email says what is past due on what balance ("Settle it and the hold lifts automatically"). The hold lifts itself the moment a payment, credit note or negative adjustment clears what is past due; a hold HQ placed by hand never does.

Statements go out **once a month** on the statement day (the 1st by default) for the previous month, to every approved or held account with anything on its ledger, once per account and month. The receipt is a row in HQ › Messages (kind `trade-statement`), so a rerun never sends a second copy. The email carries the opening balance, every line, the closing balance and the age analysis, and asks the account to pay by EFT with the invoice number as reference.

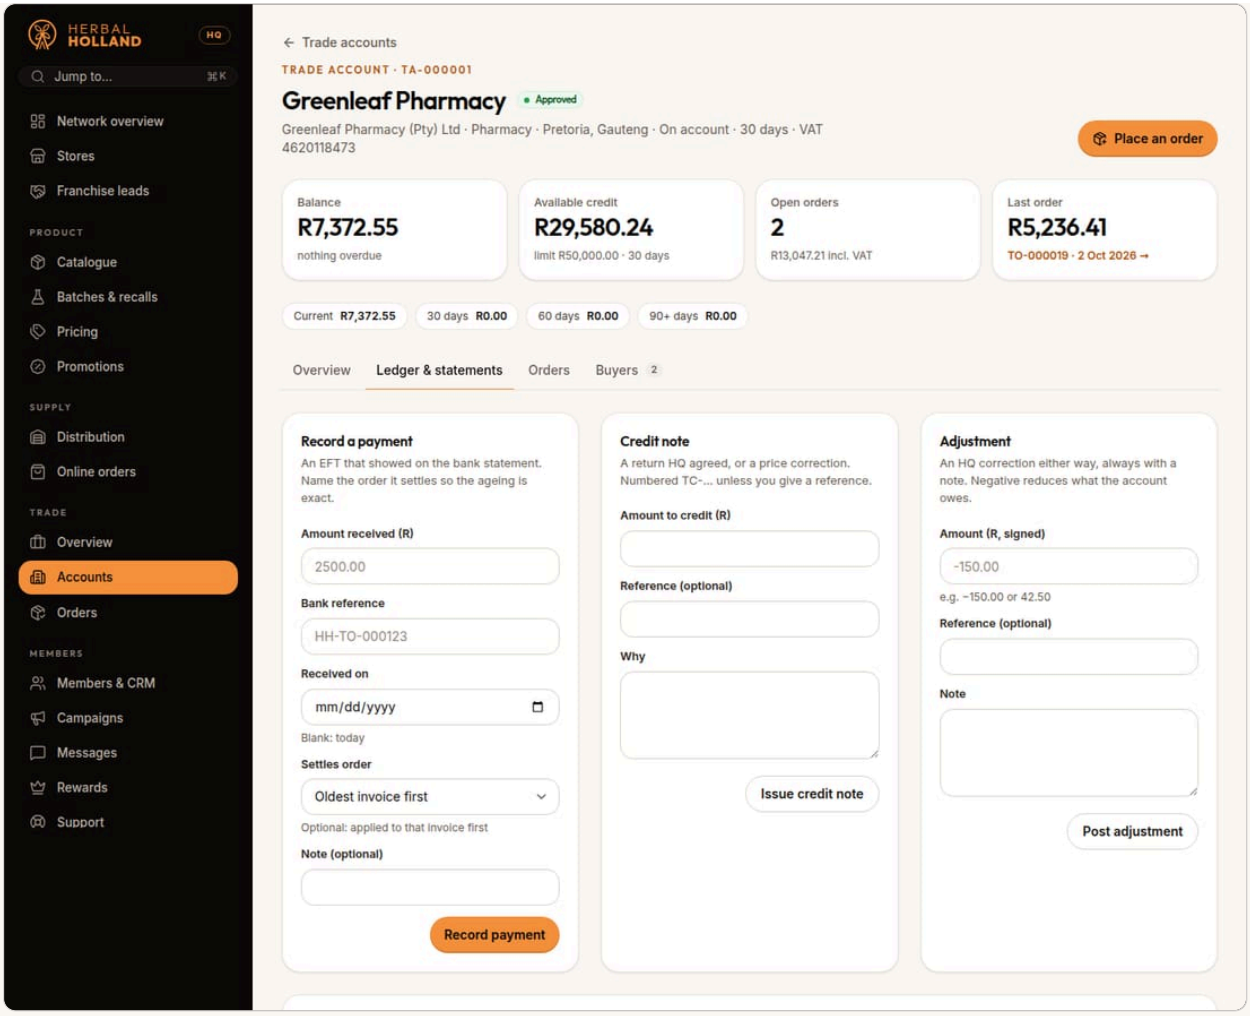

Figure 7.11 **Ledger & statements.** Record a payment, issue a credit note, post an adjustment; the month's statement; the ledger with due dates and the running balance.

7.6 HQ: orders (confirm the EFT, pick, ship, short-ship, cancel)

HQ › Trade › Orders lists orders from the portal and ones HQ placed for an account, under *Open · Pending EFT · To pick · Ready for collection · In transit (shipped in the last 7 days) · Done · Cancelled · All*; search by order number (TO-...), invoice number (TI-...) or the account's name or number. The work queues sort oldest first. An order is **Awaiting EFT**, **To pick**, **Picking**, **Ready to collect**, **Shipped**, **Collected** or **Cancelled**; the timeline on its page names each step (*Pro forma sent, awaiting EFT · Confirmed, stock reserved · Picking started · Packed and ready to collect · Shipped · Handed over · Cancelled*) with the time and any note.

1. **Confirm the EFT.** On an order awaiting EFT, the Payment card says what to look for: "When R3,220.00 shows on the bank statement with the reference HH-TO-000123". Enter the **Bank reference** and **Paid on** (blank: today) and tap **Confirm payment**: the order becomes **To pick**, the stock is reserved from now, the payment lands on the account's ledger, and the buyer gets "Order TO-000123 is confirmed". Confirming twice changes nothing. The payment is for the ordered total; if the order later ships short, the difference stays as credit on the ledger.
2. **Start picking** (optional; an order can ship straight from "To pick"). The order shows as **Picking**.
3. **Ship order**: the **Courier** and **Tracking number**, and, if a line cannot be filled in full, what was supplied of it (**Short-shipping?** Enter what was supplied; blank ships in full). An optional note goes to the account. **Ship and invoice** posts the sale at the DC: FEFO lots for what shipped, the **tax invoice TI-000123** as the sale's number, the **invoice** on the ledger (due after the payment days on account; due the same day for an EFT, so it nets against the payment), and emails "Order TO-000123 has shipped" with the courier, tracking and invoice, plus the tax invoice itself. A short line is invoiced for what went and shows "ordered 12, 6 supplied"; the order keeps its ordered total and shows **Invoiced (short supplied)** beside it.
4. **Cancel order** with a reason (the account is told) at any point before it ships or is collected. It releases the reservation; a cancelled order that was paid by EFT notes "refund ... by hand"; no money moves by itself.

A click & collect order is not shipped by HQ: its page shows "Click & collect at Hatfield" with a link to the **store's view**; the store picks it, marks it ready and hands it over (next section). Every step is audited (`trade.order` , `.paid` , `.picking` , `.ready` , `.shipped` , `.collected` , `.cancelled`).

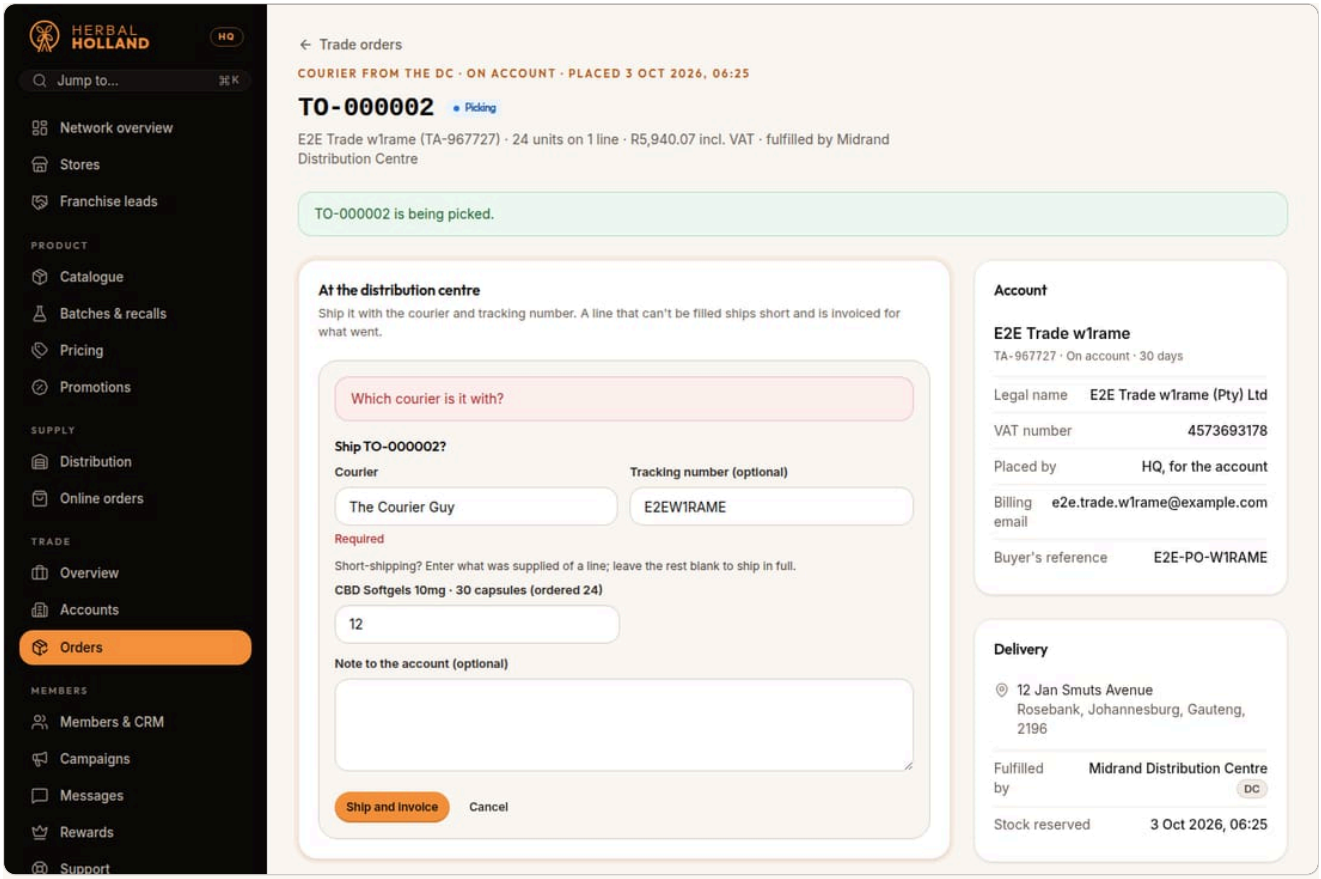

Figure 7.12 **Ship order.** Courier and tracking, a short-shipped line, the note to the account. Then "Ship and invoice" posts the sale, numbers the tax invoice and raises the invoice on the ledger.

7.7 The store: trade click & collect orders

When a trade account chooses click & collect at your store, the store's phones get the same push as a new online order ("New online order · Hatfield", then "TO-000123 · Greenleaf Pharmacy · R3,220.00 · click & collect (trade)"), and the order appears under **Store › Trade orders** (*To fulfil · Done · Cancelled*), oldest first while there is work to do, with its account, lines, total incl. VAT, payment (*On account* or *EFT (prepaid)*) and age (amber after four hours, red after a day). The money is never taken at the store: it was paid to HQ by EFT, or it is on the account's terms on HQ's ledger.

1. Open the order. Its page shows the items in units ("2 × case of 12 (24 units)") with what the shelf holds right now ("Not enough on hand to fill this order" names any line that is short), the account and buyer, the payment, the timeline, and the **collection code** in a dark card ("Never read it out to them").
2. **Start picking**, then **Packed and ready for collection**. The buyer gets "Order TO-000123 is ready" by email and a text with the code: "Trade order TO-000123 is ready at Herbal Holland Hatfield. Collection code 482913. Bring your ID (18+)."
3. When the driver or buyer arrives, **Hand over TO-000123**: tick **I've seen the collector's ID and they're 18 or older**, type the six-digit **collection code** they give you, tick **Something is short** and enter what you are handing over if a line is short, add a note if you like, and **Complete handover**.

Handing over posts the sale **at your store** in the trade channel (FEFO lots, the handling fee, the tax invoice TI-000123, the invoice on the account's ledger) and emails the buyer ("Order TO-000123 collected") with the tax invoice. The page then reads "Handed over: sale TI-000123 posted at Hatfield" and "R3,306.25 incl. VAT in the trade (wholesale) channel, collected by HQ." The till's **Orders** board shows the same orders tagged **Trade · TO-000123** ("Being packed in the back office" until they are ready) and can do the handover too, with the same code and ID tick and "nothing to take at the till". A manager or owner can **Cancel** a trade order with a reason; cashiers cannot.

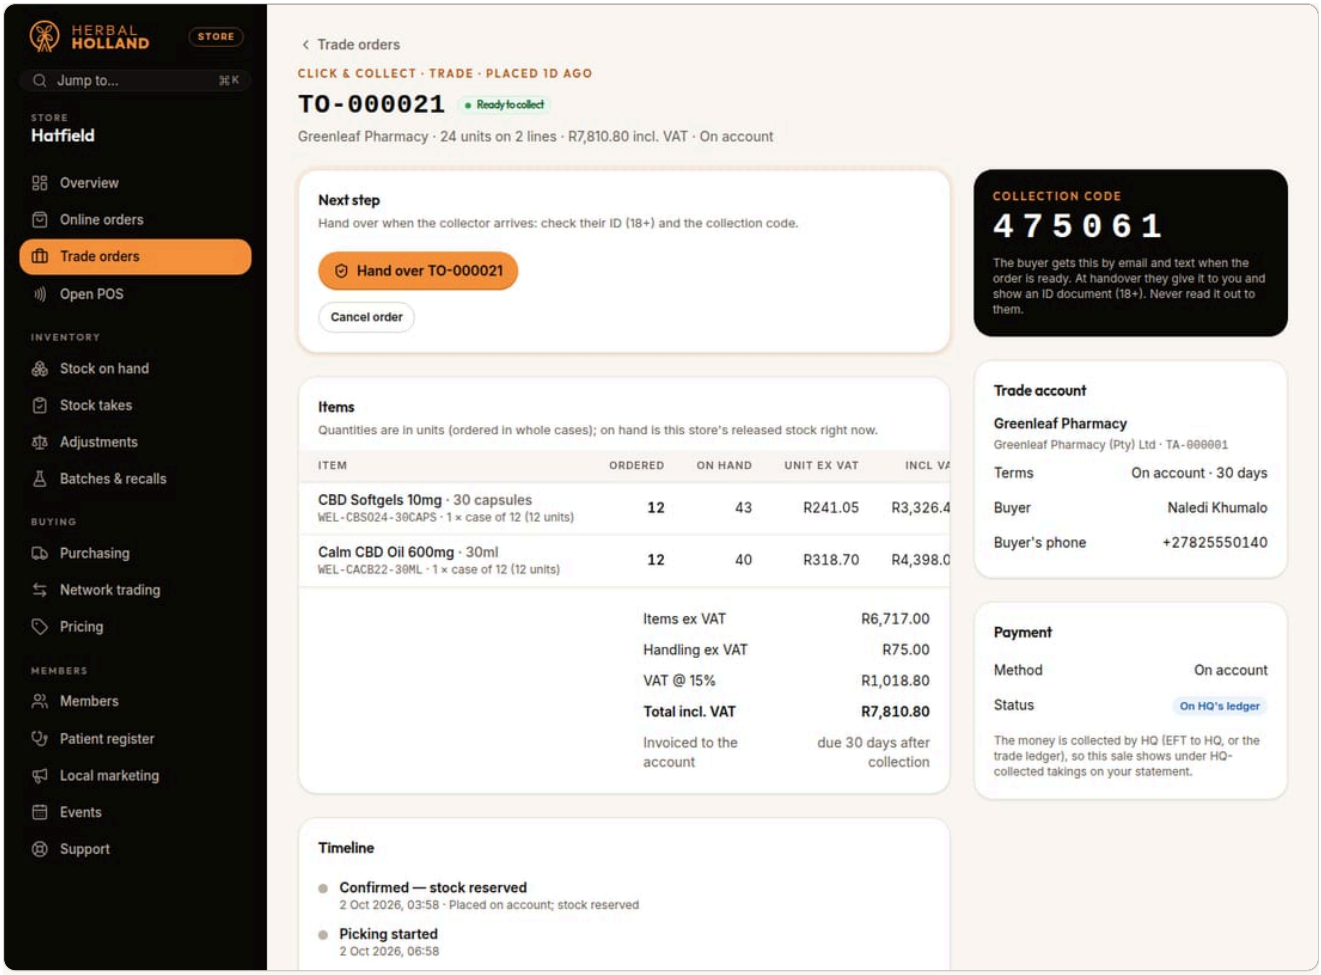

Figure 7.13 **Ready to collect.** The next step (Hand over), the items with on-hand at this store, the totals with the handling fee, the payment ("On HQ's ledger"), and the collection code card the store keeps to itself. The handover form asks for the ID tick, the code and any short quantities.

7.8 The till: trade-sale mode

A business can also buy over the counter at any till, at its trade prices, on a full tax invoice. On the sell screen tap **Trade sale** (beside the member button; it needs a connection, because the account, its prices and its credit terms live on the server, and a trade sale is never queued offline). The **Trade sale** sheet finds the account by trading or legal name, number (TA-..., however typed) or VAT number, and shows each hit's status, terms and what is available on account ("R18,400.00 available on account · owing R6,100.00"; "On hold: cash, card or EFT only"; "Prepaid: cash, card or EFT"). An account whose licences aren't in order shows a red **Licence** chip and can't be picked ("Can't sell to this account: ..."). Pick one and the basket goes into trade mode: a blue banner **Trade sale · Greenleaf Pharmacy** with the terms chip replaces the member card ("Leave trade mode" to go back).

- Lines are priced by the server at the account's trade prices: **R... ex VAT each**, the VAT per line, and **Total incl VAT**. No member, points, member prices, deals, drops, welcome gifts or gift vouchers; a line the account may not buy is blocked with the reason. Age-restricted items still need the counter's 18+ check.
- **Charge** offers **Cash**, **Card**, **EFT** (the buyer pays now: check the proof of payment and key in the bank reference) and **On account**: "Put R1,380.00 on Greenleaf Pharmacy's account (TA-000001): invoiced on the account's ledger, due in 30 days", enabled only while the amount stays within what the account may still put on account (the credit decision less what this sale has already put on it; the server checks again when the sale posts). Tenders can be split. Points and vouchers are off.
- The receipt is a **tax invoice**: the account's legal name, address and VAT number as the buyer block, unit prices ex VAT with the VAT per line, "On account - due 2 Nov 2026" for the on-account part, "Trade account TA-000001 - Greenleaf Pharmacy", and it is emailed to the account's billing address. The sale posts in the trade channel, with the on-account part as an **invoice** on the ledger (due after the payment days) and the rest as cash, card or EFT in the shift.
- **Refunds** work from Sales history as usual (a trade sale is tagged "Trade"). What was paid on account comes back onto the account as a **credit note** on the ledger (numbered as the refund, settling the original invoice first) before any money is paid out; only the cash or card part is refunded in money. Sales history says so: "Nothing to pay out: it all goes back onto the account as a credit note".

Trade sales count in the shift's cash-up like any sale (the cash part), in the Z-report, and in the store's takings; the dashboard shows "of which trade R..." so retail and trade are never confused.

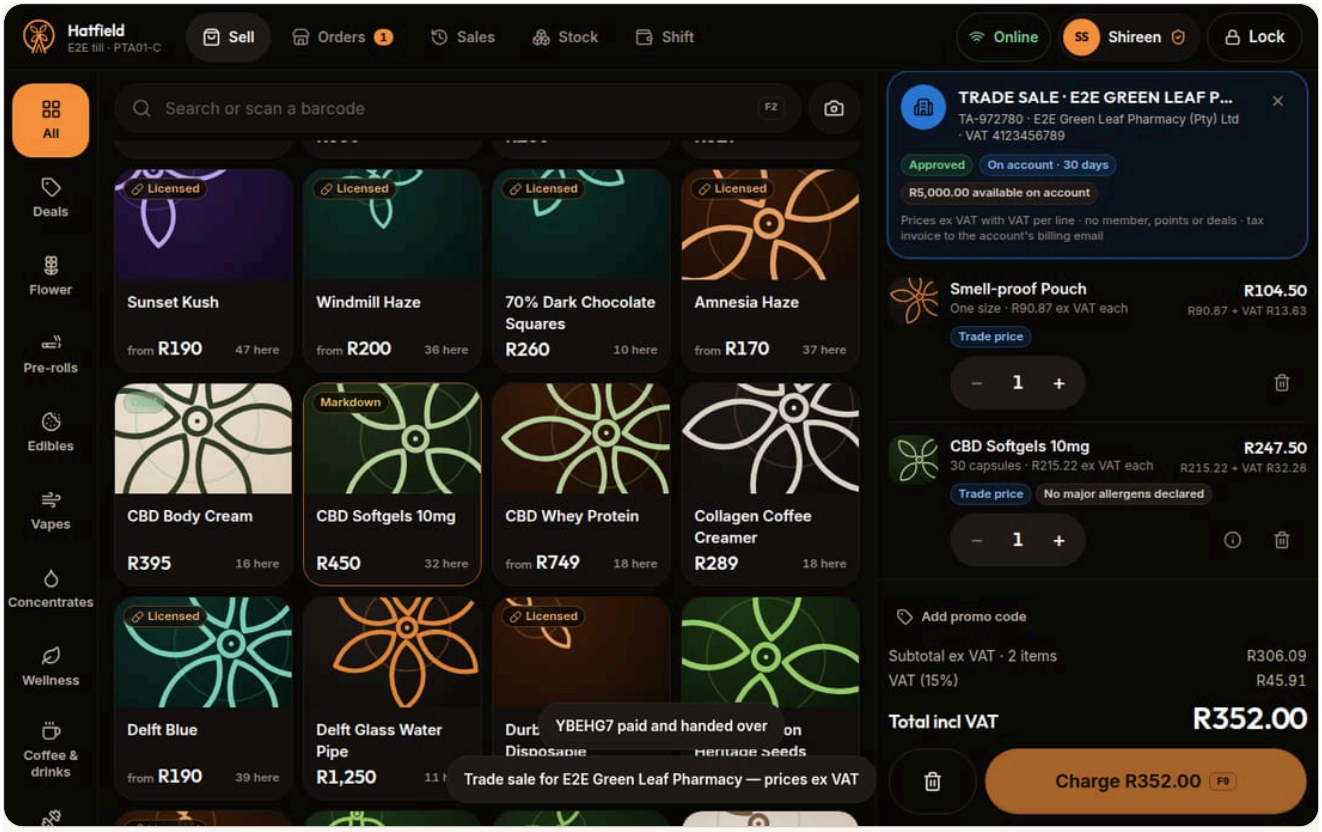

Figure 7.14 **Trade-sale mode.** The blue account banner, lines ex VAT with VAT per line, "Total incl VAT", and On account among the tenders.

7.9 Finance: how trade money flows

Every trade sale (an order the DC shipped, a collect order a store handed over, a sale rung up at a till) writes the same daily rollups as retail, under the **WHOLESALE** channel, so finance, the dashboards and the reports see it without reading raw sales. Where the money sits depends on how it was paid:

Trade sale	Paid by	Where the money is	On the store's statement
Order shipped from the DC	EFT to HQ, or on account	HQ's bank account, or HQ's trade ledger	The DC is HQ's own store: no franchise statement
Collect order handed over at a store	EFT to HQ, or on account	HQ collected it, and it rolls up with online payments ("collected by HQ")	Credited to the store as HQ-collected takings; royalty and levy on the net sale; no e-commerce commission
Till sale, cash or card	Money at the till	The store's cash-up and card settlement	Royalty and levy on the net sale, as any sale
Till sale, on account	The account's terms	HQ's trade ledger ("sales on account": invoiced, not yet money)	Credited to the store as HQ-collected; HQ carries the credit risk

So a store is paid for every trade sale it makes or hands over: the monthly franchise statement's **net sales** include trade (shown separately: "online R..., trade R..."), **royalty and the marketing levy** run on it at the store's rates, the e-commerce commission does not, and what HQ collected (EFTs, sales on account, collect orders) is **credited back** on the statement, which explains that HQ collected the money (online, by EFT, or on its trade ledger for sales on account, where HQ carries the credit risk) and credits it to the store as it does online sales. Points are never issued on trade, so nothing is reimbursed for them. The VAT working counts trade output VAT like any other; the P&L carries trade in its sales and margin; the store dashboard's **Takings today** and **Net sales** say "of which trade R...".

On HQ's side the **trade ledger** is the debtors' book: the balance outstanding and its ageing on HQ › Trade, the aged balances report below, and the statements. An EFT confirmed against a pro forma is money in HQ's account before the sale is posted; when the order ships, the invoice nets against it on the ledger (both due the same day), so a prepaid account's balance returns to zero, or to a small credit when a line shipped short.

7.10 Reports

Two reports under HQ › Reports (and from the trade overview); an area manager gets them for their region's stores, a store for its own trade sales:

- **Trade sales**: *By trade account* (account, number, type, orders, units, ex VAT, VAT, incl VAT, average order ex VAT and share of trade; terms, city, credit notes and last order in the CSV), with the top ten accounts charted; *By product* (what trade accounts take: units, average unit price ex VAT, ex VAT, VAT, incl VAT, and how many accounts buy it); and *By month*. The headline figures compare with the previous period and show trade's share of all sales.
- **Trade aged balances**: every account's balance split into current, 30, 60 and 90+ days past due as of today, after credits are applied FIFO, with the totals and how many accounts are past due.

Trade is also a channel on the sales reports and the finance pages wherever a channel can be chosen (in store · online · trade), and the Trade sales report shows its **share of net sales** across all channels. Downloads and schedules ("Email me this") work as for every report (chapter 6).

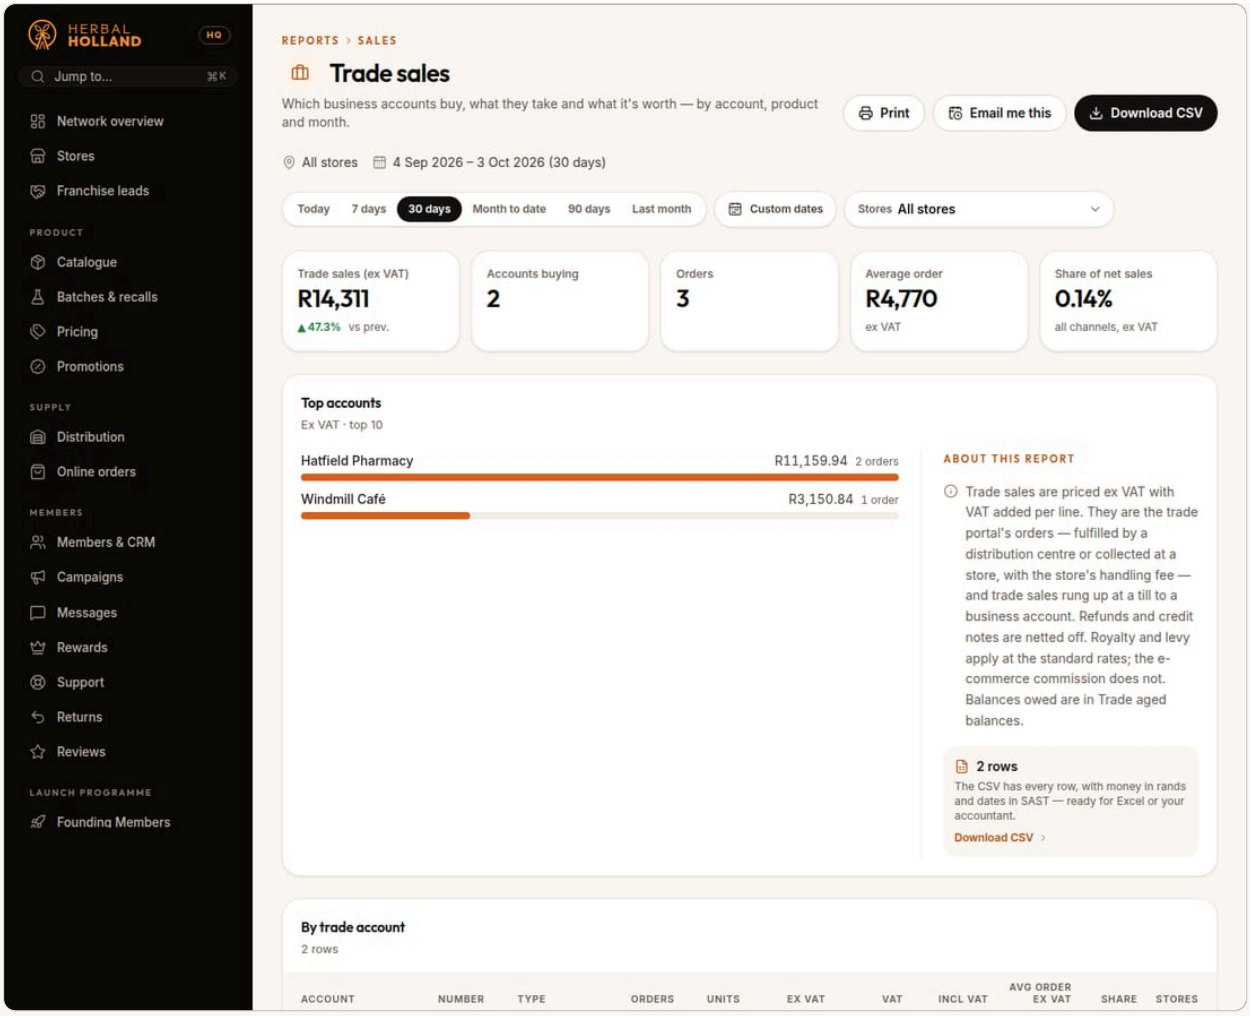

Figure 7.15 **Trade sales**, 30 days, all stores: by account with the top accounts charted, by product and by month.

7.11 Settings and jobs

HQ › Settings › Trade (wholesale) holds the channel's terms, all in rand ex VAT: **Minimum order** (R2,000, after any promotion), **Courier fee** (R150, flat, from the DC) and **Free courier over** (R5,000; 0 means never free), **Collect handling fee** (R75, the store's fee on click & collect), **EFT hold** (3 days; unpaid pro formas lapse after it), **Overdue grace** (7 days past due puts an account on hold), **Statement day** (the 1st), the **Terms version** stored on each account when it applies (`trade-1`), and the **bank details** printed on every pro forma (**Bank, Account name, Account number, Branch code**). "Fill these in before the first trade order": the overview says "bank details not set yet" until they are. **Save trade settings**; every change is audited. Trade price lists are made under HQ › Pricing with the kind *Trade*; items hold ex-VAT prices and a minimum quantity for each break.

The **daily job** (02:00 SAST) runs four trade tasks, each idempotent: **EFT expiry** cancels pro formas unpaid past the hold and tells the buyer; **overdue holds** puts accounts with an invoice past due beyond the grace on hold with the reason "overdue"; **licences** reminds an account once, 30 days before a required licence lapses (unless the renewal is already in), and puts an approved account whose required licence has lapsed on hold with the reason "licence" (emailed; verifying the renewal lifts it); and on the statement day, **statements** emails last month's statement to every approved or held account with ledger activity, once each. Every email the channel sends (the sign-in code, the application received, approved, on hold, hold lifted, closed, the pro forma, the order confirmed, ready, shipped, collected or cancelled, the tax invoice or credit note, the statement) starts its subject with "Herbal Holland Trade" and is in HQ › Messages; the ready-to-collect text is one SMS segment. New applications are announced at `TRADE_EMAIL` (else `FRANCHISE_EMAIL`).

Everything a trade buyer or HQ does is in the audit log under `trade.*`: the application and sign-ins, approvals and holds, orders and each step, payments, credit notes and adjustments, statements, and every trade sale at a till (`trade.sale`, with the account and what went on account).

> BEFORE GO-LIVE
> Have counsel sign off the trade terms (the page is marked as a draft) and the licence rules above (in particular the SARS registration as a sole proprietor's proof of business, and whether resellers of CBD supplements need more than registration); put the real bank account in the settings; decide which ranges pharmacies may be approved for; and appoint the trade team's address. Appendix D lists these with the other open decisions.

8

CHAPTER 8

herbalholland.com: the corporate site

A separate, static site on Cloudflare: the brand, the stores, press and careers. **No prices, no deals, no health claims**. Every "Shop online" leads to the early-access list until the shop opens, then to the shop.

IN THIS CHAPTER

8.1 What it is, and isn't

8.2 The pages

8.3 The early-access list

8.4 Franchise enquiries

8.5 Changing copy and facts, and releasing the site

8.1 What it is, and isn't

herbalholland.com is not part of the application. It is a set of static pages built from two files (the **words** in `sites/herbalholland.com/content.ts` and the **facts** in `facts.ts`), served by a Cloudflare Worker that also answers one small form, the early-access sign-up. It has no database of members, products or prices; it reads nothing from the platform.

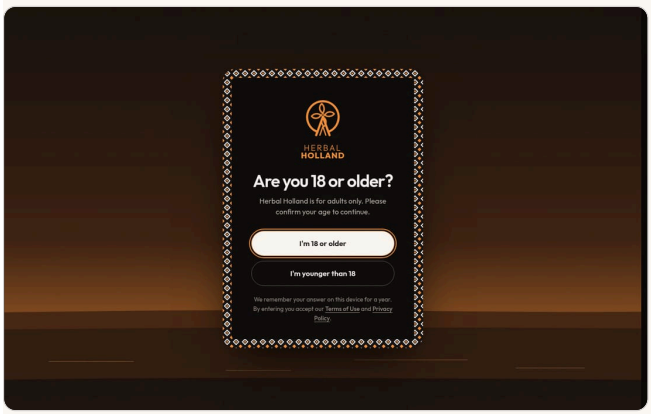

Figure 8.1 **The 18+ gate** is the first scene on every visit; the answer is remembered on the device for a year. Under-18s reach a page with SADAG and Childline links.

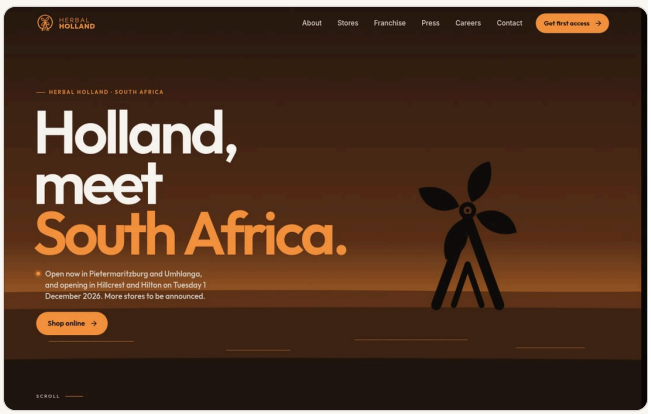

Figure 8.2 **Home, scene one.** "Holland, meet South Africa." with the live line built from the stores list: open now in Pietermaritzburg and Umhlanga, opening in Hillcrest and Hilton on 1 December 2026.

8.2 The pages

Figure 8.3 **Amsterdam to the hills.** A globe flies the great circle from Amsterdam to KwaZulu-Natal, counting the kilometres, with a pin for every store.

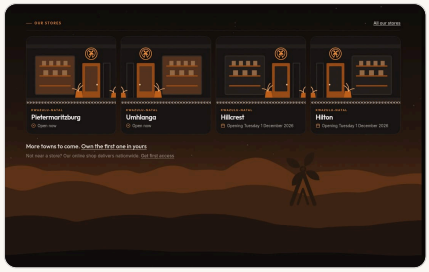

Figure 8.4 **Our stores.** Open now and opening, drawn until the owner supplies photographs.

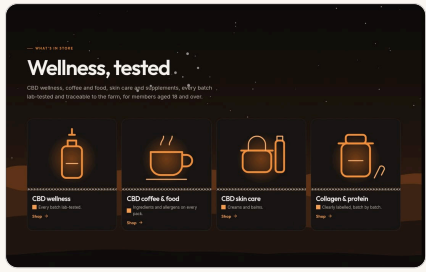

Figure 8.5 **What's in store.** Categories only (CBD wellness, CBD coffee & food, skin care, collagen & protein, accessories, apparel, grow), each with a "Shop" door.

Page	What it does
Home	One scrolling journey from a Dutch polder to the KwaZulu-Natal hills at night: the hero, the Amsterdam-to-the-hills globe, the new stores ("Holland, meet the Hills."), every store, the range as categories, five words ("Lab-tested · Batch-traceable · Members only · Adults 18+ · Good neighbours"), and Founding Members with the early-access sign-up. Counts, dates, towns and provinces are filled in from the stores list at build time.
About	Our story (the name, the windmill mark), our heritage (four landraces: Durban Poison, Swazi Gold, Malawi Gold, Mpondo Gold), and **Standards you can check**: every batch lab-tested with a public result; members only and ID every time; CBD within Schedule 0; licensed medicines through a pharmacist; good neighbours (nothing consumed on the premises, no poster sites within 500 m of a school, no sport sponsorship, never drive impaired).
Stores	Open now and each opening day's stores, a map of the provinces with a store (solid pin open, ring opening), and the store concept renders. Each store has its own page (`/stores/hillcrest`) with its town and status and, once the owner supplies them, the address, phone, hours and a photo; "Opening hours and directions" points to the shop's store finder.
Press	Press releases (each on its own page, published on its date; the site is rebuilt on or after that day), the fact sheet (company, what we are, range, stores and provinces, model, membership, Founding Members, age, quality, medicines, online shop, head office, media contact), the media contact, brand assets (the logo in Sunset orange and warm black, SVG and PNG, with clear-space rules), and notes for journalists (members, adults 18+, CBD is not medicine, licensed medicines aren't for sale to the public, no consumption imagery, "Herbal Holland, two words").
Careers	Why work here, the roles (member advisors and store managers, with the franchisee that owns the store; HQ teams, with Herbal Holland), how to apply by email, "We never charge to apply", and the POPIA note (applications kept 12 months).
Contact	The right inbox for each question (hello@, press@, careers@herbalholland.com); members are pointed to the shop; company details.
Privacy Policy (1.3)	How herbalholland.com handles personal information under POPIA, including what the early-access form keeps, the franchise enquiries received before that form closed, and how long each is kept. Last updated 7 October 2026.
Terms of Use (1.2)	The terms for using herbalholland.com, in plain English. Last updated 7 October 2026.
PAIA manual (1.2)	How to request the records held by Vantax (Pty) Ltd (the company that owns the online business) under the Promotion of Access to Information Act, and how personal information is handled; the Information Officer is Reshigan Govender. Linked from the shop's footer and Rewards settings; reviewed at least yearly.
404 and the under-18 page	A friendly not-found page; the under-18 page after the gate.

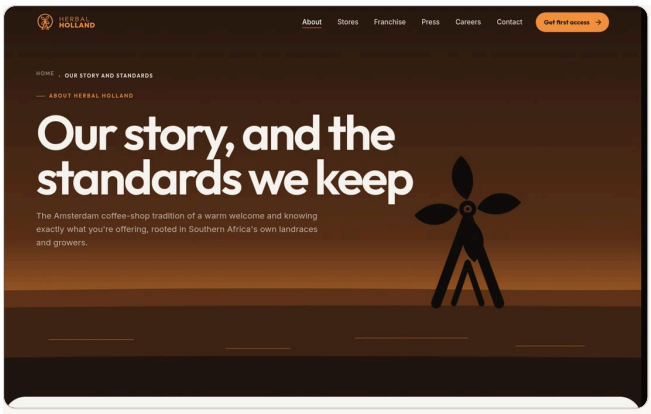

Figure 8.6 **About:** "Our story, and the standards we keep".

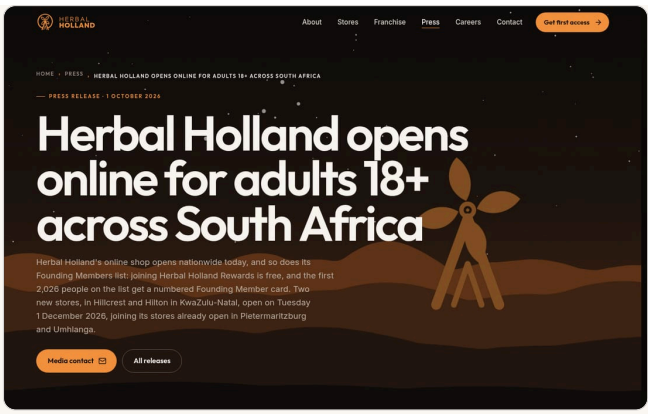

Figure 8.7 **A press release**, "Herbal Holland opens online for adults 18+ across South Africa": written, and held back (no date) until the online shop opens.

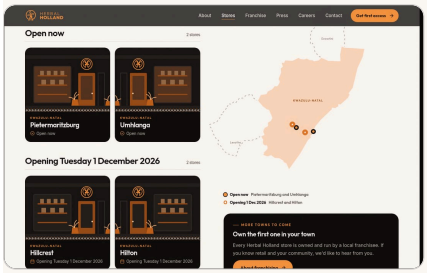

Figure 8.8 **Stores:** open now, opening 1 December 2026, and the KwaZulu-Natal map with a pin per store.

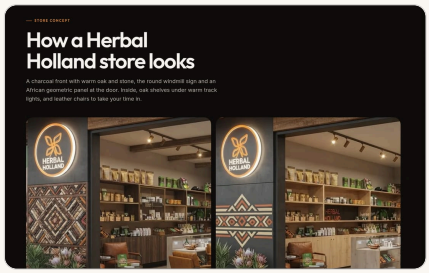

Figure 8.9 **Store concept:** a charcoal front with warm oak and stone, the round windmill sign and an African geometric panel.

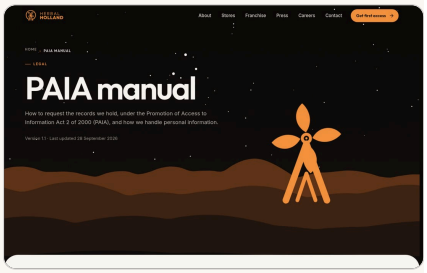

Figure 8.10 **PAIA manual**, version 1.1, last updated 28 September 2026.

8.3 The early-access list

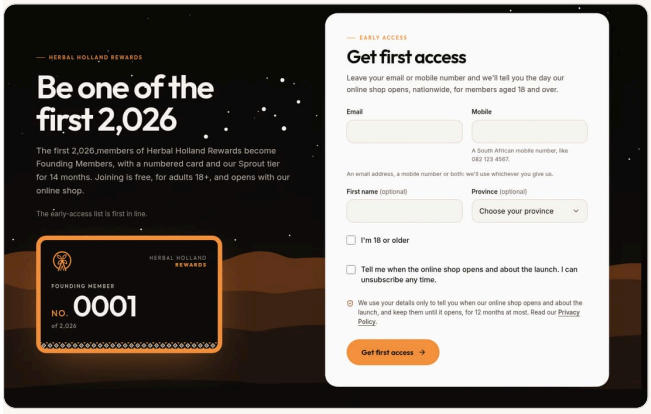

Figure 8.11 **Get first access.** Email and/or mobile, optional first name and province, "I'm 18 or older", and an *unticked* consent to hear about the launch, which is the POPIA basis for the launch messages.

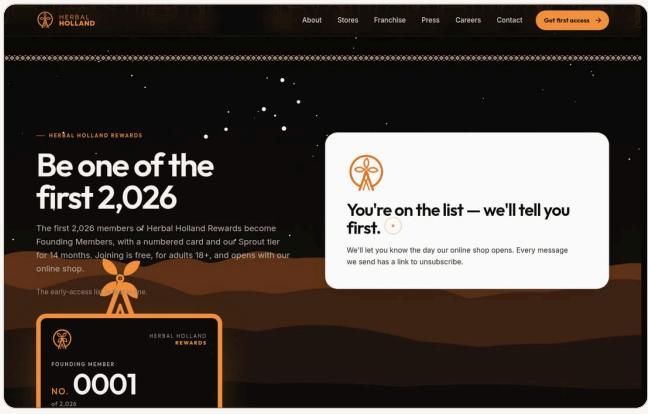

Figure 8.12 **Done.** "You're on the list. We'll tell you first." Every message will carry an unsubscribe link.

Until the shop opens, every "Shop online" and "Join Rewards" door leads to this form (on the home page's last scene and on Stores). It posts to the Worker, which keeps the sign-up in the site's own Cloudflare D1 database (`herbalholland-com-eu` , EU jurisdiction) with the version of the consent wording, refuses duplicates quietly, rate-limits repeat attempts, and **deletes every sign-up 12 months after it joined the list**. Nothing reaches the platform automatically: the day before the shop opens, HQ exports the list and pastes it into the Studio (chapter 11), which tells each person once on opening day, with an opt-out in every message, and deletes each sign-up as its message goes. Then the site's copy is deleted too.

8.4 Franchise enquiries

The site no longer takes franchise enquiries: there is no franchise page or enquiry form, and `herbalholland.com/franchise` redirects to the About page for good (a 301, so old links and search results still land somewhere useful). The enquiries already handed to HQ stay in **HQ › Franchise leads**. The Worker's daily job (02:15 SAST) still deletes the site's own copies a year after they arrived, or 30 days after HQ had them; only the HQ team reads them.

8.5 Changing copy and facts, and releasing the site

To change...	Edit
Any wording	`sites/herbalholland.com/content.ts` : one object per page (GATE, CHROME, HOME, ACCESS, MAP, STORES, ABOUT, PRESS, CAREERS, CONTACT, LEGAL, PRIVACY, TERMS, PAIA, NOT_FOUND). Every string passes the platform's copy screening in a unit test; a legal document's `version` and `updated` date change with its text.

To change...	Edit
A store, its opening day, address, hours or photo	`facts.ts` › `stores`: one line per store; the globe, map, /stores, the new-stores chapter and every count and date follow from it. Photos go in `static/stores`.
Whether the shop is live	`facts.ts` › `shop.url` (null until the shop opens, then the shop's address; joining links become `<shop>/club/join?src=site`, tagged for the join-sources report).
Company details, emails, the Information Officer, social profiles, the Founding Members cap	`facts.ts` › `company`, `email`, `officer`, `social`, `founding`.
A press release	`content.ts` › `PRESS.releases.items` with its date; it appears on and after that date, so rebuild and deploy then.

1. Build: `npx tsx sites/herbalholland.com/build.ts` › `dist/` (the build checks the published distances against the coordinates and every date).
2. Release, from `sites/herbalholland.com`: `npx wrangler@4 d1 migrations apply herbalholland-com-eu --remote && npx wrangler@4 deploy`.
3. For a change the owner should see first: `npx wrangler@4 versions upload --preview-alias preview` gives a preview address (same database as live, so don't send test sign-ups), then `npx wrangler@4 versions deploy <version-id>` makes that exact version live.

Already set up in Cloudflare: the Worker's custom domain, www › herbalholland.com, Always Use HTTPS, TLS 1.2+, HSTS, and Email Routing for hello@, franchise@, press@ and careers@.

9

CHAPTER 9

Payments and integrations

Online payments through **Peach Payments** (chosen; Yoco kept; simulated in demo), **Yoco card machines** in store, SMS, email and app push, wallet passes for the Rewards card, ID checks, couriers, accounting, file storage, the merch partner and social posting, and every environment variable by name.

IN THIS CHAPTER

9.1 Online payments: Peach Payments, Yoco and the simulator

9.2 In-store cards: Yoco machines, tap on glass, bank terminals

9.3 SMS, email, app notifications and WhatsApp

9.4 ID verification, couriers, accounting and file storage

9.5 Documents: tax invoices, statements and Z-reports on paper and by email

9.6 Environment variables (names only)

9.1 Online payments: Peach Payments, Yoco and the simulator

`ONLINE_GATEWAY` picks the gateway for the shop: `SIMULATED` (the default: a demo pay page where no money moves), `PEACH` (Peach Payments, the owner's choice) or `YOCO` (built and working, but Yoco's policy bans CBD). Either way there is one merchant for the online shop, **Vantax (Pty) Ltd**, whose name the pay page shows; the sale itself posts at the fulfilling store or DC on handover or dispatch, with an *online* tender carrying the gateway's reference.

1. Checkout places the order as *awaiting payment* and reserves the stock for the payment window (60 minutes by default), then sends the member to the pay page.
2. The pay page creates the payment (Peach: our own payment id, so a double click opens one payment, not two; Yoco: the order id as the idempotency key) and sends the browser to the gateway's **hosted page**. We never see card details.
3. The member comes back to the order page. The return is only a hint: *Waiting for payment confirmation…*, *Payment cancelled* with **Try again**, or *The payment didn't go through*.
4. The gateway's **webhook** (`/api/payments/peach` or `/api/payments/yoco`) is verified by signature; a payment that matches the order's checkout and amount marks it paid (once, however often it is redelivered) and the member is texted. Anything that doesn't fit (another amount, another checkout, paid after the order was cancelled) is never marked paid: it is logged as `payment.review` for a person to sort out.
5. Cancelling a paid order (back office, till or HQ) **refunds it in full first**; if the gateway refuses, the order isn't cancelled and staff see why. A refund that later fails puts the order back to paid with a note to refund by hand.

> **ACCEPTABLE USE: WRITTEN APPROVAL BEFORE LIVE PAYMENTS**
> Peach lists CBD, drug stores and pharmacies as restricted (prior written approval) and doesn't permit cannabis dispensaries; Yoco's prohibited list names cannabis and CBD. Describe the business honestly (a SAHPRA-licensed medical dispensary plus CBD/wellness retail; licensed THC is collect-only and paid in store, never couriered) and get written approval for each account before taking live payments. The app enforces the part it can: **a basket with licensed products can never be paid online.** Peach's approval was still pending when this guide was written (appendix D).

	Peach Payments (Orchestration, hosted checkout)	Yoco (Checkout API)	Simulated
Pay page says	"Card and more, secured by Peach Payments"	"Card or Instant EFT, secured by Yoco"	"Card, Instant EFT or PayShap" (demo; no money moves)
Refundable methods	Cards, Apple/Google/Samsung Pay, PayShap, Payflex, Float, Happy Pay, Mobicred, RCS, 1Voucher, MoneyBadger. **Not** Peach EFT, Capitec Pay, ZeroPay: leave them off, or an order paid that way can't be cancelled in the app	Cards, Instant EFT; test payments can't be refunded	—
Minimum	—	R2.00	—
Settings	`PEACH_ENV` (test/live), `PEACH_API_KEY`, `PEACH_PROFILE_ID`, `PEACH_PAYMENT_RESPONSE_HASH_KEY`	`YOCO_SECRET_KEY`, `YOCO_WEBHOOK_SECRET`	none
Daily reconciliation	Merchant reference = order code; payment id = the order's payment reference (Dashboard › Reporting)	externalId = order code; checkout id = payment reference	—

The go-live procedures (sandbox, hash key, webhook, the Cloudflare rule that lets webhooks through, the live smoke test) are in the runbook and summarised in chapter 11.

9.2 In-store cards: Yoco machines, tap on glass, bank terminals

`NEXT_PUBLIC_TAP_PROVIDER` decides the till's card tender for the whole network (set in the app's runtime environment, never at image build; each till picks it up on its next refresh and shows it under Shift › This till › Card payments):

Value	The till offers	Status
`SIMULATED`	Card · tap: the full tap-on-glass flow, approves after a short animation; "Simulate a decline" for training	Default; demos and training
`YOCO`	Card · Yoco: charge the store's own Yoco machine, key in its reference (and optionally the last 4). Works offline. Each store is merchant of record on its own Yoco account	**Chosen** for stores; built
`HALO_APPLINK`	Card · tap through Halo Dot Halo.Link (PCI MPoC-certified SoftPOS): the server creates a session with the store's merchant id and the till hands over to the Halo app. Android 11+, Google services, no developer options; needs a connection	Adapter kept (`HALO_API_URL`, `HALO_API_KEY`)
`EXTERNAL`	Bank terminal: any device the owner already has; the till records the approval code	Built (also available alongside the others)

PayShap (to the store's own ShapID, with the bank reference), cash and points need no provider. A Yoco Payment SDK till app that drives the machine itself is planned but not built.

9.3 SMS, email, app notifications and WhatsApp

Channel	Used for	Provider
SMS	Sign-in codes, order updates, drop alerts, recall notices, campaigns (consented)	`MESSAGING_PROVIDER=smsportal` (SMSPortal REST, up to 500 per call; optional sender id); `log` only records messages. Codes end with `@host #code` so phones autofill them; a failed code send tells the member to retry
Email	Tax invoices, statements, Z-reports, DC invoices, campaigns; a signed one-click unsubscribe link and List-Unsubscribe headers on marketing	`SMTP_URL`, `EMAIL_FROM` (an SA-region service such as Amazon SES af-south-1)
App notifications	Drop alerts and campaigns to members who switched them on in the Rewards app	Web Push with VAPID keys (`WEB_PUSH_PUBLIC_KEY`, `WEB_PUSH_PRIVATE_KEY`, `WEB_PUSH_SUBJECT`); rotated subscriptions renew themselves; iPhones need the app on the home screen
WhatsApp	Utility messages only, if ever	No provider: Meta's commerce policy bans drug and medical products. With a live SMS provider, WhatsApp messages are logged as failed rather than silently dropped

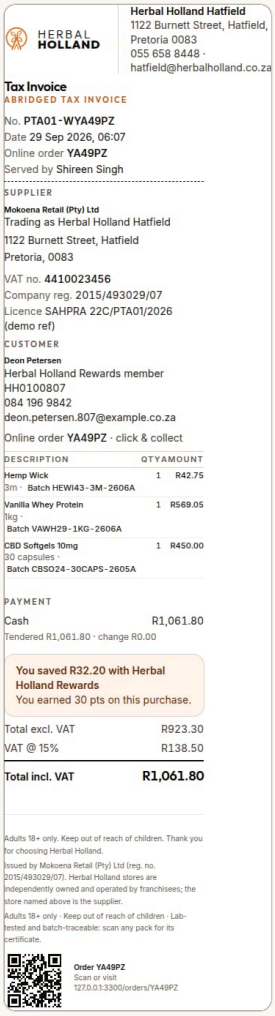

Every message is written to the message log with its status (sent, failed and why); sign-in codes are masked in the log. Without providers configured (the demo), messages are only logged.

Every email uses one designed layout: the cream page, a white card with the mark and wordmark, an orange pill button, tabular figures, and a footer whose legal line comes from the franchisor's company record; every email has a plain-text twin, and only campaign emails carry the unsubscribe link and `List-Unsubscribe` headers. Texts follow one set of rules too: "Herbal Holland:" first, the order code next, one GSM-7 segment where possible (curly quotes and dashes are tidied, so a text never silently doubles in cost), links as the app's address without the scheme, and "Reply STOP" on marketing only. Everything sent, or logged instead of sent, is in HQ › Messages (chapter 6).

9.4 ID verification, couriers, accounting and file storage

ID checks	Local checks are built in: the SA ID number's format, checksum and date of birth, 18+. A live check against Home Affairs (VerifyNow, with Smile ID as fallback) is recommended but not integrated; when it is, the result is recorded as *Verified* on the member. The till doesn't read the Smart ID card's barcode: staff type the ID number or tick *ID sighted*.
Couriers	No courier API is integrated. Dispatch records the courier and tracking number by hand (the till suggests Herbal Holland driver, The Courier Guy, Pargo, Bob Go, other). Recommended: Bob Go as aggregator, The Courier Guy direct as backup, Pargo pickup points (ID and code on collection). Couriers ban medicines and several ban CBD, which is why licensed products stay on click & collect and own-fleet same-day delivery.
Accounting	The books are kept in the platform itself (chapter 12). There is no link to outside accounting software such as Sage or Xero; an accountant who needs one works from the books' reports and CSV downloads.
File storage	Banking slips (and, in future, authorisation scans) go to Cloudflare R2 or any S3-compatible bucket (`S3_ENDPOINT`, `S3_BUCKET`, `S3_ACCESS_KEY_ID`, `S3_SECRET_ACCESS_KEY`, `S3_REGION`), or to disk under `UPLOAD_DIR` when no bucket is set. Files are always served through the app, auth-checked and audited. R2 has no South African location, so the EU jurisdiction is used, and the cross-border transfer belongs in the POPIA register.
Merch	The whole range (embroidered tee, hoodie, crewneck, cap, bucket hat and beanie; printed tote) is held in stock and sold like everything else: delivered, or collected in store. A variant given a merch partner code is made to order instead, couriered white-label by the partner. No API: a paid order with one is emailed to the partner as a production order (`POD_EMAIL`, `POD_PARTNER_NAME`) by the 15-minute job with links to the print files; the partner emails back the tracking, which the DC enters on the order (*Merch shipped*).
Social	Postiz (open source, self-hosted or cloud) publishes to Instagram, Facebook, Threads, Bluesky, Telegram and LinkedIn (`POSTIZ_URL`, `POSTIZ_API_KEY`); the Studio uploads its cards with each post, and the Social page's pictures are fetched from the app, so `APP_URL` must be public for those.
AI drafting	Optional: Cloudflare Workers AI rewrites Studio posts in the brand's voice within its free daily allowance (`WORKERS_AI_ACCOUNT_ID`, `WORKERS_AI_TOKEN`); it never sees a member's details.
Wallet passes	The Rewards card as an Apple Wallet pass (`/club/wallet/apple.pkpass`: pass, manifest and a PKCS#7 signature, zipped) and as a Google Wallet pass (`/club/wallet/google`: a signed "Save to Google Wallet" link). Both carry the member number as the till's QR code, the tier, the points and the first name, nothing else personal; both need their keys (`WALLET_APPLE_*`, `WALLET_GOOGLE_*`) or the buttons stay hidden.
Scheduler	Something must call four endpoints with `Authorization: Bearer $CRON_SECRET`, from the server itself and not through Cloudflare: `POST /api/cron/frequent` every 15 minutes, `POST /api/cron/staff-push` every 5 minutes (staff phone notifications), `POST /api/cron/daily` at 02:00 SAST, and `POST /api/cron/operations` at 03:00 SAST (expiring lots, cash due at the bank, the low-stock digest, scheduled report exports, pruning). Chapter 11 lists what each job does. A doubled run does nothing twice; a failing step is reported and the others still run; a missed night is made up by the next one for the past week (older gaps: `scripts/ledger-backfill.ts`). `/api/health/jobs` answers 503 when a job hasn't succeeded in time.
Health	`GET /api/health` for the load balancer.

9.5 Documents: tax invoices, statements and Z-reports on paper and by email

Figure 9.3 A Z-report slip from the receipt printer: sales, VAT, discounts and savings, tenders, points, the cash drawer with its variance, licensed dispensing, and the signature lines.

Every document the platform issues is designed once and follows the paper: on a receipt printer it prints as a slip, on A4 as a sheet, and from any page as a PDF through the print dialog's "Save as PDF".

- **Tax invoices**: every sale, emailed (abridged up to R5,000, full above) with a signed link to the hosted copy (`/invoice/<id>?t=…`, also under Rewards › Invoices): batch numbers per line, VAT per rate, the payment and its reference, and a QR code back to the order. Print on A4, save as a PDF, or print on till paper with **Print receipt**; a walk-in can have it emailed from the till. Failed sends are retried for three days.
- **Franchise statements**: Store › Money › Franchise statement and HQ › Statements show the month as a document: the parties, credits and debits netted to one amount, how the fees were worked out. Print or save as PDF from the page; **Email to owner** sends it to the owner company's statement address. Under it, HQ records each **payment** as it arrives, and both companies' books follow (chapter 12).
- **Z-reports**: printed at the till on shift close (80 mm) and emailed to the store; the same report under Store › Money › Cash-ups › the shift, printable on A4 or as a PDF.
- **The menu board**: the in-store TV page, in landscape or portrait, described with the till (chapter 4).

9.6 Environment variables (names only)

Variable	Purpose
`DATABASE_URL`, `DATABASE_POOL_MAX`	PostgreSQL connection; connections per app instance (default 10)
`SESSION_SECRET`	32+ random bytes; signs invoice links, hashes ID numbers
`APP_URL`	The shop's public https address (links in messages, payment returns, social pictures)
`DEMO_MODE`	`true` enables demo logins, pairing and on-screen codes; **it must be false in production**
`CRON_SECRET`	Protects `/api/cron/*` (32+ random characters)
`SITE_ENQUIRY_SECRET`, `FRANCHISE_EMAIL`	Shared with the herbalholland.com Worker so franchise enquiries land in HQ; where new enquiries are emailed
`ALERT_EMAIL`	Ops inbox for server errors and failed scheduled jobs (throttled)
`SUPPORT_EMAIL`, `TRADE_EMAIL`	Member support's address; where trade applications and licences to check go (else `FRANCHISE_EMAIL`)
`CONTENT_REVIEWER`, `ORG_SAME_AS`	"Name|Job title|Registration" shown as "Reviewed by" on Learn guides (unset = none); official profile URLs for search engines
`SMTP_URL`, `EMAIL_FROM`	Email

Variable	Purpose
`MESSAGING_PROVIDER`, `SMSPORTAL_CLIENT_ID`, `SMSPORTAL_API_SECRET`, `SMS_SENDER_ID`, `TRANSACTIONAL_CHANNEL`, `OTP_SMS_HOURLY_MAX`	SMS (and the transactional channel); the network's hourly ceiling on sign-in codes by SMS
`WEB_PUSH_PUBLIC_KEY`, `WEB_PUSH_PRIVATE_KEY`, `WEB_PUSH_SUBJECT`	Rewards app notifications and staff phone notifications (VAPID)
`WALLET_APPLE_PASS_TYPE_ID`, `WALLET_APPLE_TEAM_ID`, `WALLET_APPLE_CERT_PEM`, `WALLET_APPLE_KEY_PEM`, `WALLET_APPLE_WWDR_PEM`	Apple Wallet pass for the Rewards card: all five, or the button stays hidden
`WALLET_GOOGLE_ISSUER_ID`, `WALLET_GOOGLE_SERVICE_ACCOUNT_JSON`	Google Wallet pass for the Rewards card: both, or the button stays hidden
`NEXT_PUBLIC_TAP_PROVIDER`, `HALO_API_URL`, `HALO_API_KEY`, `HALO_MERCHANT_ID`	The till's card tender; Halo Dot (a store's own `HALO_MERCHANT_ID_<STORECODE>` wins)
`ONLINE_GATEWAY`	`SIMULATED` | `PEACH` | `YOCO`
`PEACH_ENV`, `PEACH_API_KEY`, `PEACH_PROFILE_ID`, `PEACH_PAYMENT_RESPONSE_HASH_KEY`	Peach Payments (change the four together)
`YOCO_SECRET_KEY`, `YOCO_WEBHOOK_SECRET`	Yoco Checkout API (change the two together)
`POD_EMAIL`, `POD_PARTNER_NAME`	Merch partner's order inbox and name (only for a variant made to order)
`POSTIZ_URL`, `POSTIZ_API_KEY`	Social posting
`WORKERS_AI_ACCOUNT_ID`, `WORKERS_AI_TOKEN`	Studio rewrites in the brand's voice (optional)
`S3_ENDPOINT`, `S3_BUCKET`, `S3_ACCESS_KEY_ID`, `S3_SECRET_ACCESS_KEY`, `S3_REGION`, `UPLOAD_DIR`	File storage: a bucket, else disk (back it up)

The Worker for herbalholland.com has its own: `APP_ENQUIRY_URL`, `APP_ENQUIRY_SECRET`, `NOTIFY_TO`, `IP_SALT` (secrets), `NOTIFY_FROM` (in `wrangler.jsonc`).

10

CHAPTER 10

Compliance built in

The South African rules the software enforces, written for a manager, with the law named. The rules are **data** (HQ › Compliance), evaluated on the server for every sale and order, so nothing in a screen can bypass them.

IN THIS CHAPTER

10.1 Product classes, and what each may do

10.2 THC in medical mode, and the adult-use switch

10.3 No incentives on medicines (Medicines Act s18A)

10.4 Adults only: age gates and ID checks

10.5 Members only, and the membership terms (CPA, ECTA)

10.6 Personal information (POPIA) and marketing consent

10.7 Direct marketing windows and the opt-out registry (CPA)

10.8 Copy screening: advertising, claims and social

10.9 Batches, recalls, destruction and invoices

10.10 Gift vouchers and reorder reminders

10.11 Retention and PAIA

NOT LEGAL ADVICE

This chapter describes what the platform does. Counsel signs off the settings, the membership terms, the policies and the claims library before launch and whenever the law moves. As researched on 27 September 2026: private adult use is decriminalised, the Cannabis for Private Purposes Act (2024) is not yet in force, a commercial Cannabis Bill is expected from mid-2027. So commercial THC trade is lawful only under SAHPRA licensing, and the platform's default mode is **MEDICAL**.

10.1 Product classes, and what each may do

Every product has exactly one regulatory class. The class decides where it may be sold, whether it is age-restricted, whether it may carry incentives, what facts it must declare, and which rules its master data must pass before it can be listed (defaults shown; HQ › Compliance changes them without a deploy).

Class	What belongs in it	Sold via	18+	Deals, member prices, points, commission	Master-data rules and facts
Licensed (THC)	Cannabis medicines containing THC	In store and click & collect only; only at licensed stores; to patients, by a dispenser (medical mode)	Yes	**never (medical mode)**	Grams per unit for the limits; legal basis "SAHPRA licence: medical pathway (Section 21 authorisation required)"
CBD supplements (Schedule 0)	Oils, softgels (complementary medicines)	All channels	Yes	**no, by default (until counsel clears it)**	up to 600 mg CBD per pack, up to 20 mg daily dose, THC up to 0.001%; ingredients and allergens; approved low-risk claims only (GN 586 of 2020)
CBD food & drink	Coffee, tea, protein	All channels	Yes	yes	Net content required; CBD up to 0.0075% of net content (0.075 mg per gram or ml, e.g. at most 18.75 mg in 250 g); only the CBD naturally in the ingredients (tick to confirm); THC up to 0.001%; ingredients and allergens
CBD skin care	Creams, balms	All channels	Yes	yes	THC up to 0.001%; no daily dose (applied, not taken); net content and ingredients; claims screened; legal basis defaults to cosmetics (Act 54 of 1972)
Hemp	Hemp seed and fibre products, no CBD claims	All channels	Yes	yes	Hemp products within the Schedule 6 exclusion (≤ 0.2% THC; 2% is the limit for growing hemp)
Supplements	Collagen, plain protein; no cannabis at all	All channels	—	yes	No CBD fields; ingredients naming CBD, cannabis or hemp are refused; net content, ingredients and allergens (foodstuff, R146 labelling)
Accessory	Grinders, glass, papers, gear	All channels	Yes	yes	"Tobacco-related" flag for pipes, papers and vapes
Apparel	Clothing and merch	All channels	—	yes	Merch designs carry the brand and heritage motifs only; sold on its own, never as a gift with medicines
Grow	Soil, nutrients, lights, seeds	All channels	Yes	yes	Seeds: legal position unclear; to be reviewed

Every store is adults-only regardless (supplements and apparel aren't age-restricted by law, but the shop's gate and the membership terms apply to everything). The catalogue form, the save action and the CSV import all run the same checks; a change to compliance data is audited as `compliance.product`.

10.2 THC in medical mode, and the adult-use switch

Medical mode (default) — A licensed product may be sold only at a store whose licence covers it; only to a member with an active SAHPRA Section 21 authorisation; only within the authorised monthly quantity (grams dispensed in the last 30 days, plus open online orders, against the limit); only by an authorised dispenser at the till or at handover; never delivered; never advertised (hidden from the shop unless a signed-in patient is looking, hidden from menu boards, never indexed by search engines); no incentive of any kind; every dispensing in the register. The licence reference prints on receipts and invoices.

Adult-use mode — One HQ switch (type ADULT USE to confirm) for when a commercial regime commences: licensed classes sell to verified adults within a **daily limit** per member (30 g by default, counted across posted sales and open orders), still only at licensed stores. Before switching: confirm the commencement notice, limits and channel rules with counsel and update the settings per region or store. THC must stay licence-gated whatever the mode.

Tobacco Bill mode — For when Bill B33-2022 commences: tobacco-related products (pipes, papers, vapes) become in-store only and earn no points.

10.3 No incentives on medicines (Medicines Act s18A)

The Medicines Act prohibits supplying a medicine under a bonus, rebate or other incentive scheme. The platform applies this to licensed products in medical mode and to the classes HQ lists under *No promotions, points or commission* (CBD supplements by default, until counsel clears them). For those lines, everywhere at once: no promotion applies and the line doesn't count towards one; no member or tier price; no volume price; no near-expiry markdown; no points earned, and no points may be redeemed against them; never in a drop, a My Deal or a welcome gift; no staff commission (locked at 0%); the till marks the line *Medicine · no incentives*. Merch is never given away with, or earned by, a medicine purchase.

10.4 Adults only: age gates and ID checks

- The shop and the corporate site open with an **18+ gate**; under-18s can't enter.
- Joining needs an SA ID number (validated) or a passport date of birth; anyone under 18 can't join or buy age-restricted products, even if a document was shown.
- Every sale of an age-restricted class records how age was confirmed: *ID number* (validated), *ID sighted* (a document at the counter), *Verified* (a live check), or none. Online, age-restricted orders need a verified member; at handover and delivery the ID is checked again and recorded on the order.
- Events are 18+ with ID at the door; delivery is only to the member named on the order, in person.
- The **Age checks** report shows every restricted sale and how it was confirmed.

10.5 Members only, and the membership terms (CPA, ECTA)

With *Members only* on (the default), every sale, online and at the till, needs a registered member. Membership is a control (verified adults, records, traceability for recalls); it never makes selling THC lawful by itself. Everyone accepts the versioned membership terms when they join, with the key terms shown in plain language first (CPA s22 plain language, s49 notice of terms that limit rights); the accepted version and time are kept on the member and in the audit log. The terms and the returns and delivery policies carry the supplier information and cooling-off rights ECTA s43 and s44 require, the 30-day delivery rule (s46) and the 6-month faulty-goods rights (CPA s56). Walk-ins join at the till in about 20 seconds; offline, the till takes the member number from the card and the server checks it on sync; an unknown number is audited, not lost.

10.6 Personal information (POPIA) and marketing consent

Minimal data	SA ID numbers are stored only as a keyed hash plus the last 4 digits; clinical conditions are never stored (s26); the responsible party for Rewards is the franchisor; the Information Officer (Reshigan Govender) must be registered with the Information Regulator before launch; members can request a copy, correction or closure, and HQ can export or anonymise a member (s24); financial and dispensing records stay for statutory retention, detached from the person.
Consent per channel (s69)	SMS, WhatsApp, email and app notifications are separate consents, all off by default, each change written to a ledger with the exact wording shown, the source (online, in store, Rewards settings, STOP reply, admin) and the time. In store, staff must ask the scripted question and record the answer before a member can be created. Campaigns go only to consenting members; every marketing message carries the sender's details and an opt-out (reply STOP; a signed one-click unsubscribe link).
Profiling (s11(3))	My Deals use purchase history only for members with personalised deals on; the app lets them turn it off.
Staff monitoring	Loss-prevention rules are transparent and show their evidence; an alert is never shown or emailed to the person it is about. Franchisees must tell staff in their employee privacy notice that till, cash and stock activity is monitored for loss prevention.
Cross-border (s72)	Banking slips in Cloudflare R2 (EU) and the site's enquiries and early-access list in Cloudflare D1 (EU) are transfers abroad: record them in the POPIA register.
Breach (s22)	Contain (revoke sessions, rotate secrets), assess from the audit log, notify the Regulator and the people affected, document everything (chapter 11).

10.7 Direct marketing windows and the opt-out registry (CPA)

CPA Regulation 4 permits direct marketing on weekdays 08:00–20:00 and Saturdays 09:00–13:00, never on Sundays or public holidays. The platform holds any campaign or drop alert scheduled outside those hours until the next allowed slot (the SA public-holiday calendar is built in). The 2026 CPA regulations' opt-out registry is imported monthly into the do-not-contact list, which every send is checked against.

10.8 Copy screening: advertising, claims and social

Every piece of copy that could reach a member (campaign messages, product copy and claims, category names and blurbs, events, drops, reviews, the policies, and every string on herbalholland.com) is screened for: medicinal claims (cure, treat, heal, prevent, remedy; Schedule 0 CBD may only make low-risk wellness claims); named medical conditions; glamorised intoxication (ARB Code 3.3); references to minors; absolute or unsubstantiated claims ("100% safe", "clinically proven"; ARB Code 4.1–4.2); and food and supplement health claims (boost, detox, fat-burning, anti-ageing, immunity, weight loss, slimming, metabolism; R146). A campaign with a finding can't be sent. Social posts add: no THC, and no selling cannabis or CBD (no buying, price, delivery or discount wording), brand artwork only, and organic posts only, because Meta rejects cannabis and CBD ads; no TikTok.

10.9 Batches, recalls, destruction and invoices

- **Batch status** (quarantine or recall) blocks sale at every till, DC and the shop instantly; recalls trace to stores and members, notify members, and require every store to acknowledge; stores return or destroy the stock.
- **Cannabis waste destruction** is an adjustment with the reason *Destroyed* and a named witness, on the movement ledger.
- **SARS tax invoices** for every sale (abridged up to R5,000; full above, with the buyer's name and address); plain invoices for franchisees that aren't VAT vendors; serial numbers per device; VAT at 15%.
- **Competition Act s5(2)**: RRP is a recommendation; franchisees set shelf prices; the margin guide warns and never blocks.
- **CPA franchise regulations**: the marketing fund levy is tracked separately; the disclosure document goes out at least 14 days before signing; the franchise page states no earnings or investment figures.
- **Commission is remuneration (BCEA)**: the owner switches it on and agrees it with staff in writing; the platform calculates and freezes each month; it never deducts.

10.10 Gift vouchers and reorder reminders

Vouchers are money	A prepaid voucher is consideration the member already paid: no bonus value, nothing earned on top, never discounted, so it isn't an inducement under the Medicines Act s18A. It is valid for three years from issue (CPA s63(2)), the balance stays on it until then (s63(3)), and it can't be exchanged for cash: a refund of a voucher-paid sale, at the till or for an online return, goes back onto the voucher first and never out as cash. No VAT is charged at issue (VAT is accounted for on the sale it pays for, online or at the till), and the liability is the sum of active balances.
Reminders are transactional	A reorder reminder exists only because the member set it (one product, an interval they chose, a channel they chose, stoppable in one tap), so it is a service message about that request and goes out whatever the marketing consents say (POPIA s69 governs unsolicited direct marketing). Its content is confined to the reminder and the one-tap link: no offers, no promotions, no other products, so it never becomes marketing by the back door. Every send is logged; setting or stopping a reminder is audited; nothing is ever charged.
Wishlists and addresses	Personal information (what a member wants; where they live) shown only to that member; the address goes to the fulfilling store on the order; both are deleted with the account.

10.11 Retention and PAIA

Record	Kept
Sales, invoices, stock movements, dispensing register, audit log	Statutory retention; never deleted (a member's personal details can be detached by anonymising)
Consent ledger	With the member, as evidence
Sign-in codes	10 minutes

Record	Kept
Franchise enquiries on herbalholland.com	1 year after arrival, or 30 days after HQ has them; not-a-fit leads in HQ deleted a year after their last change
Early-access sign-ups	12 months at most
Job applications (by email)	12 months
Failed invoice emails	Retried for 3 days

The PAIA manual for Vantax (Pty) Ltd is published at herbalholland.com/paia (version 1.1), linked from the shop's footer and Rewards settings, and reviewed at least yearly. Requests for records go to the Information Officer at hello@herbalholland.com.

11

CHAPTER 11

Running it: deploys, releases, launch day, routine and incidents

Environments, the first deploy, releasing the app and the site, launch day, the **daily, weekly and monthly rhythm**, backups, incidents, the exceptions worth reviewing, the loss-prevention rules, and the checklist for opening a store.

IN THIS CHAPTER

11.1 Environments
11.2 First deploy and go-live procedures
11.3 Releases
11.4 Launch day
11.5 Routine operations
11.6 Backups and recovery
11.7 Incidents
11.8 Exceptions to review (HQ › Audit log)
11.9 Loss prevention: the rules and thresholds
11.10 When a store opens: the checklist

11.1 Environments

	Local	Staging	Production
Database	Postgres 16 (Docker or local)	Postgres on the staging server	Postgres 16 on our own server in South Africa, WAL archiving + nightly dumps
Files (slips)	`.data/uploads` on disk	An R2 bucket	Cloudflare R2 (EU jurisdiction), or `UPLOAD_DIR` on the server
Data	The seeded demo network	An anonymised copy or the seed	Real; never seed (the seed truncates every table, so it refuses a database with users it didn't create)
DEMO_MODE	true	true, clearly labelled	**false**

Hosting: the app and Postgres on our own server in South Africa, with Cloudflare in front (DNS, TLS, WAF, bot protection, static caching) through a Cloudflare Tunnel, so the server has no open inbound ports. The app doesn't run on Cloudflare Workers; herbalholland.com does.

11.2 First deploy and go-live procedures

1. **Server**: Docker + Postgres 16 (listening on 127.0.0.1 only), a `cloudflared` tunnel to port 3000, and an `.env` made from `.env.example` with `DEMO_MODE=false` from the start (chapter 9). Cloudflare: proxied DNS, SSL Full (strict), WAF managed rules, a cache rule for `/_next/static/*`, and a WAF rule that lets `POST /api/payments/peach` (and `/yoco`) through without challenges, because a challenged webhook never lands.
2. **R2**: a bucket in the EU jurisdiction with a token limited to it; otherwise slips live under `UPLOAD_DIR`, so include it in backups.
3. **Build** the image, run the migrations, start the app, all with `docker-compose.prod.yml` (the app listens on 127.0.0.1 only); health check `/api/health`.
4. Create the first HQ administrator. The franchisor company's details (legal name, registration and VAT numbers, address, phone, email, directors) are edited on the distribution centre's page under **Owner** once it exists: invoices and the legal pages print them.
5. **HQ › Compliance**: confirm THC mode, the channel matrix and store licences with counsel. Once counsel has signed off the legal texts, tick **Counsel has signed off the legal texts**: the review notes disappear from the legal pages.
6. **HQ › Stores**: onboard the DCs and stores (fees, licences, ranging); **Catalogue › Import** loads the range and the warehouse's opening stock after a dry run. After any bulk import run `ANALYZE;` on the database.
7. Pair the tills, create staff with PINs, designate dispensers.
8. **Scheduler**: all four jobs (`frequent` every 15 minutes, `staff-push` every 5, `daily` at 02:00 SAST, `operations` at 03:00 SAST) with the bearer secret, from the server itself (Cloudflare cuts requests at 100 s; the nightly books run at 1,000 stores takes about 2½ minutes). The runbook has the crontab. Then an uptime monitor on `/api/health/jobs`, which fails when a job hasn't succeeded in time.
9. **Peach Payments**: get the written approval; sandbox first (`PEACH_ENV=test`, the API key, the profile's hash key, the webhook registered in the Peach Dashboard, only refundable payment methods on); test a courier order paid with a sandbox card › *Payment received*, the audit entry `order.pay_online`, the member's SMS; cancel it in the back office › refunded, `payment.refunded`; then live keys, a small real order and a real refund. Stuck on "Waiting for payment confirmation…"? The app log says 401 (wrong hash key or the other environment's webhook), 503 (key not set) or nothing (Cloudflare or a wrong URL); meanwhile, a member who reopens the pay page makes the app ask Peach for the payment's status.
10. **Yoco in store**: each store's own Yoco account with written approval; `NEXT_PUBLIC_TAP_PROVIDER=YOCO` at runtime; cashiers trained to charge the machine first and key in the reference; match each store's Yoco settlement to its Z-reports' card total daily.

11.3 Releases

- **The app**: a database dump first (migrations only go forward; to undo one, restore the dump). Migrations run before the new version starts and take table locks, so apply them outside trading hours (after 22:00 SAST); tills keep selling offline and sync afterwards. Before big releases re-run the load test, the crawl and the end-to-end journeys against a production-sized copy. Measured capacity: about 45 sales a second on one instance; POS posting p95 about 440 ms.
- **The site**: build, apply D1 migrations and deploy, or upload a preview version first for the owner (chapter 8). Rebuild on or after a press release's date; set `shop.url` when the shop opens.

11.4 Launch day

1. **HQ › Founding Members**: confirm when the list closes (SAST) and the founding places, tier and months (the site says 2,026 places and 14 months). The shop trades normally while the list is open. Stores that haven't opened are *opening soon*; members can pick them as home store.
2. When the list closes the scheduler numbers the Founding Members within 15 minutes (or press **Assign founding numbers now**); spot-check a card shows the number and Sprout.
3. **HQ › Drops / Events**: the first drop and opening weekends scheduled inside the send windows, stock allocated; the till checks guests in from the ticket QR; the door list is the paper fallback.
4. **HQ › Rewards**: My Deals on; the welcome-gift promotion live (first purchase only).
5. Pair and install the tills (Chrome on Android: `/pos/pair` › Install the till app › pair); managers add the back office to their phones; members get the Rewards nudge on their card.
6. The day before the shop opens, export the early-access list from the site's D1 database (the runbook has the command) and paste it into **HQ › Marketing › Studio** › First-access list. The shop launch's opening-day SMS (09:00) and email (09:05) tell each person once and delete their sign-up as they go. Then delete the site's copy, and set `shop.url` so the site's sign-up closes.
7. Watch the till member-attach rate, sign-ups per hour and SMS spend for the first 48 hours.

11.5 Routine operations

When	Task	Where
Every 15 minutes (job)	Release campaigns held for a legal send window; cancel unpaid online orders after the hold; retry failed invoice emails; number Founding Members once the list closes; send drop alerts to watchers; email paid merch orders to the partner; note when a wished-for item runs out across the network and when it is back; post what's waiting for the books	`/api/cron/frequent`

When	Task	Where
Daily 02:00 (job)	Birthday points; cancel pay-in-store collections not collected within the hold; lapse expired tier floors; loss-prevention rules and the digest email to owners and area managers; purge not-a-fit leads; load the week's My Deals (Mondays); settle the stock-order invoices of a month that's over (on its statement); send the day's reorder reminders; expire gift vouchers at three years and cancel voucher orders unpaid for two days; post the day's trading (and on the 1st, the month's franchise statements) to the books, then match open bank lines again	`/api/cron/daily`
Every 5 minutes (job)	Staff phone notifications: new online orders (polled, so an order shows within five minutes), loss alerts raised in the last day (never to the person they're about), HQ updates that still need acknowledging; each event is keyed, so a poll never sends twice	`/api/cron/staff-push`
Daily 03:00 (job)	Lots entering the 30-day expiry window (once per lot), cash due at the bank today or overdue (once per store per day), the low-stock digest per store from the replenishment plan, every scheduled report export due today (emailed as a signed link), and pruning of old push-event keys and export files	`/api/cron/operations`
Daily (store)	Close every cash-up; bank yesterday's cash by the next business day (Banking: tick the cash-ups, amount, reference, photo of the stamped slip); review negative-stock and compliance-event reports	Till · Store › Banking, Reports
Daily (manager)	Work the Today list on the store overview: orders to pick or hand over, cycle counts due, cash to bank, open alerts, expiring lots, low stock, lapsing patient authorisations, HQ updates, supplier invoices due; capture supplier invoices as deliveries arrive	Store › Overview, Finance › Supplier invoices
Daily (DC)	Enter courier and tracking on merch orders from the partner's emails (*Merch shipped*); chase anything sent more than 7 working days ago; mark delivered	DC back office › Online orders
Daily (owner / area manager)	Check new deposits against the bank statement (Verify, or Query with a note); work the loss-prevention alerts	Store › Banking, Loss prevention
Daily (HQ finance)	Match the gateway's settlements to orders; match each store's Yoco settlement to its Z-reports	Peach Dashboard / Yoco portal, Reports › Payments
Weekly	Replenishment orders submitted, approved and shipped; expiry report actioned; the Studio's coming posts approved and queued, the week's WhatsApp Channel and Google posts made by hand, and comments answered in Postiz (never orders in DMs)	Purchasing / Distribution; HQ › Marketing › Studio
Monthly	Cycle counts per category; franchise statements emailed; the NCC opt-out registry imported; VAT201 working per store; the owner approves last month's commission for payroll (people with open alerts are held) and downloads the CSV	Stock takes; HQ › Statements; HQ › Campaigns; Reports; Store › Commission
Quarterly	Access review (users, roles, devices); a restore test from backup	HQ › Team, Store › Team; database
Continuous	Health check, error rate, latency, database connections	Load balancer and monitoring

11.6 Backups and recovery

Postgres WAL archiving (point-in-time recovery of at least 7 days) plus a nightly encrypted dump copied off the server to R2 and kept 35 days; slips on disk are copied with it. Quarterly restore drill into staging. Targets: RPO 5 minutes, RTO 1 hour. The stock and loyalty ledgers are append-only, so balances can be rebuilt from movements; the reconciliation queries in the runbook check that stock levels equal the ledger, rollups equal sales, loyalty balances equal the ledger, and that no member saving was ever given on a medicine or to a walk-in.

11.7 Incidents

Till offline — Tills keep selling for cash, or card on a bank terminal or the Yoco machine; tap on glass, PayShap, points, licensed items, drops and shifts wait for the connection. Don't clear browser storage; check the queue badge before closing the shift.

Card acquiring down — Use the bank terminal tender, cash or PayShap; record references.

Online payments down — Members see "We couldn't open Peach Payments' payment page" and unpaid orders are released after the hold as usual. Peach retries webhooks we didn't answer for 24 hours (Yoco for about a day, then switches the webhook off after 5 days, so register it again). A payment that lands after its order was released is logged as `payment.review`.

Product recall — HQ › Batches › Recall: unsellable everywhere immediately; stores acknowledge, quarantine and write off (recall return or witnessed destruction); affected members listed and notified; keep the recall report for SAHPRA.

Wrong price or promotion live — HQ › Pricing / Promotions › end or pause it; tills pick it up on the next refresh; refund affected sales at the till.

Suspected data breach — Contain: delete sessions (that signs people out; changing `SESSION_SECRET` doesn't) and rotate leaked provider keys. Rotate `SESSION_SECRET` only if it leaked: every signed link already sent stops working and stored ID-number hashes stop matching. Then assess scope from the audit log, notify the Information Regulator and affected people as soon as reasonably possible, document everything.

11.8 Exceptions to review (HQ › Audit log)

Action	Meaning	What to do
`compliance.offline_exception`	An offline till sale broke a rule the till couldn't check, including a member number that matched no member	Review with the store manager; find the member if you can; retrain if needed
`sale.tender_variance`	Payments didn't match the total on a synced sale	Reconcile against the terminal report
`drop.limit_after_payment`	A card was charged before a drop limit tripped (a race with an online order); the sale stands	Decide whether to contact the member; no refund unless they ask
`payment.review`	A gateway payment didn't fit its order: another amount, another checkout, or paid after cancellation. The order was **not** marked paid	Find the payment in the Peach Dashboard or Yoco portal; refund it there or sort it out with the member; note what you did
`promotion.after_payment` · `offer.used_after_payment`	A paid (or offline) till sale carried a promotion that had just run out, or a My Deal already used elsewhere; the sale stands	Usually nothing: it's a one-off. Repeated cases at one store are worth a look
`auth.lockout` · `pos.pin_disabled`	Eight wrong passwords locked an account for 15 minutes · ten wrong PINs in a day switched a PIN off	If it wasn't them, reset the password (HQ Team, or the owner for store staff) or the PIN (Team), which also lifts the lock
`member.collision` · `otp.ceiling`	Someone tried an ID number or email already linked to another member (three a day, then refused) · sign-in codes paused at the network's hourly SMS ceiling	A run of collisions from one person is probing; a ceiling hit during normal trade means raising `OTP_SMS_HOURLY_MAX`

Action	Meaning	What to do
`payment.refund_failed`	The gateway couldn't complete the refund of a cancelled order; the order shows paid again	Refund the member by hand (Dashboard, portal or EFT) and note it

11.9 Loss prevention: the rules and thresholds

Rules run nightly, at each shift close and when a deposit is recorded. High severity is emailed at once to the store's owner and area manager; the rest arrive in the daily digest. Thresholds are HQ settings (HQ › Loss prevention › Rules & thresholds); the defaults:

Alert	Raised when	What to do
Cash-up short	A shift is counted R50 or more under expected (high from R500)	Recount with the manager; check the Z-report and refunds; note the outcome
Repeated cash shortages	The same person closes 3 shifts short in 30 days	Go through the cash-ups with them; consider two-person closes
Cash not banked in time	Cash-ups past the next-business-day deadline (high after 3 days)	Bank today; check the safe count
Deposit short	A deposit is R50 or more under its cash-ups	Query the deposit; the manager explains and banks the difference
Suspicious refund	A card sale refunded in cash, or two of: someone else's sale, within 30 minutes, just before the shift closed	Check with the member and the terminal report; card sales go back to the card
High refund rate	A person's refund rate is 3× the norm for their role across the network (5+ in 30 days)	Review their refunds
Own sales refunded	10% or more of a person's own sales refunded this month (5+)	Can inflate commission, so their commission is held until the alert is closed
Stock write-offs	A week's damaged, theft, lost, expired and count losses are 2.5× the store's norm (R500+)	Check the adjustments and who made them; recount
Sales on own member card	Staff rang up a sale on their own member card	Staff purchases are rung up by someone else
One card, many sales	One member card on 4 or more of one person's sales in a day	Check for points skimming
Unusual offline selling	A week's offline share is 3× the store's norm (10+ sales)	Check the connection first, then the tills
Sales outside trading hours	Sales more than 30 minutes outside the store's hours	Check who and why
Compliance exception	An offline sale broke a compliance rule	As for `compliance.offline_exception` above

11.10 When a store opens: the checklist

HQ tracks this as the store's **opening checklist** (chapter 6): seeded when the store is onboarded, with due dates counted back from the opening day, ticked off with notes, and shown as progress on the stores list. The procedure, in the order the platform expects it:

1. **HQ › Stores › Onboard a store**: code, region, serving DC, format, status *Opening soon* and the opening date, address and coordinates, contact details, receipt footer; the owner company with its VAT status and statement email; franchise fees; the starting range copied from a similar store.
2. **Licences**: capture the SAHPRA licence and reference in HQ before the store sells licensed products; designate and train the dispensers (Store › Team › Authorised dispenser).
3. **Store › Team**: the manager's back-office login (temporary password, changed on first sign-in), every cashier with a PIN, member cards linked.
4. **Tills**: Android devices (11+, Google services, no developer options) with Chrome; install the till app and pair each one; pair the receipt printer and drawer under Shift › This till and test-print; test the barcode scanner; open the customer display where there is a second screen; set the card provider and, for Yoco, the store's own account with written approval.
5. **Stock**: receive the opening delivery from the DC (Purchasing › Receive), then a full blind stock take, approved; reorder points and par levels reviewed; the replenishment cadence agreed.
6. **Pricing**: shelf prices set or left at RRP (Store › Pricing).
7. **Settings**: phone, email, WhatsApp; Click & collect on; Same-day delivery only if the store has drivers.
8. **The menu board** on the TV at `/menu/<slug>`; window posters and the join-Rewards QR (`/club/join?store=CODE`) so sign-ups are attributed.
9. **Training**: sale, members only and the consent question, ID checks, split tenders, offline, refunds, handover with the collection code, stock takes, receiving, recalls.
10. On the morning: **HQ › Stores › status Trading**; the owner opens the first shift with a counted float; watch the first Z-report and bank the first day's cash on time.

12

CHAPTER 12

The books: accounting for every company in the network

A full set of books for **HQ and every franchisee company**, with each store as a dimension. Every sale, refund, deposit, expense, stock order, statement and payment **posts itself**; the accountant adds journals, imports the bank statements and closes the month; the reports, the **VAT201 working** and the management pack come straight from the ledger.

IN THIS CHAPTER

12.1 Whose books, and who keeps them

12.2 What posts by itself

12.3 Journals

12.4 Banking

12.5 Reports

12.6 VAT

12.7 Month end, year end and settings

12.8 Starting the books: the cut-over

12.9 HQ: statements and payments

12.1 Whose books, and who keeps them

Each legal entity keeps its own books: **Herbal Holland (HQ)**, and every franchisee company, however many stores it owns. Stores are a **dimension** on every line, so one company's books report per store or for the whole company. Between the two sides of the network, HQ's *Franchisees* account mirrors each franchisee's *Herbal Holland* account (what HQ collected for the store, what the store owes for stock and fees) to the cent.

Who	Which books	What they can do
Owner (franchisee)	Their company's	Everything: journals (posted straight away), approving the accountant's drafts, banking, closing months and VAT periods, settings, adding accountants
Accountant	Their company's only	Journals as *drafts* for the owner to approve, banking (import, match, allocate), every report and export. No store screens: they sign in straight to the books
HQ admin	HQ's; every franchisee's to read	Everything in HQ's books; reads franchisee books (never changes them); records statement payments; retries a posting that failed
Area manager	Franchisees with a store in their region, to read	Reports and journals, read-only
Everyone else	—	No books: managers, dispensers and HQ staff never see them

Owners open them from the store sidebar, **Money › Books**; HQ from **HQ › Money › Books**, a list of every company's books with how far each is closed, drafts waiting and any check that disagrees; an accountant lands in their company's books when they sign in (`/books/<company>`). The books have their own sidebar: **Overview**; **Record** (Journals, Banking); **Reports** (Trial balance, Income statement, Balance sheet, Cash flow, General ledger, Debtors & creditors, VAT, Management pack); **Set-up** (Chart of accounts, Month end, Settings).

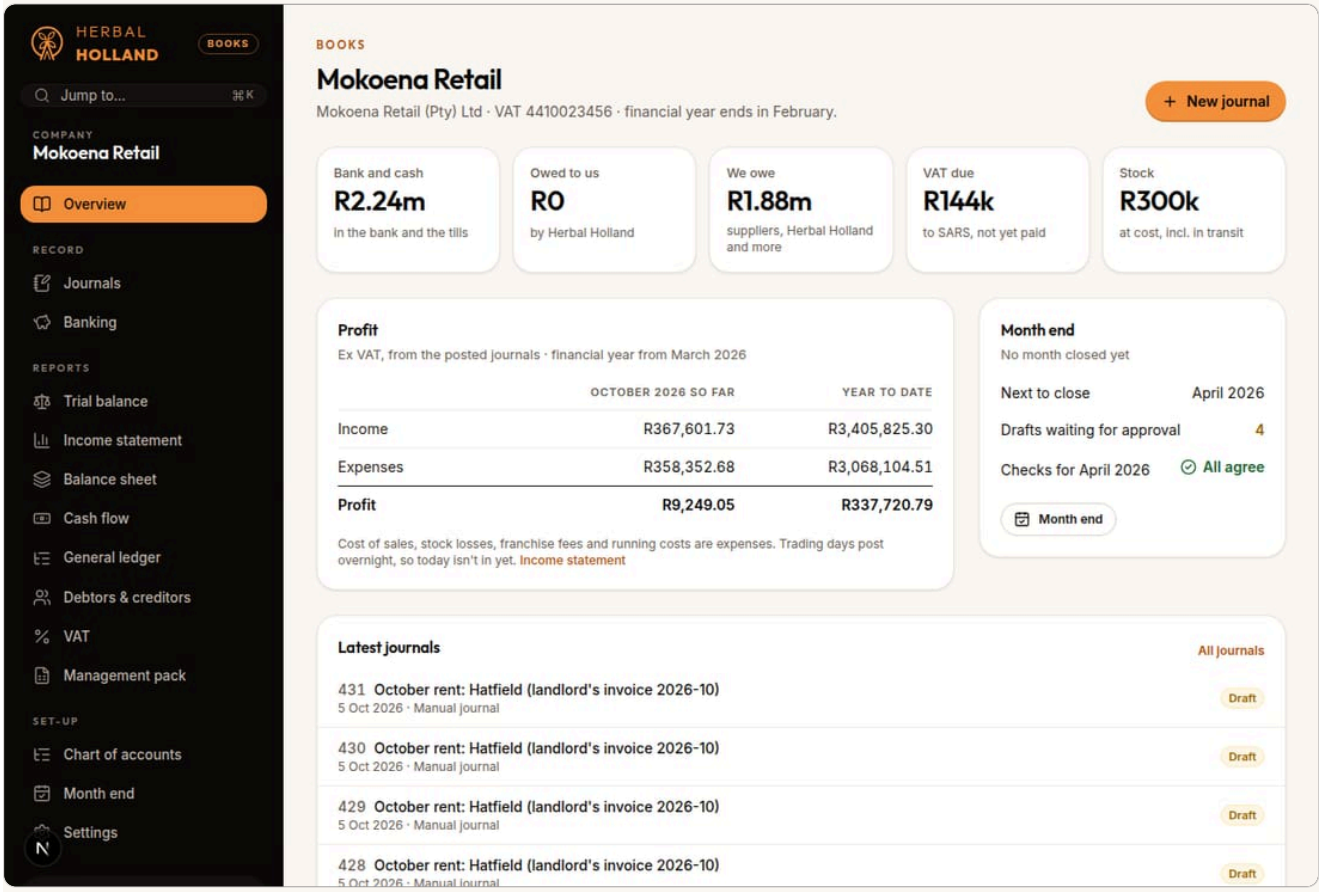

Figure 12.1 **Overview.** The money in the bank and the tills, what's owed either way, VAT due, stock at cost; profit this month and for the year; where month end stands; and the latest journals.

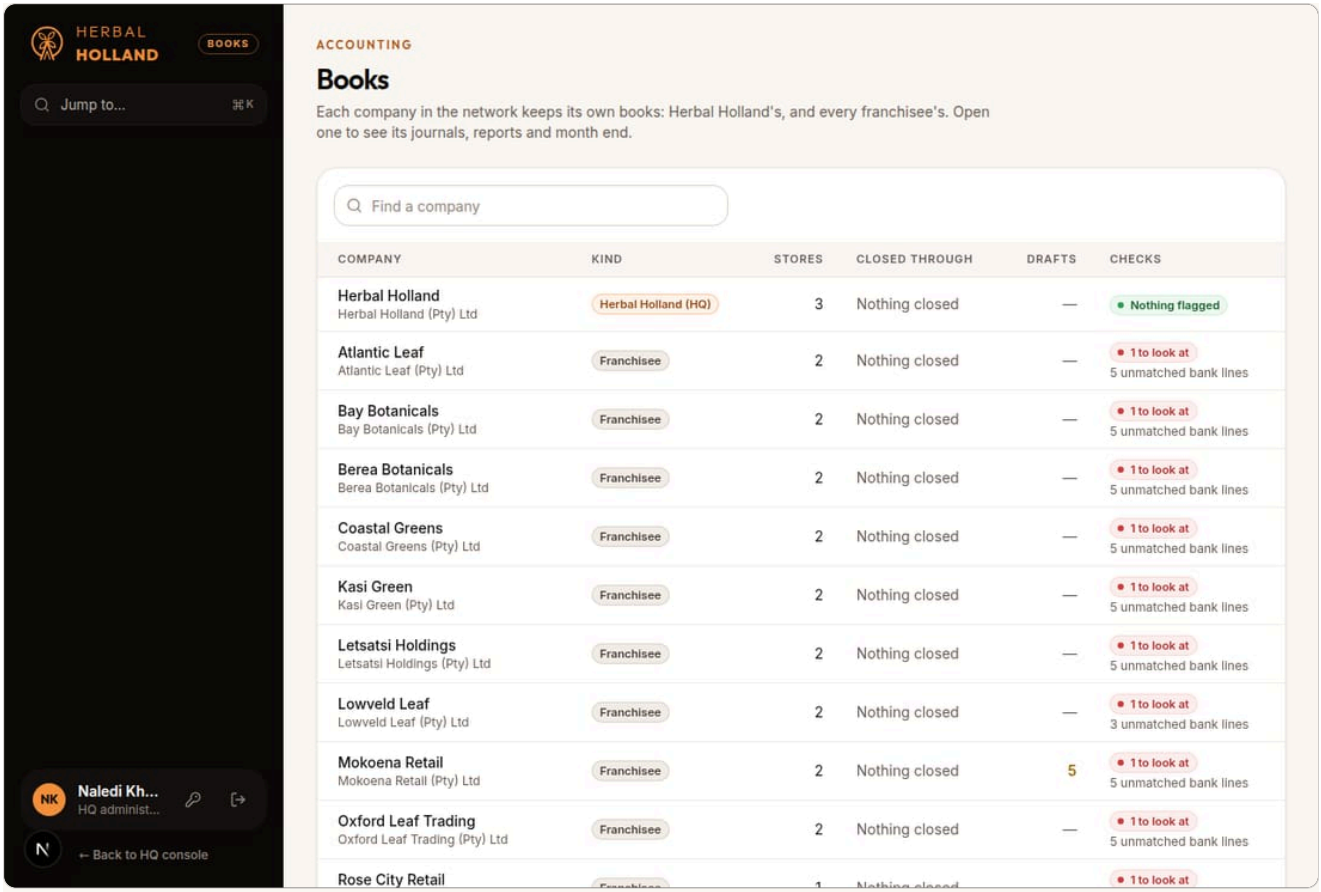

Figure 12.2 **HQ › Books.** Every company's books: closed through which month, drafts waiting, and whether the month-end checks agree.

12.2 What posts by itself

Nobody types in a sale. Each money event is a **source** with its own posting, rebuilt from the records behind it: when the records change (a sale synced late, a deposit corrected, a refund), only the *difference* posts, as a new journal, and a source that disappears is reversed. Trading days post overnight (the nightly job at 02:00); everything else within 15 minutes; a correction to a past day re-posts that day.

Event	The franchisee's books	HQ's books
A trading day (per store)	Sales ex VAT by channel and the output VAT; cash, card, PayShap and EFT; what HQ collected (online, vouchers, points, trade on account) on the Herbal Holland account; stock sold, written off or counted at cost	What it collected or funds for the store, against the franchisee
A cash-up, a deposit	Over or short in the drawer; cash to the bank	—
An expense, an outside supplier's invoice and its payment	The account it's charged to, input VAT (VAT vendors only), the supplier, the bank	—
A stock order from the DC or another store	Stock in at the agreed price, input VAT, owed to HQ; the seller's sale and cost of sales; units lost in transit	The DC's wholesale sale; the trade carried on both franchisees' accounts
The month's franchise statement	Royalty, marketing levy and e-commerce fees with their VAT; points issued	The same fees as income; the points liability
A statement payment	The bank, the Herbal Holland account	The bank, the franchisee's account
Online orders, gift vouchers, Rewards points, trade on account	—	Prepayments and the payment gateway; vouchers in issue (and expiry); the points liability (sign-up, referral, birthday and bonus points are HQ's cost); trade debtors and their EFTs

> RULE
> A month that's closed never changes. Anything that would post into it (a late sale, a corrected deposit) posts into the first open month instead, marked *late*, so the closed month's reports stay as they were filed.

Postings that fail (a day whose payments don't agree with its rollup, say) stay in the queue with the reason, are retried, and are listed for HQ under **Month end › Postings that failed**, with **Retry** once the cause is fixed; an alert email goes to `ALERT_EMAIL`.

12.3 Journals

Journals lists everything posted, newest first, filtered by month, source (trading day, deposit, statement, bank, manual…), status (drafts) and store, with a **Download CSV**. Each journal shows its lines, where it came from (a link to the trading day, the deposit, the bank line…), who entered and approved it, and any reversal.

1. **New journal**: the **Date**, **What it's for** ("September depreciation", "Payroll from the payroll provider"), then a line per account: the **Account**, a **Store** if it belongs to one, the supplier, trade account or franchisee where the account needs one, a note, and a **Debit** or a **Credit**. The totals show as you type; ✓ **Balanced** means you can save.
2. An owner taps **Post journal**. An accountant can only **Save as draft**: the owner sees "Drafts waiting for approval" on the overview, opens the draft and taps **Approve and post** (or **Delete draft**).
3. A posted manual journal is never edited: **Reverse** posts every line the other way round on the date you choose, then you enter the right one. Automatic journals can't be reversed by hand; they follow their source.

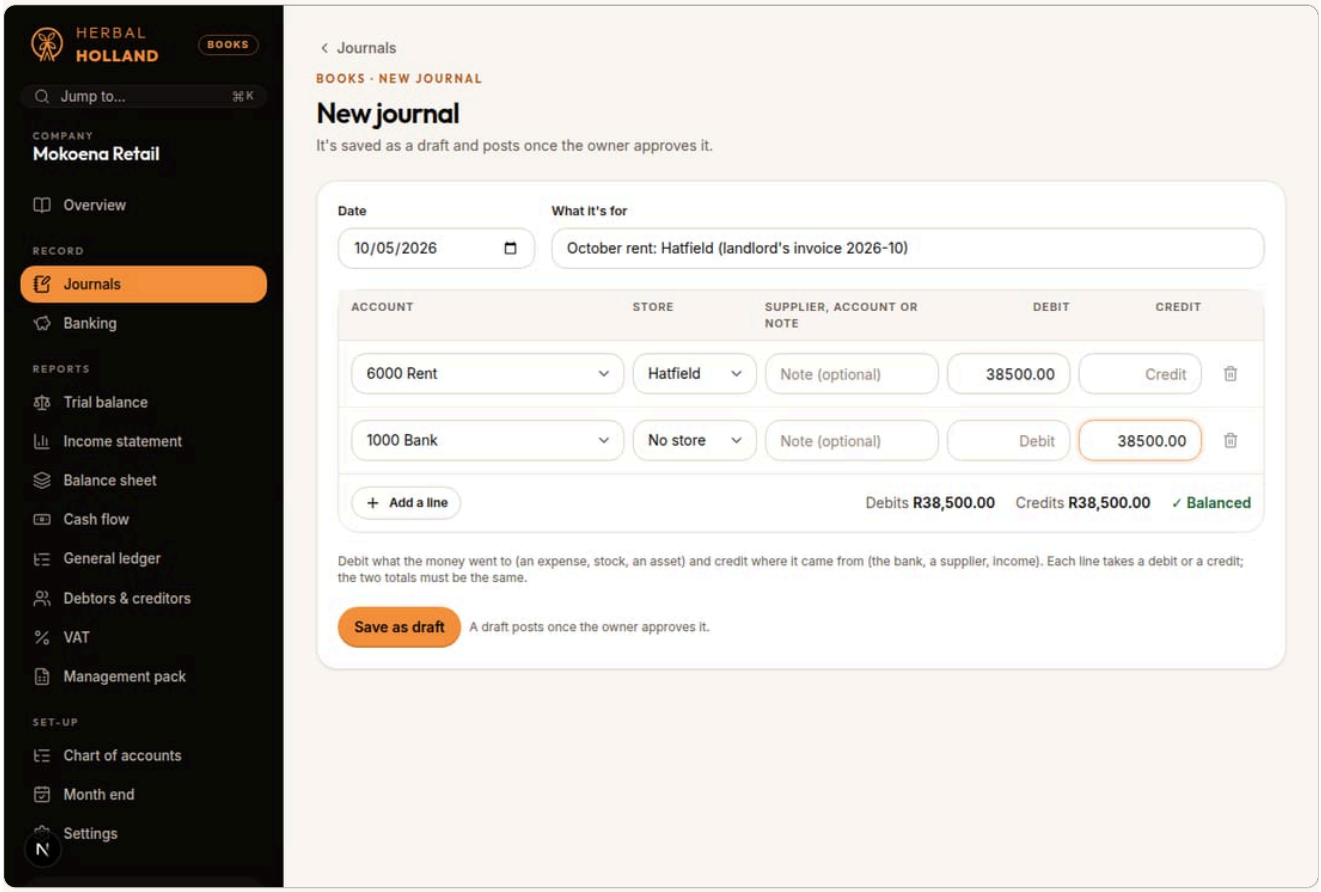

Figure 12.3 **New journal**, by the company's accountant: rent for one store, balanced, and saved as a draft for the owner.

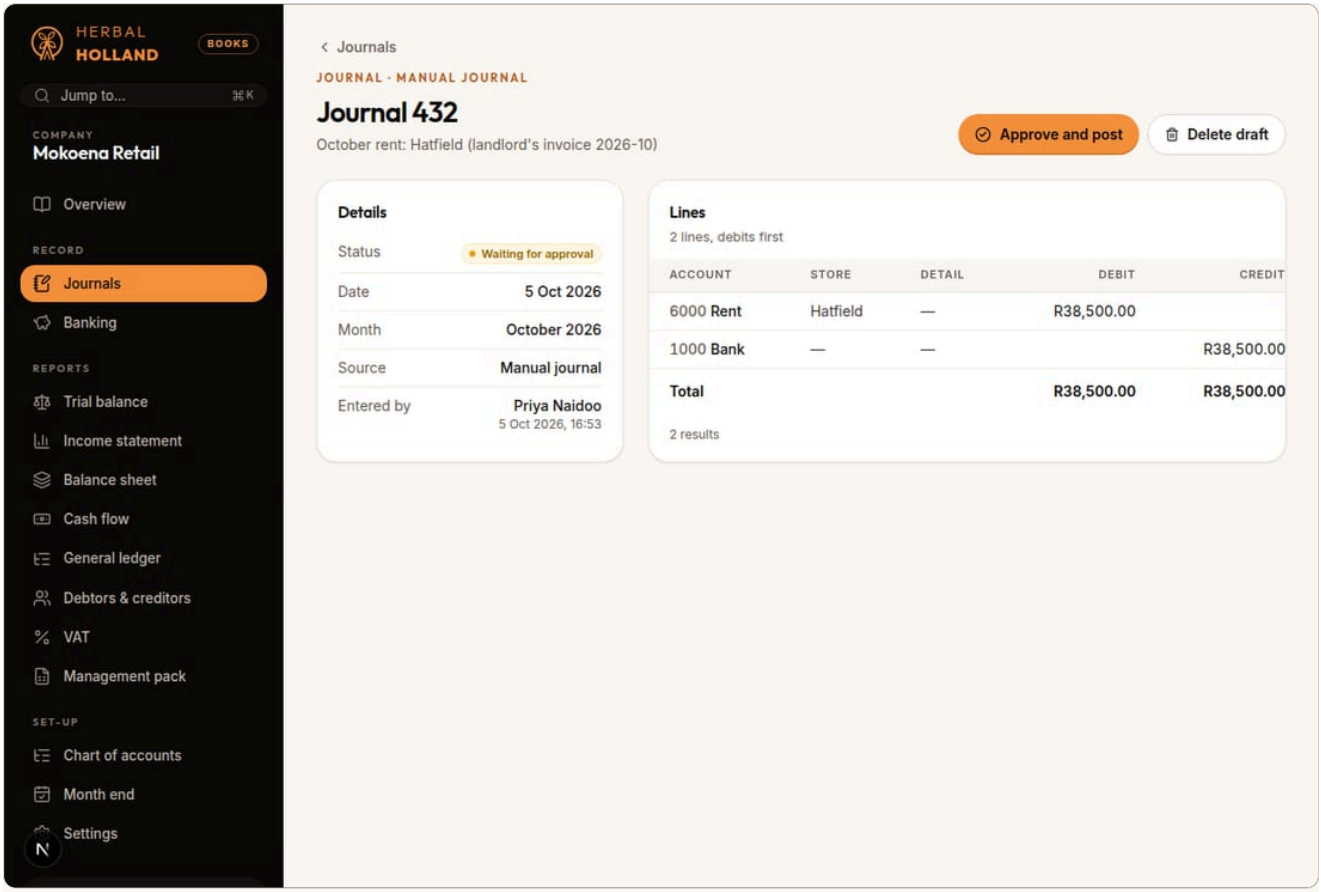

Figure 12.4 The draft, as the owner sees it: **Approve and post** or **Delete draft**.

12.4 Banking

Banking holds the company's bank accounts, with each one's balance in the books against the statement's, and the lines still to do. The first carries the books' *Bank* account (1000), which deposits, payments and payouts post to.

1. **Add bank account**: the bank, a name and at least the last four digits of the account number (a store if the account is one store's).
2. **Import a bank statement**: the account, the file, and the **Format**. *Work it out from the file* reads the CSV downloads of FNB, Absa, Standard Bank, Nedbank and Capitec and OFX/QFX files; any other CSV works by naming its columns. A line imported before is skipped, so overlapping downloads are safe; pending lines are left out; the file is kept.
3. Lines that fit exactly one posting in the books (a deposit, an expense paid, a statement payment, a day's PayShap) **match themselves**. For the rest the page suggests what each could be ("Could be: journal 1042 · Cash deposit..."); tap **Match**, or match by journal number.
4. What nothing in the books covers yet, **Allocate...**: to an account (bank charges, interest, insurance, a SARS payment, a transfer between the company's own accounts) with the VAT in it, or as **A card payout (net of fees)**: the gross clears the card takings, and the fee and its VAT go to card fees. **Ignore** is for lines that aren't transactions of the books (a duplicate download, a payment and its reversal).
5. **Reconcile** sets the statement's balance against the books' **At the end of** any day (the imported balance, or type the **Balance on the statement**) and lists what explains the difference: postings not through the bank yet, and statement lines still to settle. Print it for the month's file.

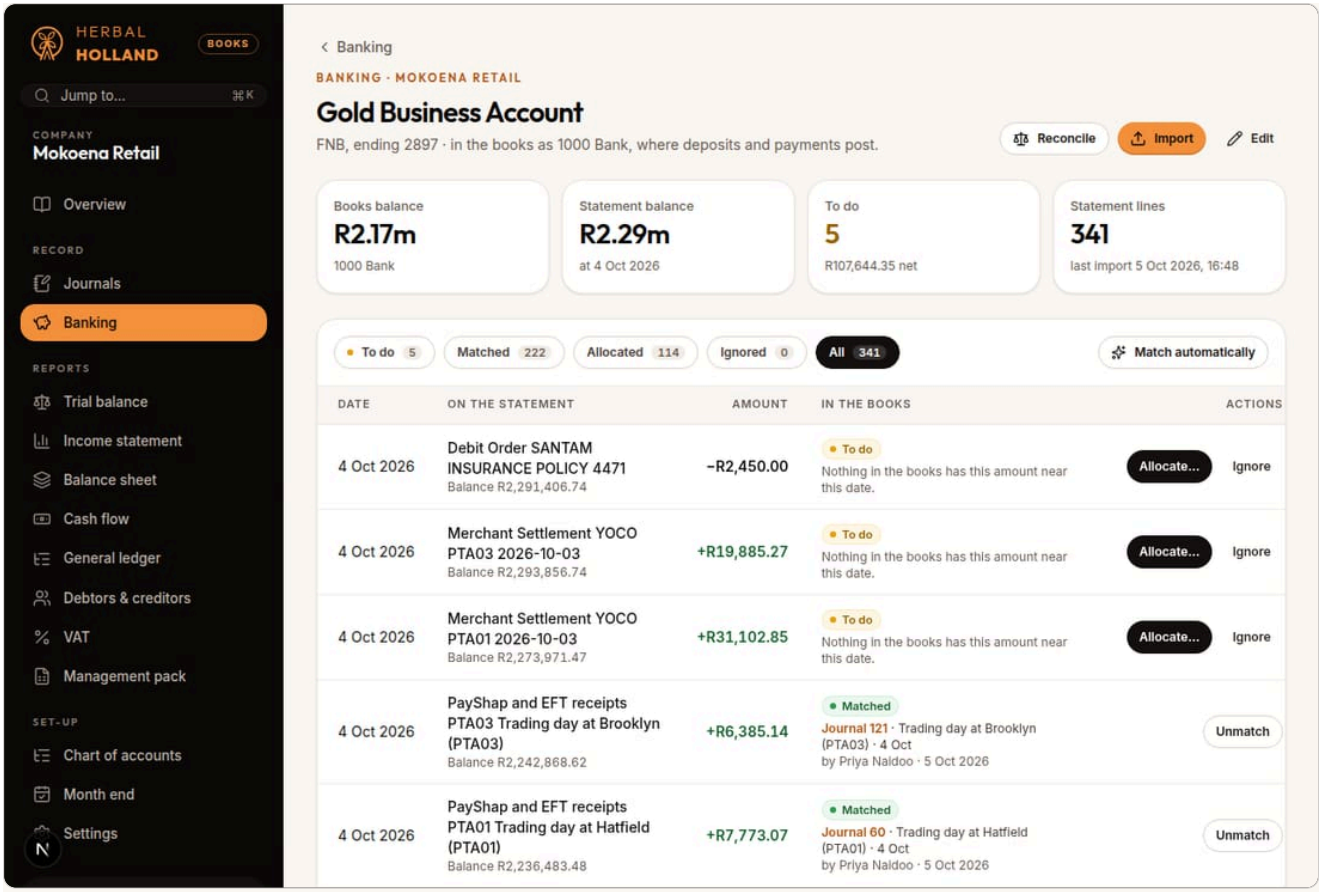

Figure 12.5 A bank account's lines: deposits and statement payments matched by themselves, card payouts allocated net of their fees, and what's left to do with its suggestions.

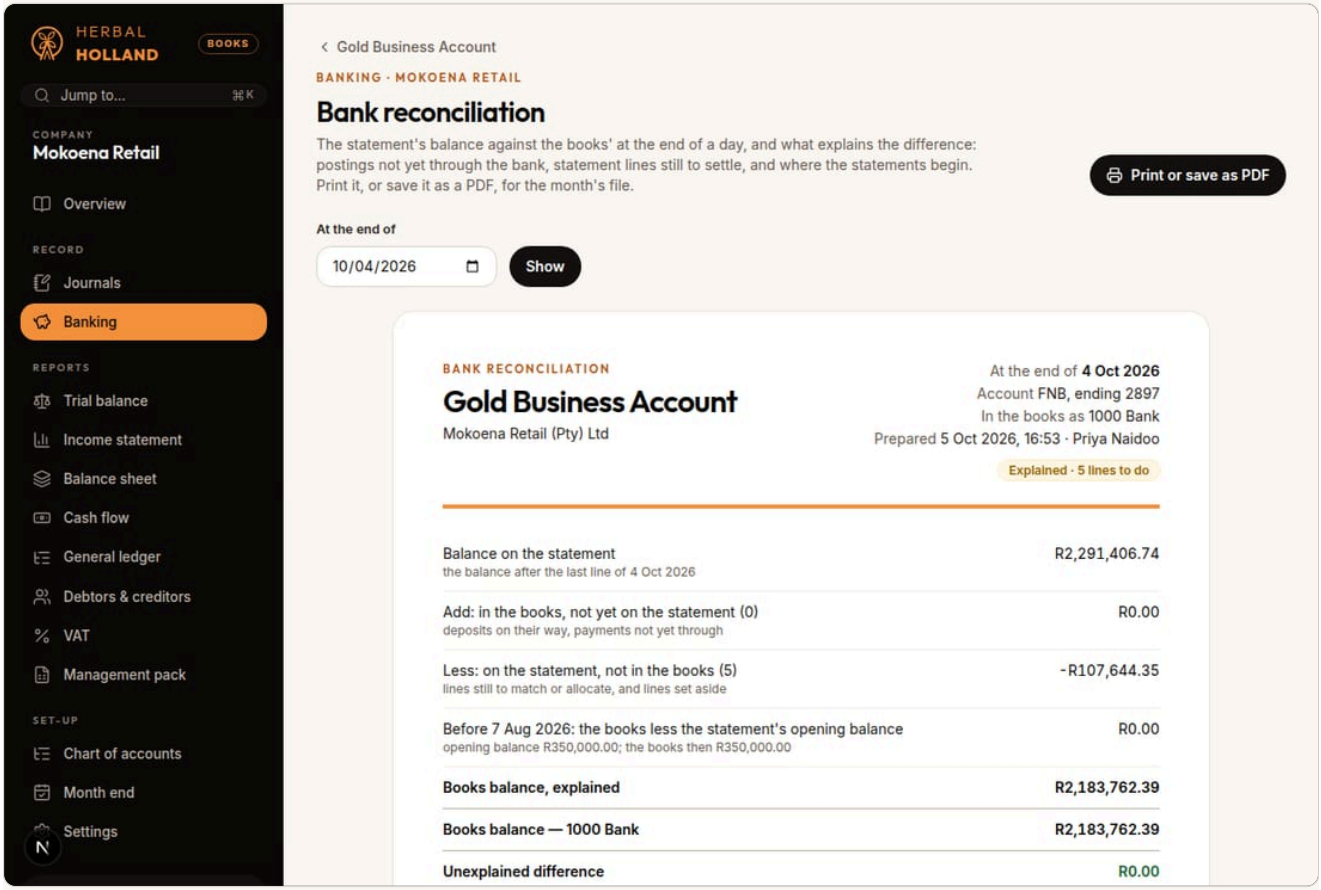

Figure 12.6 **Reconcile**: the statement's balance against the books', and every item between them.

EVERY NIGHT

Statements often arrive before the postings they match (a deposit banked today posts tonight). The nightly job tries every open line again, so most of yesterday's leftovers are matched by morning.

12.5 Reports

Every report takes a period (a month, the financial year to date, or any range), the whole company or **one store**, and offers **Print** (a clean page, sidebar and buttons left off) and **Download CSV**. Every amount opens the ledger behind it.

- **Trial balance**: every account's debits and credits for the period; it must balance, and says so in red if it doesn't.
- **Income statement**: sales by channel, cost of sales, gross profit, the running costs and franchise fees, net profit; **Month by month** or **Store by store**, and against the previous period or last year.
- **Balance sheet**: what the company owns and owes on a day, with retained earnings and the year's profit worked out.
- **Cash flow**: cash and bank at the start, what came in and went out by kind, and the end.
- **General ledger**: one account's lines with the running balance, filtered by store or party.
- **Debtors & creditors**: who owes what and for how long (current, 30, 60, 90+ days), covering suppliers, trade accounts, and the franchisees on HQ's side.
- **Management pack**: the month on a few pages for the owner or the bank, with key ratios, the income statement for the month and the year to date, the balance sheet against the last year end, and the cash flow. Print it or save it as a PDF.

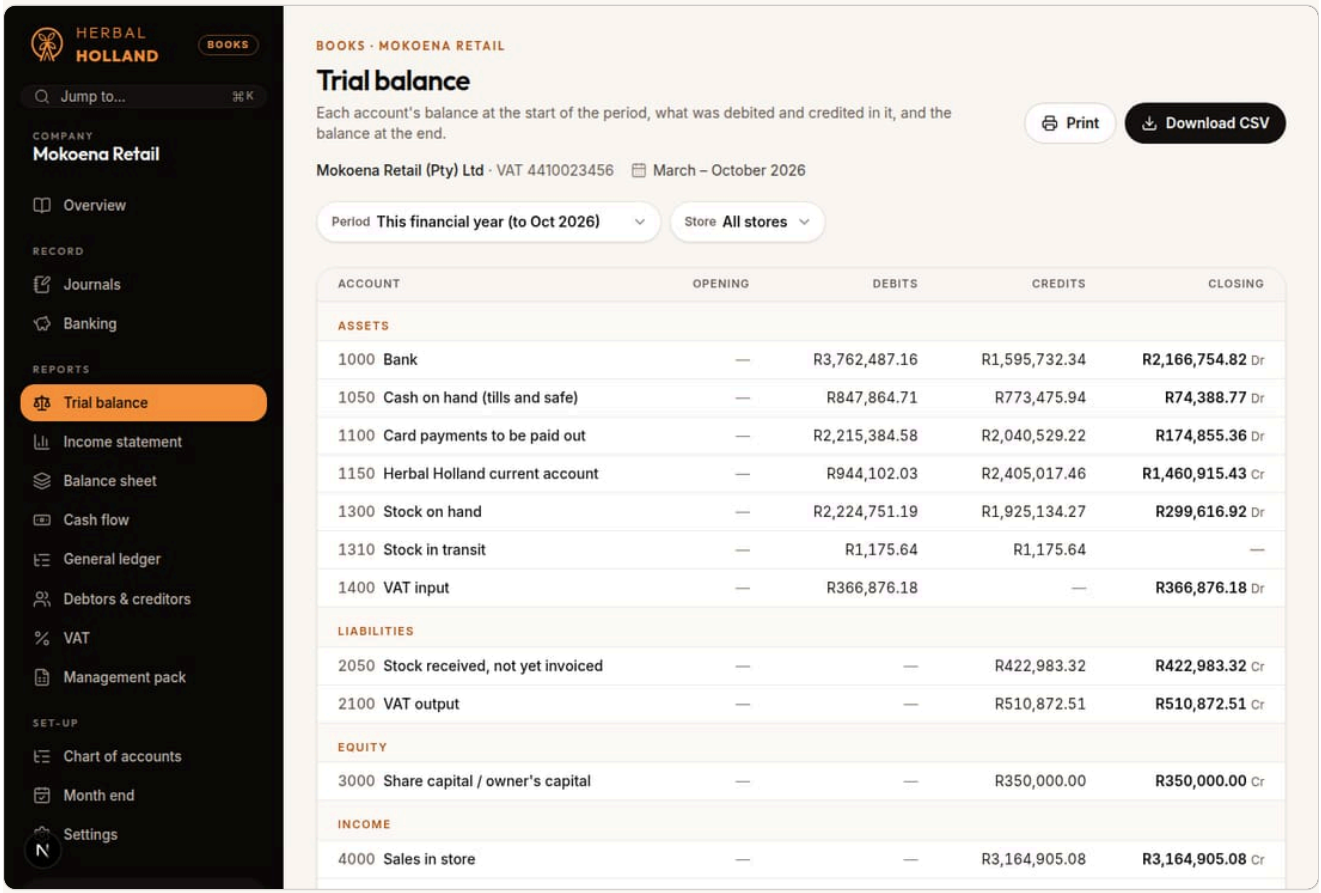

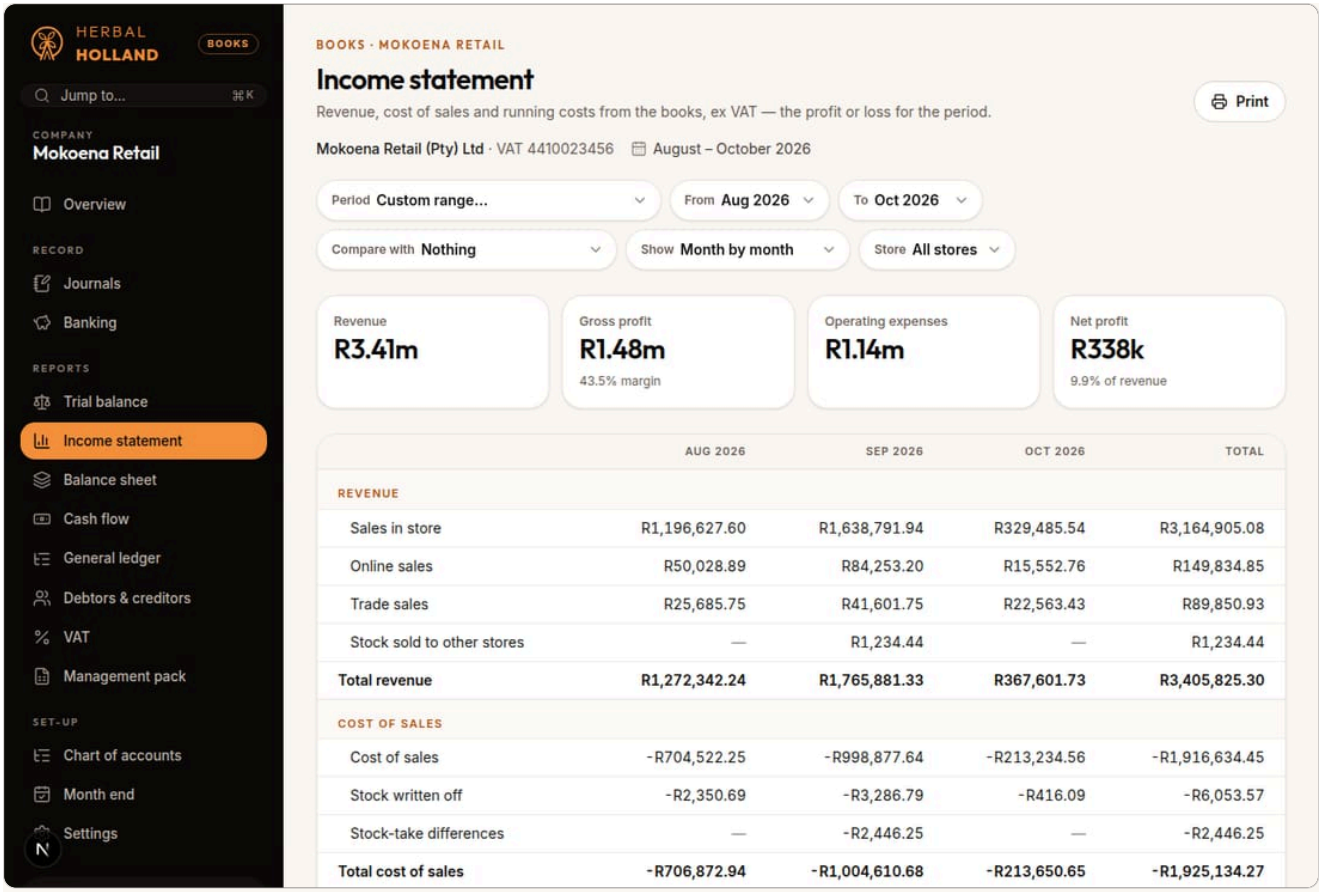

Figure 12.7 **Trial balance** for the year to date, every account with its debits and credits.

	AUG 2026	SEP 2026	OCT 2026	TOTAL

Figure 12.8 **Income statement**: sales, gross profit and running costs, month by month.

12.6 VAT

VAT shows the **VAT201 working** for each SARS period of the company's category (A or B: every two months; C: monthly): standard-rated supplies and output tax, capital and other goods and input tax, and the amount payable or refundable, with every figure opening the ledger behind it. When the return is filed, the owner taps **Close this VAT period**: a journal dated the period's last day moves its output and input tax into *VAT due to / from SARS*, which the SARS payment then clears from the bank. Anything posted into a closed period later shows on the page, to close again. A company that isn't a VAT vendor charges no VAT and claims none; the page says so.

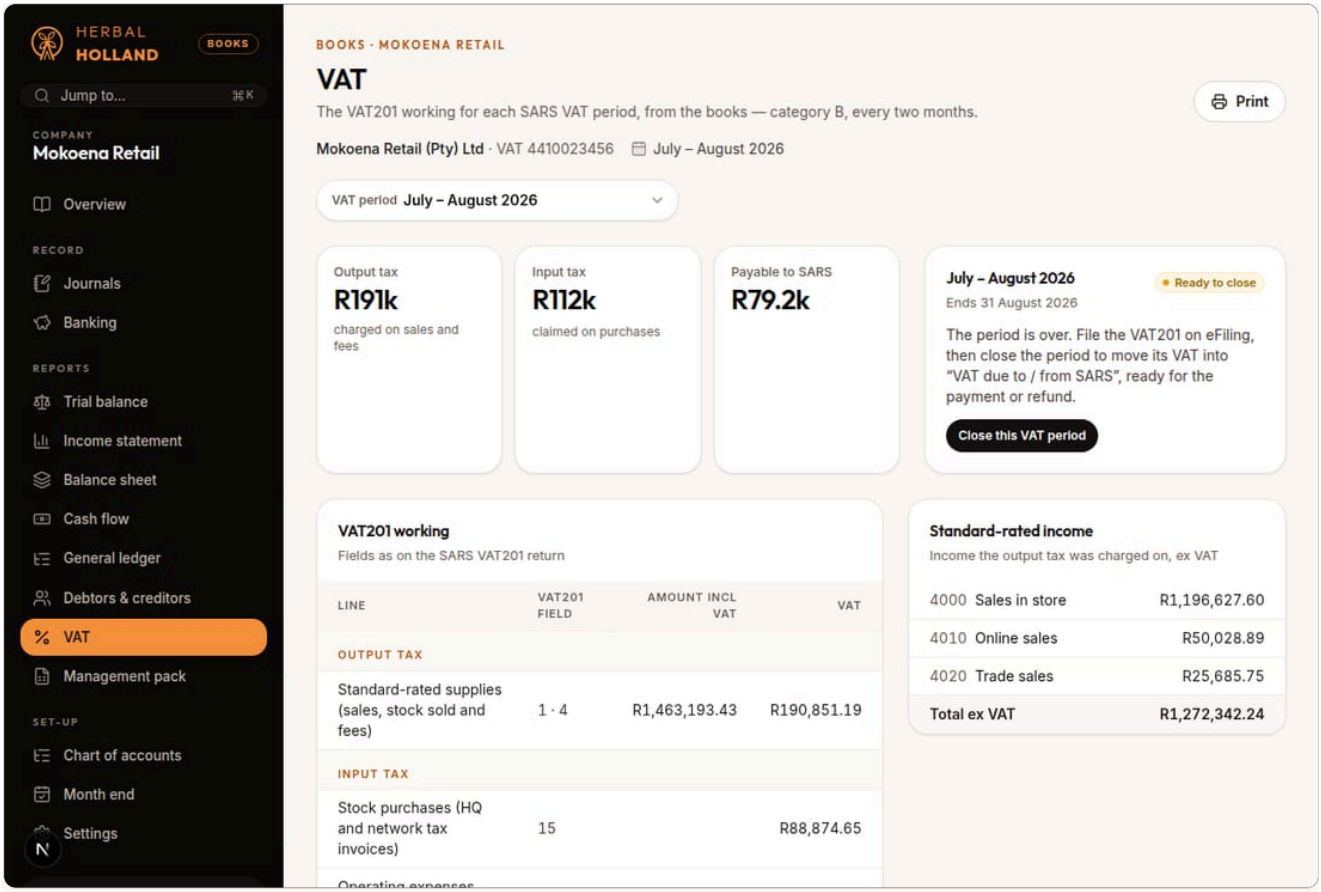

Figure 12.9 **VAT**: the period's VAT201 working, ready to transfer to SARS eFiling, and **Close this VAT period**.

12.7 Month end, year end and settings

Month end runs the checks for the month and closes it. Each check sets the books against the register they mirror, and names the difference:

- debits equal credits; account balances match the journals;
- each store's Herbal Holland account against its franchise statement and the payments on it; HQ's franchisee accounts against each franchisee's books;
- gift vouchers in issue, Rewards points owed and trade debtors against their registers;
- each store's stock against on hand at cost, to the cent;
- nothing waiting or failed in the posting queue; every bank line matched, allocated or ignored.

Known timing items (points or voucher money taken at checkout for orders not handed over yet, and points issued this month that the statement charges at month end) are allowed for and named. Then **Close <month>** closes every month up to it ("Close anyway" if a check still disagrees: correct it in an open month). **Reopen** opens the last closed month again, one month at a time; both are in the audit log. There's no separate year end: the income statement starts again with the new financial year and the balance sheet carries the year's profit into retained earnings.

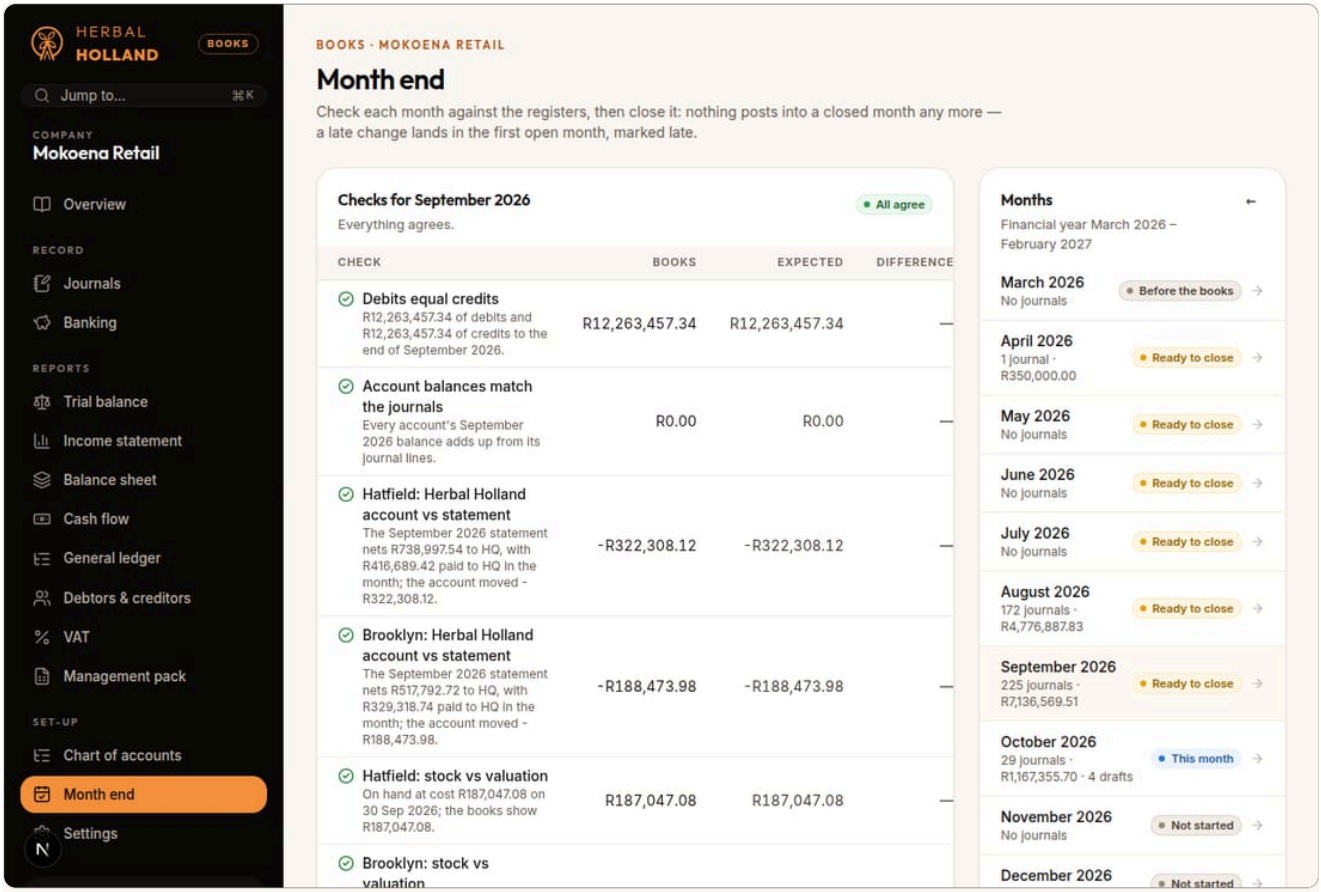

Figure 12.10 **Month end**: the checks for the month, and closing it.

Settings: the **VAT category** (A, B, C, D or F, as SARS registered the company) and the month the **financial year ends** (February by default); the company's **accountants** (**Add an accountant** with a name and email gives them a temporary password, which they change at first sign-in; deactivate or reset one any time); and **Opening balances**. **Chart of accounts** lists every account by type with this year's movement and its balance: add accounts (a four-digit code), rename any, switch off an added one with nothing on it. The system's own accounts can be renamed but never removed.

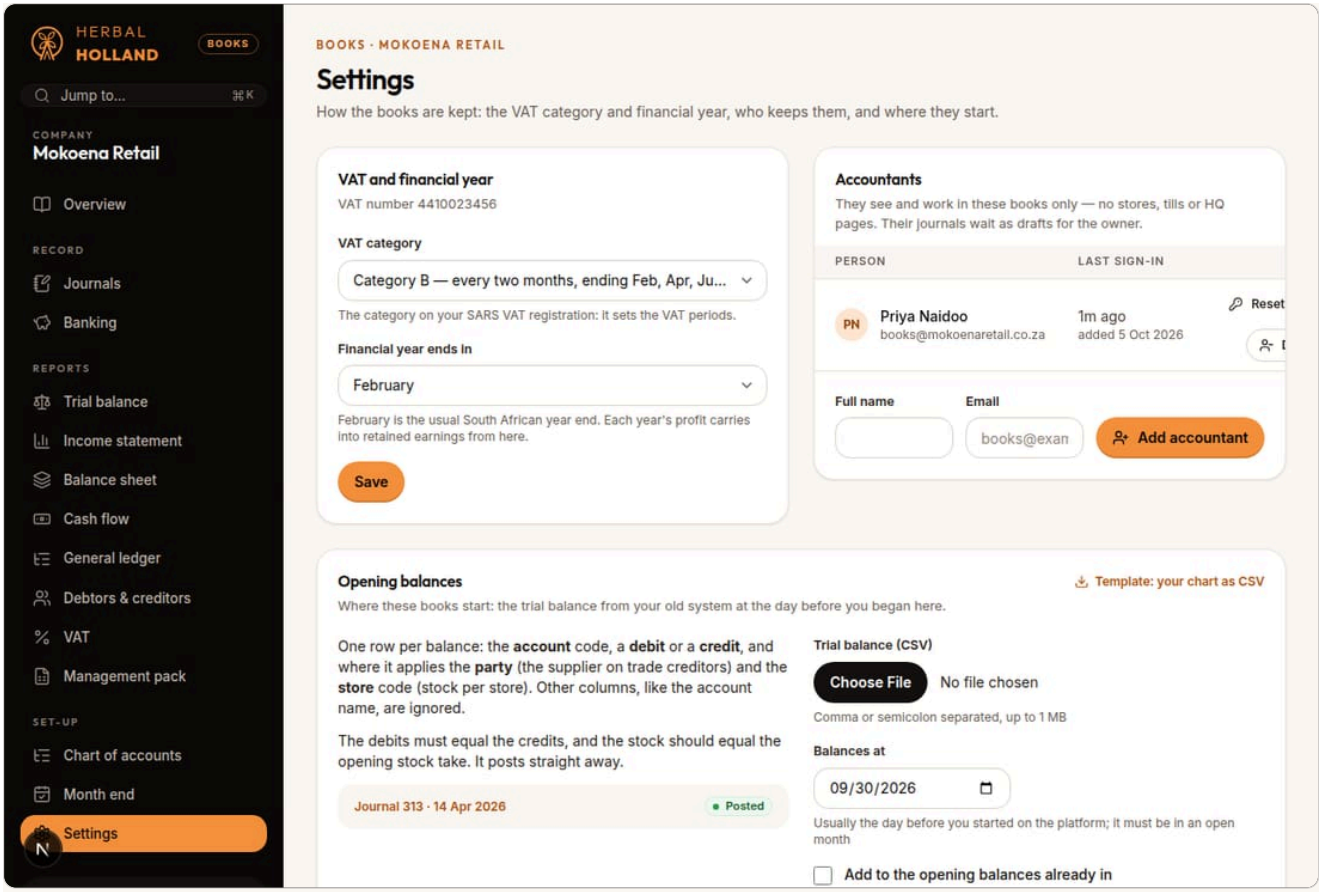

Figure 12.11 **Settings**: VAT and the financial year, the accountants, and the opening balances.

12.8 Starting the books: the cut-over

The books start on the day the platform goes live for a company: the **cut-over**. History before it isn't re-posted; the company's position on that day goes in as **opening balances**, from its previous accountant's trial balance:

1. **Settings › Opening balances** › download the **template**: the company's chart with a row per account.
2. Fill in each balance as at the cut-over (debit or credit; the supplier, trade account or franchisee where an account needs one; a store code to split by store). It must balance.
3. **Import opening balances** with **Balances at** the day before the cut-over. It posts as one *opening* journal (a draft for the owner, if the accountant imports it). A second import is refused unless **Add to the opening balances already in** is ticked; a wrong one is reversed like any manual journal.

At HQ the opening balances include what members held in Rewards points and gift vouchers on the day. After that, the registers and the books move together.

12.9 HQ: statements and payments

The franchise statement settles through the books. On **HQ › Statements**, a store's statement shows **Payments** (**Statement**, **Paid** and **Outstanding**), and an HQ admin records each one as it arrives: **Who paid** (the store paid HQ, or HQ paid the store), **Amount (R)**, **Paid on**, **Bank reference**, a note; **Record payment**. It posts in both companies' books within 15 minutes. A payment recorded by mistake is deleted, and its postings are reversed. The owner sees the same payments, read-only, on the store's statement.

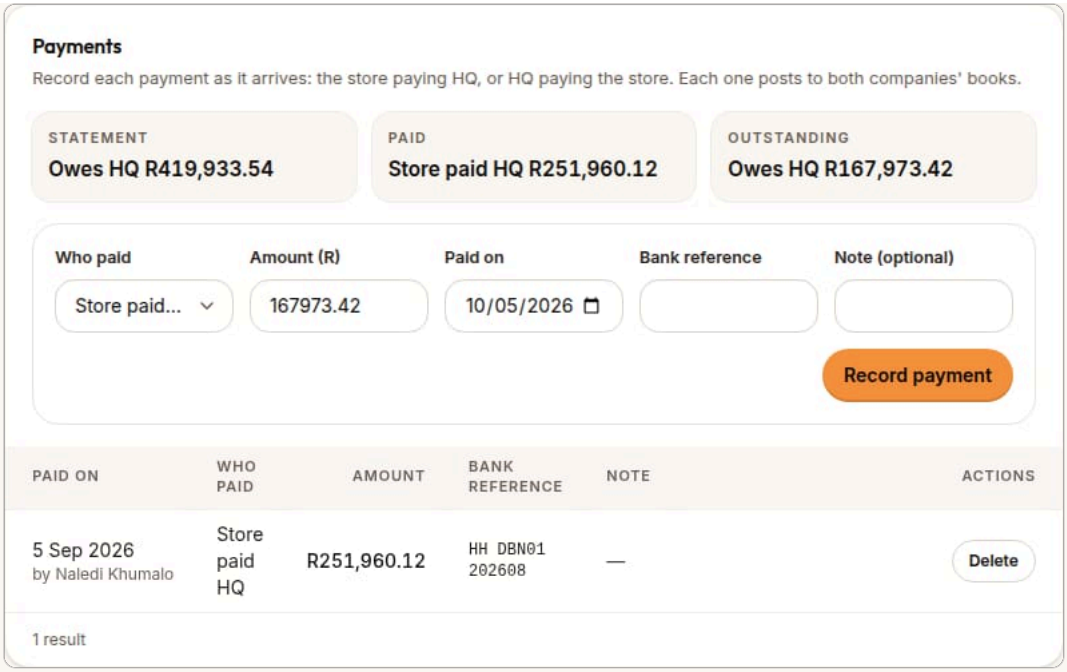

Figure 12.12 A store's statement in HQ with its **Payments**: what's outstanding, and **Record payment**.

IN THE DEMO

Every company's books are posted from the seeded history, as the nightly job would have: HQ opened with the points members held at the cut-over; each franchisee with R350,000 in the bank, and its FNB statement imported (deposits, takings and statement payments matched, card payouts allocated net of fees, the last two days and an insurance debit order still to do). August's statements are paid (Umhlanga paid part). Mokoena Retail has an accountant, Priya Naidoo (`books@mokoenaretail.co.za`), and HQ has one too (`accounts@herbalholland.co.za`).

Appendices

A Demo logins and PINs · **B** The catalogue import columns · **C** Glossary · **D** What's still to be decided.

IN THIS CHAPTER

A Demo logins and PINs

B The catalogue import columns

C Glossary

D What's still to be decided

A Demo logins and PINs

Only with `DEMO_MODE=true`. Password for every seeded person: `holland`.

Role	Email	Lands on
HQ administrator	hq@herbalholland.co.za	HQ console (network, catalogue, marketing, compliance)
Area manager	area.gpn@herbalholland.co.za	HQ console, Tshwane & North region
Franchise owner	thabo@mokoenaretail.co.za	All my stores: Mokoena Retail (Hatfield and Brooklyn)
Accountant (Mokoena Retail)	books@mokoenaretail.co.za	Mokoena Retail's books
Accountant (HQ)	accounts@herbalholland.co.za	Herbal Holland's books
Store manager (and responsible dispenser)	manager.pta01@herbalholland.co.za	Hatfield's back office
Trade buyer (owner of Greenleaf Pharmacy, TA-000001, on account)	trade@greenleafpharmacy.co.za	The trade portal, with no password: the 6-digit code is shown on screen in demo mode (`/trade/login`)

Till: open `/pos`, use one-click pairing to a store, then PIN `1111` (a manager who is also a dispenser), `2222` (a dispenser), `3333` or `4444` (cashiers). Shop: `/`, where the SMS code is shown on screen. Direct sign-in: `/api/auth/demo?email=hq@herbalholland.co.za&next=/hq`. Reseed the demo with `npm run db:seed` (it truncates every table; `SEED_STORES=1000 SEED_DAYS=30` makes a production-sized copy for load tests).

B The catalogue import columns

HQ › Catalogue › Import › **Download the template**. One row per variant; rows with the same product name are one product. Column names are matched loosely (aliases in brackets); values are checked against the class's rules before anything is written.

Column	Level	Required	Meaning
sku	variant	Yes	Letters, digits and dashes (3–32). A SKU already in the catalogue is updated; a new one is created
product (product_name, name)	product	Yes	Product name; rows with the same name are one product, one row per size or option
variant (size, variant_name, option)	variant	Yes	Size or option, e.g. 30 ml or One size
category	product	Yes	An existing category, by name; the import never creates one
class (reg_class)	product	Yes	THC, CBD, CBD_FOOD, CBD_TOPICAL, HEMP, SUPPLEMENT, ACCESSORY, APPAREL, GROW
rrp_incl_vat (rrp, price, retail_price)	variant	Yes	Recommended retail price in rand, VAT included, e.g. 349.00
wholesale_excl_vat (wholesale)	variant	Yes	Price to stores in rand, VAT excluded
cost_excl_vat (cost, landed_cost)	variant	Yes	HQ landed cost in rand, VAT excluded
status	product		DRAFT, ACTIVE or ARCHIVED; new products start in draft
description	product		Needed for a new product: at least a sentence, because it appears on the product page
tagline	product		One warm line, no medical claims
brand	product		Herbal Holland unless it's a partner's brand
line	product		The product line (e.g. Heritage, House, Reserve)
strain	product		INDICA, SATIVA, HYBRID, CBD (plants only)
thc_min_pct, thc_max_pct	product		Typical and maximum THC, % (CBD classes: at most 0.001)
cbd_min_pct, cbd_max_pct	product		Typical and maximum CBD, %
cbd_mg_per_pack	product		CBD in one pack, whole mg (CBD supplements: at most 600)
cbd_mg_per_day	product		CBD supplements: maximum daily dose, mg (at most 20)
natural_cbd	product		CBD food & drink: yes when it holds only the CBD naturally in its ingredients
net_content, net_unit	product		One pack as on the label, and g or ml (food, drink, supplements, skin care)
ingredients	product		As on the label, in descending order of weight
allergens	product		R146 allergens separated by |: gluten, crustaceans, molluscs, eggs, fish, milk, peanuts, soybeans, tree_nuts, none
claims	product		Approved low-risk claims, separated by |
legal_basis	product		Defaults to the class's legal basis
effects, flavours	product		Moods or effects, and flavours, separated by | (e.g. calm|focus)
lineage, origin, heritage	product		Plants: parent strains; where it's from; yes for an African landrace story
featured	product		yes to feature it in the shop and the app
tobacco_related	product		yes for pipes, water-pipes, papers and vapes (Tobacco Bill)
barcode (ean, gtin)	variant		EAN or UPC, 8–14 digits (format the column as text)
image_urls (images, photos, image_url)	product		Product photos: https:// web addresses separated by |, up to 6 per product, fetched and kept at import (JPG, PNG or WebP); the first is the main picture. Without them the shop draws the product
grams	variant		Dried-flower equivalent grams, for licensed products' limits
merch_partner_code (pod_sku)	variant		Made to order: the merch partner's product code (no stock)
active	variant		no stops it being ordered or sold (new variants: yes)
stock (opening_stock, qty, quantity)	stock		Opening stock, in units, at the location you choose
batch (batch_code, lot)	stock		Batch or lot code on the packs (default: the SKU with -OPEN)
expires (expiry, expiry_date, best_before)	stock		The batch's expiry date, e.g. 2027-03-31

C Glossary

Adult-use mode The HQ switch for a future commercial regime: licensed products to verified adults within a daily limit. Off by default (medical mode).

Authorised dispenser	A staff member (usually the responsible pharmacist) who may complete sales of licensed medicines; ticked by the owner in Store › Team.
Batch / lot	A production lot with its own code, expiry and certificate of analysis; stock is kept and sold per batch.
Case pack	The number of units a trade line is sold in (six oils, twelve coffees, twenty-four papers; one for grow equipment and apparel). Trade orders are placed in whole cases; the till sells any quantity.
Cash-up	A closed till shift (float, cash taken, counted, variance): the basis for banking.
COA	Certificate of analysis: the laboratory's results for a batch, public at /batch/<code> and as a panel on the product page.
Collection code	The 6-digit code (and QR) a member shows to collect an online order; verified at handover with an ID check.
Credit note	A negative entry on a trade account's ledger: a return or price correction HQ agreed (numbered TC-000001…), or the on-account part of a refunded trade sale (numbered as the refund). It settles the invoice it names first.
Customer display	A second screen (/pos/display) that mirrors the till's sale for the member being served: lines, deals, points, the total, the thank-you.
DC	Distribution centre: a warehouse store that supplies retail stores and ships courier orders.
Drop	A limited, members-only release with tier early access and a per-member limit. Never medicines.
FEFO / FIFO	First expiry, first out (how stock is picked); first in, first out (how cost is taken).
Founding Member	One of the first members on the launch list, with a numbered card and a tier floor for a set period.
Gift voucher	Prepaid value (R200, R500 or R1,000) with a code, valid three years, redeemed online in the bag or at checkout and at the till; money, never a promotion.
Handling fee	What a trade account pays (R75 ex VAT by default) for a click & collect order a store packs and hands over; it is part of the sale posted at that store.
Incentive-excluded	Classes that get no promotion, member price, markdown, points, deal, gift, drop or commission (Medicines Act s18A): licensed products in medical mode and the "no incentives" classes.
Instant saving / member price	The tier percentage (or a member price list) applied the moment a member is identified, at the till and online.
Member advisor	The role for staff at the till who serve members.
Members only	The rule that every sale needs a registered member.
My Deals	A weekly personal offer on a member's favourite eligible product, HQ-funded and credited to the store.
Network trading	Stores buying and selling surplus stock with each other, cleared by HQ on the statement.
On account	A trade account's credit terms: a sale or order is invoiced on HQ's trade ledger and falls due after the account's payment days, within its credit limit. Never money at the time of sale.
Opening checklist	The tasks HQ ticks off before a store opens (legal, set-up, people, launch), seeded when the store is onboarded, with due dates counted back from the opening day.
Par / reorder point	Order up to par when stock is at or below the reorder point; both set per item per store.
Patient authorisation	A SAHPRA Section 21 authorisation registered against a member, with a monthly quantity.
Reorder reminder	A message a member asked for, every 14–90 days, with a one-tap link that puts a consumable in their bag; nothing is charged.
Rollups	Daily per-store and per-variant totals updated with every sale, so network reports never scan raw sales.
RRP	Recommended retail price set by HQ, VAT included; franchisees set their own shelf price.
Shelf price	A store's own price for its tills.
Statement	The monthly franchise statement between HQ and a store, netted to one amount.
Tier	Seed, Sprout, Bloom or Harvest, set by rolling 12-month spend, each with an instant saving.
Today list	The store's to-do list at the top of the overview (orders, alerts, cash, updates, expiring lots, low stock, counts, authorisations, invoices), most urgent first.
Trade account	A business approved to buy at trade prices (TA-000001…): its legal details for the tax invoice, the ranges it may buy, prepaid or on-account terms, a credit limit and payment days, its buyers and its ledger.
Trade order	An order placed in the trade portal (TO-000001…): whole cases at ex-VAT prices, by courier from the DC or click & collect at a store, paid by EFT against a pro forma or on account; invoiced TI-000001… when it ships or is collected.
Training mode	The till on a sandbox: practice sales numbered TRAINING 0001…, nothing posted, printed for real, moved or awarded; started and ended with a manager's PIN.
Z-report / X-report	The shift's closing report / the live report during the shift.

D What's still to be decided

Open items from the launch checklist and from writing this guide, for the owner and counsel:

Decision	Where it lands
Peach Payments' written approval	Online payments stay simulated (or the demo pay page) until Peach approves Vantax (Pty) Ltd's product mix in writing; then the sandbox test, the live keys and the smoke test. Yoco's approval per store account for the card machines.
Hosting	The runbook assumes our own server in South Africa behind a Cloudflare Tunnel with R2 for files; the server, backups, monitoring and on-call rota still need to be provisioned and a restore test done.
Store details	Addresses, phone numbers, hours and the SAHPRA licence references for each store: in HQ › Stores for the platform, and in `facts.ts` for herbalholland.com (Pietermaritzburg and Umhlanga have no address or hours on the site yet).
Photos	Store photographs for the site (stores are drawn until then) and product photography for search rich results (product art is generated).
Pharmacist reviewer	A registered person to review the Learn guides; set `CONTENT_REVIEWER` only when one has.
Counsel sign-off	Medical-mode flows, the class × channel matrix, the claims library, the membership terms (directors' names), the returns policy's ECTA s42 exclusions and failed-delivery terms, whether CBD supplements may carry incentives, the legal basis for CBD skin care, whether collagen and protein are foodstuffs, and the CBD food labels.
Founding Members	The numbers are settled: the platform's defaults are the site's 2,026 places and 14 months. Only the closing date is still to be set in HQ › Founding Members (the settings lock once numbers are assigned).
Vouchers at the till	Done: the till takes gift vouchers as a tender (typed or scanned, online only, never on a queued sale) and refunds return the voucher part to the voucher; the gift page, the voucher email and the SMS say "online or in store". Nothing left to decide.
Trade terms and bank details	The trade terms at `/trade/terms` are placeholder wording marked for counsel (the version each applicant accepted, `trade-1`, is recorded on the account); the bank account EFT pro formas quote (HQ › Settings › Trade), before the first trade order (the demo prints "Demo Bank · 000 000 0000"); and whether CBD supplements may be traded to pharmacies on these terms.

Decision	Where it lands
Trade licence rules	The licences each kind of trade customer must hold (`src/lib/trade-licences.ts` , chapter 7): counsel to confirm the matrix (notably that a SARS tax registration is enough for a sole-proprietor shop or online shop, that distributors and other businesses must be registered companies, that a reseller of CBD supplements other than a distributor needs no SAHPRA licence, and that a certificate of acceptability is the right test for CBD food and drink), and the trade team to agree how it checks each register (SAPC, BHF PCNS, CIPC, SARS, SAHPRA, the municipality).
Company facts	Vantax (Pty) Ltd's registration and VAT numbers, address and phone for the site's company details and the ECTA s43 information; the Information Officer's registration number.
Providers	SMSPortal and SMTP accounts; VAPID keys; the Apple Wallet pass certificate and the Google Wallet issuer account; Postiz with the social accounts (Meta app, Bluesky, Telegram) and the WhatsApp Channel; the courier account; NCC direct-marketing registration and the first registry import.
Social profiles	The brand's profile URLs for `ORG_SAME_AS` and `facts.ts` ; Google Business Profiles per store.

Herbal Holland platform: complete system guide, version 1.4, 7 October 2026. Written from the code at that date; the platform keeps changing, so check the screen in front of you when it differs from this page.
